12 February 2016

Friday's Flash news (unedited updated copy)

Hold your buying positions in markets because it held 1812 lower side level mentioned in book which gives us hope that S&P may rebound strongly

Dear Members,

I don't have any energy left due to thinking about the current market conditions and I was not able to sleep all night for the first time because I have been recommending buying S&P around 1864 level since the last few weeks and the markets are not behaving well at this stage. Though we haven't lost even 1% faith in our theory because over the last two decades our theory has guided us amazingly well with a great amount of accuracy. **S&P traded below 1864 and touched this year's lower side target of 1812 and gold touched \$1250 our higher side target of 2016** (which are mentioned in our book **2016 Financial Predictions**). We are still holding our medium and longer term target for S&P (by the end of this year 2475 and 3200 in the next year 2017) and the rest of the global markets will move much higher from current levels, so let see the markets rebound from here or not. If the market doesn't rebound and gold doesn't fall from here, then this may dent our image which we gained over the last thirty years predicting the market. Yesterday S&P touched 1802 level and gold went above \$1250 but they both reversed a little by the end of the day. We still don't believe that S&P will remain below 1864 and gold above \$1250 so trade carefully.

You must go through our new book "**2016 Financial Predictions**" one more time because the lower side in most of the indexes have been achieved; the higher side prices of \$1250 in gold has been achieved; lower side price target in oil \$27.71 has been achieved yesterday. According to use the risk of selling in the metals at these levels is very minimal. The risk of buying the equity markets here is almost zero and the risk of buying oil at current level is also zero. There is no doubt that we mentioned in our book that the market will remain very volatile with 5% moves in the month of February. The market could move up and down very aggressively and we are experiencing this. Anyways, the market moved down last week but remember that just as it can move down, the market can also move up aggressively without giving anyone notice or buying time.

My problem is that I trust the astro cycles 100%, they are not showing that the market will fall in medium and longer term. The bullish astro indicators are intact so how can I advise selling everything, and getting out when I see S&P going to a historic high in 2016. Yes, S&P broke 1864 on

down side, which is negative news but the **current time is a volatile time, it is not a bear market**, and we have mentioned the same thing in our book.

On the other hand, gold moved sharply higher and it achieved the higher side target of \$1250 that we mentioned in our book ""2016 Financial Predictions". We don't see it remaining above \$1250. In 2016 metal stocks look like a good buy, but not at this stage. This is the time to book profit and get out 100%.

The Astro indicators are indicating a 91-day rally starting in all the major markets from the 3rd of March 2016, but wait for our confirmation in next week Tuesday. Stay long in the market.

- In 2001 we predicted buying Euro and all the other currencies when there was a bear trend, with a target of 40% higher. We had the same prediction for commodities moving higher in multi-folds for the medium and longer term.
- In 2007 we warned of a crash in the housing market, Banking and financial institutions in the USA, and that a global crisis would hit that would be worse than 1929. We also predicted a crash in commodity prices and a fall in other asset classes. Energy traders started laughing when we predicted oil moving towards \$30.00 when it was trading between \$118.00/138.00.
- In February 2009, we predicted the bottoming out of all the major markets, and then moving up in multi folds. We predicted S&P moving towards 3200, Nifty 12500 or higher and most of the markets moving aggressively higher.
- In 2012/13/14 we kept recommending buying USD against most of the currencies and getting out from all major holdings.
- Anyways, I leave all the decisions to you. Please make short term trades carefully; and if you really want to make money than please focus on the medium and longer term.

The rest of commodities and currencies performed as predicted. Yesterday all these recommended stocks performed well. **TSLA** missed earnings but this is the time to buy on weakness, so don't short this stock. **AMZN** just announced a \$5 billion buy back. **CSCO** announced great earnings, returning capital and buy back. **WFM** Whole Food also announced earning beating by \$0.06. Anyways, it is time to buy the market or quality stocks. It is not the time to be afraid and stay away so plan your investments for the medium and longer term.

Yesterday in the stock report we recommended buying **CSCO, CRAY, WFM**. On the other hand we recommended not to short **TSLA** Tesla.

