Astro combinations showing USA winning over Russia and ISIS

Discount offer will end this week

Dear Members,

Saturn changing will be the most powerful wild card for investors because it is changing house of from Libra to Scorpio and this can push the market through the roof at least for 18 to 21 months in one direction. Once again we see the markets movements can get out of the control of the FED and governments once Saturn moves to Scorpio. The market can ignore every warning from the Fed and the government in 2016. This transit can push Biotech and tech stocks through the roof. Companies like GILD, CELG, AMGN and many other frontline biotech stocks can move towards 300 to 400% higher. We may witness the same kind of trend in the tech sector. **Euphoria is a very mild word, according to me this time period will be like a madness.** This on coming madness may destroy all short seller's accounts, because the moves in stocks and indexes will be like wild fire. I was witnessed of tech bubble from 1997 to 2000, I was investor, astro indicators gave us clear predictions of great tech bubble is coming and early in December 1999 we predicted crash of tech or NASDAQ market. Only predicting about market is one thing but predicting and investing in market make interesting combinations because it is like movie. In 2011 we wrote script for market and market acted or so far movie is going smoothly as written in script.

If you ask us, then we still 100% believe S&P reaching 3200 within two years, and any journey that takes S&P toward 3200 to 3900 which can be still justify but S&P moving from 3900 to 5000 in 30 months from now will be purely a bubble or euphoria. In 2012 we predicted S&P reaching 3200, currently it is around 2000 so still traders can invest and hold positions until it reaches 3200 but once it starts trading above that level one should start reducing exposure of invested capital and if S&P reaches 5000 then you can be 100% out from out market. Even people like Warren Buffet should be selling everything even if he believes in longer term investment strategies. In longer term S&P will rise again but 5000 to 3200 will be sharp fall and many years market will remain sideways. We recommend stay long in call options with

Indexes, and keep adding quality stocks as many quality stocks will keep moving higher in medium and longer term.

I was saying the same thing about the bull market in 2012 and still keep same predictions without changing much. From 2001 to 2004 if you read any article on our website about gold, silver, oil and euro, we targeted gold to reaching \$1600, silver touching \$50, oil hitting \$100 and euro 1.39, when gold was at \$275, silver \$4.50, oil \$17 and euro at 0.83. In our theory once our higher side price targets get achieved then there is a huge risk of a fall starts entering and we have seen this in every case so far in last twenty years. Gold went above \$1600, oil went above \$100, silver touched \$50 and euro went above 1.39, but each market corrected after achieving top after some time and the fall was very nasty in each financial instrument. Our theory is purely divided in nine medium wave cycle with five major wave cycles. These wave cycles are purely divided with astro transits. It is most interesting study.

We would once again like to reiterate a point that we have repeated several times and will say once again here because it is such an important point. **Hate and love. These are most important pillar which helps to balance you in thinking and decision making which helps to become successful in the market and bring peace/happiness in life.** We are not saying that everyone has the problem of loving or hating but it is human nature to have soft corners for certain things. In 2011 when gold was around \$1630, we stated that longer term investors shouldn't buy gold, and we recommended booking profit as we knew that once gold achieved \$1600 buying from that point would be risky. Gold kept moving higher for a few months, and many metal investors were angry with me. Many members discontinued their metal services (including my respected friend James Sinclair, many metal website stopped publishing my articles on metals) but you are all aware that soon after that gold collapsed sharply and it is still trying to find its bottom and metals stocks have taken away a huge amount of wealth from investors because they kept moving down. Same happen when I praise President Obama, few of my Republican members get angry and few of them stopped their services. The point here is that love towards gold made many metals investor's blind and they didn't wanted to listen to the real trend because short term euphoria brings huge excitement. Whenever any market is at the top, most analysts also start moving in that flow and many were talking about gold going towards \$2000, \$3000 and many were even targeting \$5000. In 2001 hardly any media or analysts were covering precious metals.

The same kind of story has kept repeating itself in each and every financial market. It is important that we shouldn't be loving or hating anything in the market, and only then we can become a great trader or investor. It doesn't matter which market we are trading in or which

stock, commodity or currency we are buying or selling; our core principle should be that we are here to grow your capital. **The Sun, Moon, Mars, Mercury, and Jupiter can start playing the most powerful role once we balance love and hate “which plays with emotions”.** Currently I am not loving S&P, NASDAQ, Apple or Microsoft, I am purely predicting the trend, and we will let you know once the rising cycle starts reaching near to the top. You must have noticed that whenever we saw a short term negative trend we warned, recommended avoiding any buying or selling around the higher side.