This is what we mentioned yesterday on Tuesday: *On Tuesday globally market traded volatile but holding lower side levels very well which indicates that market will hold lower side value and will start gaining from current levels. We recommend holding buying positions here, let's see tomorrow S&P moves above 1864 level or not, we see stability coming in market from Wednesday which is very important than positivity. Many high momentum and growth stocks went sharply lower but most of quality stocks will turn around sharply higher once market start moving higher which will be case from late Thursday.*

Our view is turning more bullish for emerging markets and emerging market currencies from here onwards. Many great stocks are trading at great values so make a list and start accumulating some. On Friday evening I looked like a fool because I still recommended buying in a falling market, and

holding investments till mid-2017. I still keeping my prediction of S&P moving towards 2475 to 2550 by the end of this year. Of course people will call me a fool, but time will provide the answer of whether the astro indicators provided us with the correct guidance or not. It is understandable that everyone will remain a little sceptical about our view on market at this stage.

33% discount offer will end Monday so extend your services if you wish to, read in detail about.

Here below trading strategy and ranges for Friday:

GOLD/SILVER/BASE METALS

Gold, silver, platinum and palladium achieved a top on Thursday. We mentioned in our book that we don't see gold going above \$1250 in 2016, and we are still holding the same predictions. Gold will not be able to close above \$1250 for the next three days.

Metal stocks traded positively. Get out of metals 100% if you have any positions. Buy copper on Friday and sell the rest of the precious metals on Friday around the higher sides. Don't hold even one contract in gold because we are not changing our predictions of a bear market in gold from here. We never change our prediction because of any short term move in the market.

From 2001 to 2011 our bullish view was intact, around \$1600 we recommended to get out from gold as we predicted bear cycle in precious metals, base metals and metal stocks. Still that bear cycle hasn't ended even though in the last one month prices have rebounded sharply but this just rising pattern in falling longer term prices according to our astro cycle and that's the reason we are recommending selling gold \$1250. We still see gold and silver may make new lows in 2016 because higher side prices have got achieved what we mentioned in our book "**2016 Financial Predictions**" on page 79. Next bullish cycle in gold will start around 2025 so now metal traders should remain short term traders rather than holding positions for the longer term. Metals will start falling sharply in term of emerging market currencies so sell gold in Rupee term at around 29000 which target of 18000 in the next 18 months.

Metal stocks will perform far better compare to metals in 2016.

This is what we mentioned Monday, 8 February 2016: *In 2016, maximum higher side for gold will be \$1250 and lower side \$988 to \$880, and silver \$975 level on lower sides and maximum higher side \$16.35. After five years, gold's time cycle is changing against most of the emerging market currencies so it will start losing value against Rupee, Real, Peso, Rand, Rubble and many other currencies. Gold may lose 20 to 30% value against these currencies. If you are invested in gold in these currency terms, you should get out. This phenomenon will happen for the first time in many investors lives so traders in these countries have to be very careful. Sell gold and buy these emerging market currencies.*

Here is Friday's range: **(March 2016 contract):**

GOLD: \$1250.95 to \$1231.00 Time to sell aggressive

SILVER: \$15.91 TO \$15.48 Time to sell aggressive

COPPER: \$203.00 TO \$198.00

PALLADIUM: \$527.00 TO \$512.00 Time to sell

PLATINUM: \$969.00 TO \$947.00 Time to sell

INDEXES

On Thursday the markets move gave me a sleepless night as I was just concerned about all of our members. Last week NASDAQ rallied and closed in the green but the rest of indexes closed negative. Indian and European markets lost big value. Emerging markets and Japan also lost value.

As I mentioned that I don't change my predictions overnight due to the markets behavior pattern. If we predicted that S&P to rise up to 3200 then there has to be a reason behind it. If we changed our prediction because the market was acting a little volatile, then this would not be the wave of nature cycle/astro cycle.

S&P did breach 1864 level, but at the same time the current cycle is very volatile and we mentioned this in our book. This volatile cycle to end on the 3rd of March, but surely I would like to see S&P moving above 1864 on Friday because we are expecting a very positive trend on Friday and onwards.

We are not changing any of our predictions for the market. I will wait till Tuesday before I decide to write a final note, so until then, hold positions in the market without making any trades. We still believe S&P will reach 1938 level during next week with an aggressive move. Read the third cycle of S&P on page number 42 of our book "2016 Financial Predictions".

Note – If this market turns around then it will move so aggressively that most of the traders won't be able to catch it. Buying at the lower side is recommended in the market because the market is forming a bottom (**Markets are in a volatile mode, not in bear market cycle**). We still believe that the astro cycles are 100% accurate theory to guide you on the markets trend because they represent the oncoming behavior pattern of the market and investors. The rest of the technical data and fundamentals play a small role for the short term so we still trust our prediction that the market will rebound strongly from here. If it does not then surely our image which we built over the last 30 years.

Past important predictions and levels for indexes of daily Flashnews are at end of this letter.

Here are Friday's ranges: (March 2016 contracts)

HONG KONG (cash) – 18797 to 18421

NIKKEI – 15555 TO 14951

NIFTY S&P (Spot) – 7035 to 6935 Buy at lower sides

CAC – 3948 TO 3851

DAX – 8832 TO 8675 Buy at lower sides

DEX EURO STOXX – 2735 – 2653

FTSE – 5552 TO 5435

FTSE/JSE (Cash) – 42198 to 41608

S&P e-mini – 1848.25 TO 1809.25 Buy at lower sides

NASDAQ 100 e-mini – 4018.00 TO 3928.00 Buy at lower sides

RUSSELL e-mini – 970.00 TO 938.00 Buy at lower side

DOW e-mini – 15790 TO 15457 Buy at lower sides

TREASURY BOND

On Wednesday Thirty Year Bond traded higher and now it looks like Bond prices are very close to the top. On Friday on the higher side one can sell or wait for Bond to move to 172 levels. This is what we mentioned yesterday: Thirty year may move higher, and it may move towards 172 level. There is no need to make any trade. At this stage stay on the sidelines without doing anything. Last year Bond collapsed from 172 to 146, so if Bond touches 172 then sell it without looking into yield and rates. Short term traders can trade in and out.

One can hold longer term positions in TMV, TTT and TBT, but don't add any new positions.

A few past important predictions and levels for Bonds of daily Flashnews are at end of this letter.

Friday's trading range (March 2015 contract):

TREASURY BOND – 169-18 TO 167-21

SOFT COMMODITIES

On Thursday most of the softs traded negatively and the same kind of trend is indicated on Friday so stay away from any buying, but coffee is coming in our buying list on the lower side of Friday or Monday. Next week we may recommend buying cotton and sugar. Avoid lumber, cocoa and Orange Juice.

This is what we mentioned yesterday: Buy coffee around \$111.00 if it comes down there. Avoid the rest of the softs. Avoid any news trade in sugar, but get ready to buy it if it falls below \$12.80 levels. Get ready to allocate some money to softs on Friday, we recommend buying softs on Friday before the stocks close (buy coffee and cotton). Coffee will be the only good buy after the 14th of February so stay away. We are sure that those who bought around the lower levels must have booked profit. Sugar buying was recommended last week on Thursday around \$12.66, and if it goes there then you must take some positions on Monday. Avoid cocoa, lumber, cotton and Orange juice or just trade in and out on Monday.

Remember - Coffee will struggle to close above \$128.00 and \$118.00. The maximum down side is \$112.00 or \$109. One can start accumulating coffee if it closes above \$118.00 for the three days. Cotton will struggle to close above \$64.88, and sugar \$15.45. On the down side cotton will hold \$60.28 and sugar \$12.78 to \$12.50. At this stage we not recommending any buying in cocoa, orange juice, lumber.

Friday's trading range: (March 2016 Contract)

COFFEE: \$114.68 TO \$111.15 Buy

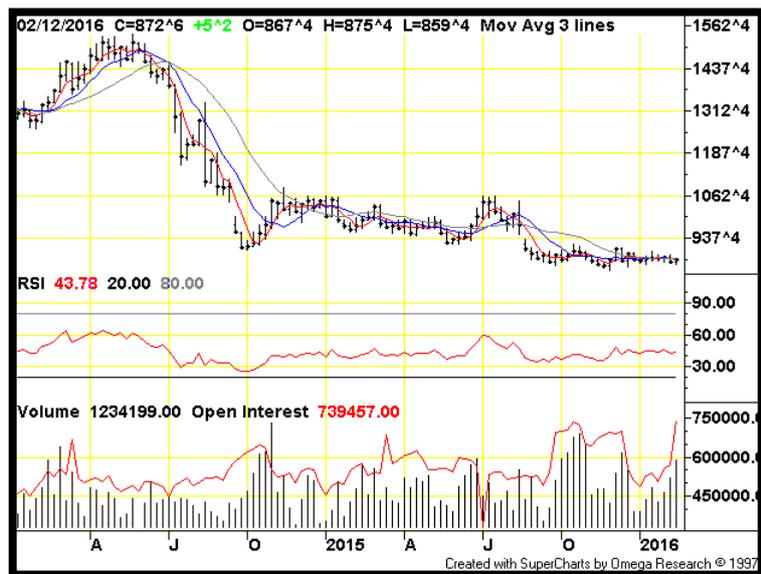

COTTON: \$58.79 TO \$57.63 Avoid

SUGAR: \$13.33 TO \$12.80 avoid

GRAINS

On Thursday soy and soy oil traded positively as predicted. Buy more soy oil on Friday. Also trade in and out in the rest of the grains by buying around the lower ranges. This is what we mentioned yesterday: On Wednesday most of the grains traded mixed or in a very narrow range. Trading in and out in will be the best strategy in grains on Thursday and hold some positions or you can buy today around the lows. Stay long in soy oil as recommended.

Two year back selling recommendations in Soy at \$1550 with target of \$845 have provided great returns. Now we are predicting end of bear market in all major grains.

This is what we mentioned yesterday: *Tuesday most of grains traded mix to bit negative, but one can buy SOY OIL on Wednesday and avoid any major trades in grains on Wednesday after grains traded negative on Mondays because it was positive day but let me tell you that grains buying is far better than metals and energy for medium and longer term.*

Down side risk is 1% and higher side me may make 5% or higher, we shall start buying some positions from Friday, but one can add small positions today around lower sides.

The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see that 5-7% positive moves. We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.

Friday's trading range (March 2016 contracts):

CORN: \$364.00 TO \$359.00

WHEAT: \$461.00 TO \$451.00

SOY: \$884.00 TO \$864.00 BUY

SOY MEAL: \$266.00 TO \$261.05

SOY OIL: \$31.27 TO \$31.24

ENERGY

On Thursday the energy market gained value in the last hour of trading after the news of the UAE energy minister planning to meet OPEC to cut production came. Energy stocks and oil prices recovered. On Friday we see a positive trend to continue. Oil will never close below \$27.71 (April Contract) level for more than three days in a row so watch this prediction closely. Our higher side target is \$35.18 in coming few weeks.

Hold long positions in oil and energy stocks. Hold longs in RB Gas and Heating oil. Avoid natural gas as it will trade directionless.

In 2014 June we recommended selling around \$98.55 levels with target of \$30.00. Our lower side target got fulfilled so get out from any shorts in energy stocks and oil.

This is what we mentioned yesterday: *On Thursday we are still recommending buying RB Gas*

and ERX. Also one can take positions in oil at lower side levels at we don't see oil closing below 27.71 for more than three trading sessions. ERX is ready to move 30% higher from current levels so great time to buy.

At predicted oil failed to close above \$35.00 and down side \$27.72 will hold so great time to buy and this range will remain there for few months. Remain a short term trader.

This is what we mentioned 2 February: *Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well.*

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring positions in natural gas around \$1.92 and below, or whatever the low of Thursday is. Energy stocks may rebound strongly from late Thursday.

Few past important predictions and levels for energy of daily Flashnews are at end of this letter.

Friday's trading range (All April 2016 contracts):

OIL: \$30.75 to \$29.19 April Buy

NATURAL GAS: \$2.09 to \$1.95

HEATING OIL: \$1.0125 TO 0.9618 Buy

RB GAS: \$1.0280 TO \$0.9555 Buy

CURRENCIES

On Friday Japanese Yen moved another 100 pips higher. It created some panic but we warn not to buy Yen. Pound and other side currencies lost value. Euro and Swiss Franc gained value and may gain some more value. USD index will trade a bit lower on Friday and may test 95.00 level as predicted.

Emerging market currencies will remain in a mixed trend. They are trading under huge volatility but surely they are warming up for a major move in the coming time. New Zealand dollar gained value on Thursday and the positivity will continue on Friday as well. USD may hold some value around 95.00 levels.

This is what we mentioned yesterday: *Selling is recommending in Japanese Yen at higher levels to 0.8977 level is selling level in Yen. Pound and most of currencies can gain some value but stay away from buying in Pound. Australian dollar, Swiss Franc and Canadian dollar looks negative so any further rise can be taken as selling opportunity.*

Watch 1.1478 level of Euro, if Euro closes above 1.1478 level for three days than it can achieve 1.1755 levels. We don't recommend any buying in dollar index but it can bounce back from 95.00 level so watch this level closely.

*Hold buying positions in emerging market currencies and buy New Zealand dollar. Hold sell in Swiss Franc. Don't short any currency at this stage because our view on USD is still weaker. Emerging markets currencies are in buying list so add more positions in **Rand, Real, Rupee, Peso, Ruble and Israeli Shekel.***

Few past important predictions and levels for currencies of daily Flashnews are at end of this letter.

Friday's trading range: (March future contract)

DOLLAR INDEX – 96.00 to 94.93

AUSTRALIAN DOLLAR – 0.7181 to 0.7007 Sell on higher side

CANADIAN DOLLAR – 0.7215 to 0.7130 Sell on higher side

BRITISH POUND – 1.4480 to 1.4379 Sell

EURO – 1.1418 to 1.1282

JAPANESE YEN – 0.9017 to 0.8832 **Sell**

SWISS FRANC – 1.0368 to 1.0239 Sell

NEWZ. Dollar – 0.6774 to 0.6665 **Buy**

RUPPEE – 68.59 to 67.99 (Spot) Buy Rupee or sell dollar around higher

RAND – 15.90 to 15.60 (Spot)

Discount offer: 33% on all major subscriptions

As usual of every year in February we came out discount offer and this year also we are announcing 33% extra time offer on all major subscriptions and on Indian market we have 39% extra time on subscriptions. Current subscriber can take advantage of this offer and extend their services.

This offer will work like all previous offers; subscriber will get 33% extra time in their services:

- **If you subscribe for 3 months than you will get 1 month extra so you will get 4 months' services**
- **If you subscribe for 6 months than you will get 2 months extra so you will get 8 months' of services**
- **If you subscribe for 12 months than you will get 4 months extra so you will get 16 months of services**

This offer is not valid on services like Personal Clients, Personal consultations, Corporates client's and books. Don't subscribe for personal clients as we are not anymore new personal client until July 2016.

11 February 2016, 03.00 PM, Santa Barbara

Some past important notes and important ranges from our daily flashnews:

From few Flashnews important commentary:

This is what we mentioned 18 Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.

After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.

There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21st of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.

Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts. The worst case scenario is almost over, and on Monday most of the markets will trade uncertain or will open gap down but won't break their lows. On Monday the USA market will remain closed and on Tuesday the USA market will open.

Important note – In the last 20 years ever since I started representing my view, I haven't seen many investors entering the market at the bottom or selling positions on top. If we see that this is around the bottom, then investors should buy positions here rather than selling everything and getting out. I haven't sold any positions in the stocks I bought last week, and I don't plan to sell them till mid-2017. In the last two weeks my account value has also come down but I am sure it will move up back. The same thing happened when the markets crashed in Augusts and September and the account value of many went down but they bounced back from October.

In the last 16 months' the market hasn't done anything but the time is coming back for us to make money and the market will now start walking with us. Have some patience for the next few days.

Iran Nuclear deal and sections were lifted during this weekend may provide great opportunity in buying oil around lower level on Monday and Tuesday. This is good for world economy as there is one economy now open and corporates are ready to enter Iran. This could be bad news for Saudi and many middle-east oil rich nations because their premium and supremacy will go away.

Monday will be a holiday and we are excited to announce that our book "2016 Financial Predictions" will be out on Monday 10.27 PM Santa Barbara time. This will be a great gift for you and your friends who are looking for the right investment and trading strategy.

Immediately after job data we mentioned this on Friday, 2 October: Job data unexpectedly came out negative and market came down sharply lower but these lower prices may not able to remain for more than few hours or few days so time to acquire more positions here in USA market. This week on Monday S&P made a low of 1863 level and right now it is trading at 1886 and this level should be held and it won't trade below 1886 for more than three days.

In 2011 mid-October S&P bottomed out and moved 30% in the 5 months, and every year there on S&P always bottomed out in mid-October and same we are expecting this year to happen as we have been predicting that market should bottom out by 10 or 16 October 2015. We are still expecting huge rally in first quarter of 2016. We are expecting S&P to gain 20% by 2016 March.

Thanks & God Bless, Mahendra Sharma, 7.00 AM Santa Barbara, 2 Oct 2015, 5.45 AM

*This is what we mentioned 2 September: Watch **UVXY** – ultra volatile etf went sharply higher in the month of Mid-August from \$25.00 to \$86.00. Many bear etfs like **RUSS and YANG** are moving up crazily, shorts in these etfs shall provide year results in the next few months.*

Metal:

These levels we mentioned on last week Monday and Wednesday is working very well so far. This is what we mentioned 3 October: **Tuesday one should trade in and out in metals, any rise in Palladium should be taken as selling opportunity, and Palladium won't go above \$720 levels. Get out from metals stocks once HUI reaches to 125 level. Maximum higher side for silver is \$15.95 and gold \$1168 and \$1184 looks difficult to move higher in 2015.**

August note: Gold came down from \$1935 TO \$1073, and up 7% from lows but must remember that it is in bear astro cycle.

INDEXES:

This is what we mentioned on Tuesday 25 January: *Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.*

All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.

Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.

This is what we mentioned 18 Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

Now we still don't see any major trend changing pattern even though the market has breached all technical support charts according to most of the analysts. We believe that even the technical charts can turn positive if the market rallies for two weeks. We watch the astro indicators closely so we would like to stand with our reading of our theory or what we have been good at for the last thirty years.

S&P broke 1881, and also went below 1862 level, in fact it made a low of 1848 level and closed at 1875 level which gave many relief. Anyways, those who accumulated stocks and indexes on Friday will be rewarded big because this fall is an intermediate fall not a bear trend. This market is in fear, and no one knows what will happen, yet everyone continues to shout loudly and run here and there, like the people in the classic Godzilla movies. If you ask anyone why they are running away, no one has an answer.

There is no doubt that on Monday when most of the global markets open there will be a lot of fear. Investors won't like to open their trading accounts because of fear, and the fact that they don't want to see a sharp decline in their account value, but believe me this market is providing you with one of the best buying opportunities so don't miss it Monday and Tuesday any below 1864 levels.

This alert was sent yesterday at 8.30 AM on 13 Jan 2016: *Oil is trading around \$30.38, S&P came to 1886, and FANGAM (Facebook, Amazon, Netflix, Google, Apple and MSFT) are trading lower. Earnings in tech stocks are on the way from the Third week of January. I surely recommend betting on Google, Apple, Microsoft, Netflix and Amazon.*

*Oil will hold value, and those who bought oil yesterday can hold positions. S&P may retest 1881 level but you don't want to wait until that price hits. If you ask me the worst case scenario, then it may move towards 1862 but the chances of that happening is very minimum. Currently traders are worried about the technical because the charts turned very ugly and traders, funds and Institutions sell aggressively when charts are negative. However, our astro indicators for the markets are turning positive from the 19 January of so from **now to the 19th of January** will be a great time to acquire positions if you are planning to buy something for the next five weeks or more.*

Here are a few trades that look very attractive:

AMZN: 26 Feb call, strike price \$620 – currently trading at \$23.00

GOOGL: 26 Feb call, strike price \$750 – currently trading at \$23.50

MSFT: 26 Feb call, strike price \$52 – currently trading at \$2.16

APPL: 26 Feb call, strike price \$100 – currently trading at \$3.50

This is what we mentioned last 25 Oct, Monday: ***On the higher side S&P has achieved our predicted short term level of 2068 and it may struggle to move above 2088, which is something that we have emphasized since the last quarter of 2014. Book some profit in the market around 2088.***

This is what we mentioned on 1 October, Thursday: ***On Wednesday most of markets traded very positive throughout the day without any corrections and volume was also very decent. S&P held 1863 level very well, and trading above 1928 will open avenue to reach 1988 in coming few weeks.***

Thirty Year Bond

This is what we mentioned on 6 October: *Most of you are aware that our Thirty Year Bond selling recommendations are for the medium and longer term. In the last six months a few selling opportunities came at 172 and 162, and we took advantage of selling and did very well. We have been recommending buying TMV but most of you must remember that our recommendations is only for a two year time horizon. Don't make any aggressive short term bets on Thirty Year Bond or TMV.*

Thirty year won't go above 160 level. Right you can accumulate March 2016 put options. We are sure you must be holding positions in TMV and this trade is for the longer term.

This is what we mentioned on 26 June, Friday: ***Wednesday Thirty-year bond lost more value, June contract came down to 151 so it lost almost 21 points from 172. Our predictions of Thirty-year bond topping out proven best call and we also mentioned that fortune could be made and we sure many of you must have done amazingly well in this trade in the last three months.***

This is what we mentioned on the 2nd of Feb: *Thirty Year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 172 (June contract) or the below mentioned higher side ranges.*

Grains

This is what we mentioned on 14 January: Must buy grains because we see big weather related issues coming from the end of January which could bring disasters to many places on this planet, and any crop damaging news can push prices higher. We have been watching our grains accuracy level very closely, and at this stage our accuracy levels are very high so take advantage of our accuracy level. Trade in and out in wheat and corn, but soy products should be in your buying list on Monday.

This is what we mentioned on last week 18 December: *Grains are our favorite in 2016. Thursday one can trade in and out. Down side is very limited from current levels so take some buying positions around the below mentioned levels in most of the grains, which may provide you with good returns within the next ten days.*

*The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see that 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.***

This is what we mentioned on 28 July: ***Time to build long positive so don't miss this opportunity. Last week corn closed around \$375, wheat \$477 and \$880, these are great level to cover 100% shorts in grains.***

Energy:

This is what we mentioned last week Monday, 21 December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on 27 August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

This is what we mentioned on the 27th of April 2015: ***Adopt trading in and out strategy in energy, but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.*** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we mentioned on last week Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned for Tuesday: *Monday most of currencies traded negative against USD. South African Rand is in free fall, and many other South American and South East Asian currencies are also falling sharply lower. Israeli Shekel is ready to make new low and may collapse sharply during this week. Those who invested in our recommendations in USD and USD assets class have done amazingly well in the 18 months. In 2013 and 2014 books we strongly predicted that "Those who invest in USD and USD assets class will survive or will able to perform well", we also stated that going against USD would bring disaster path. Who though that these strong words will turn in to reality. Always most of predictions we make are real, we don't predict to attract anyone and neither we falsely claim. If our predictions goes wrong then we accept our error without any ascus.*

On Tuesday most of currencies will have selling pressure but dollar will struggle to remain able 100 market at this stage so watch closely. Tuesday - Avoid any buying in emerging market currencies, sell Euro, Franc, Pound and Yen. Commodity currencies like Australian dollar will gain value on Tuesday so buying is recommended.

There are chances that South African Rand may collapse and may hit 21.00 level so stay away from Rand and other emerging market currencies for the next 10 trading days.

This is what we mentioned on 22 December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23rd of April: *On Wednesday currencies traded both sides, emerging market currencies traded positive. At this stage currency are trading directionless with without any clue so trading in and out will remain best strategy. Thursday profit booking will come in USD but we are not recommending any short in USD but surely one can trade in and out in all major currencies on daily basis, which may provide you great return.*

We don't see Euro holding above 1.1278 and don't see dollar Index going below 95.00 level in medium term so remember these figures.

The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on 15 Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