Though there are many factors which play a key role in success, one of the key factors is the luck factor. We have this chapter on our website <http://www.mahendraprophecy.com/latest-news.php?id=553>. Controlling love and hate will surely boost your luck factor. Many other hidden factors are also there and they play a great role in everyone's success and happiness.

On Friday CNBC, commentators were sarcastically saying that these kinds of moves can only be guided by astrology because technical and fundamentals were not indicating this kind of one sided move in S&P. It is difficult for a common man to predict this kind of move. I thank CNBC contributors to put these words on their live show, it doesn't matter whether they said it in a sarcastic way.

Important note: Scorpio Moon on Monday and Tuesday may bring volatility in the market; on both these days the world events will dominate investor's psychology but hold your investment. Mars is changing, and those who have bit knowledge about the astro cycle must be aware that Mars being close to 28 degrees in Libra before entering Scorpio always brings bring some solid results and after changing the house it brings powerful moves in the market. Commodities, currencies and stocks will have a volatile time but stocks are ready to go crazily higher. We always recommend finishing your pending work or enjoying time with your family during a Scorpio moon so take a break on Monday & Tuesday.

Anyway, I learnt yesterday from my friend Eric's colleague that Einstein believed in astrology and I finding more information on google, and I found this:

Einstein on Astrology:

'Astrology is a science in itself and contains an illuminating body of knowledge. It taught me many things, and I am greatly indebted to it. Geophysical evidence reveals the power of the stars and the planets in relation to the terrestrial. In turn, astrology reinforces this power to some extent. This is why astrology is like a life-giving elixir to mankind.'

Transcript follows. Many thanks to Claire for the image.

Transcript

January 7, 1943

I don't care whether Einstein or any other known personality believed in astro cycles or not, but the Sun, Moon and geo-cosmic events were there before life began on this planet. Facts matter, and I after studying this subject for the last 35 years I can say one thing, that astro cycles are great indicators for events that are actually happening around us and our life simply moves accordingly. Once you are aware of these hidden cycles and try to connect them to things that are happening on an everyday basis, only then can you get a glimpse of the future.

Let see what this week indicates for all major markets from 1-5 Septembers:

GOLD/SILVER/BASE METALS

Last week gold, silver and base metals traded around the same level for the whole week. Metal stocks also traded mixed without any clear direction. Palladium made an all-time high, and remained the best performing metal in the last three years as it never had any major correction. Our buying recommendations in Palladium

have done well in the last four years, and we are still recommending holding positions in it, and we won't be surprised if it reaches \$1000 by the end of this year. SWC is the only serious company producing Palladium. PALL ETF's have performed well, and both these recommendations have done well. Palladium prices may move up

aggressively so hold positions in it and one can add more if they feel like at current levels. Those who like to play safe should buy PALL and SWC, as the current ongoing problem between Russia and Ukraine has put pressure on Palladium prices as Russia is one of the largest producers of Palladium and the supply has been drastically falling.

Two years ago when we predicted, Palladium prices moving toward \$1000, we never knew about the tensions between Russia and Ukraine. The markets trend builds itself on any hidden reason before any trend starts, and no one knew that the prediction of rising Palladium prices had the hidden reason of Ukraine/Russia.

This week precious metals will hold value on Monday, Tuesday and Wednesday. On Thursday Metal prices will move on both sides. On Friday precious metals will lose value sharply on late Thursday or Friday and this should be taken as a selling opportunity. Trading in and out will remain the best strategy during this week. On Thursday or early Friday the positive cycle will end and after that a negative time cycle will start so be careful.

Base metals will remain positive during Tuesday, Wednesday and Thursday. Trade in and out in copper and Platinum but Palladium will be will keep moving higher.

Gold will struggle to move above \$1298.90 and \$1307, and on the lower side it is holding value around \$1282 but once it break and trade below for two days will confirm it going toward \$1243 and lower.

For daily trading ranges and strategy you have to subscribe Daily flashnews.

Here is Monday's range: (December 2014 contract):

GOLD: \$1295.90 to \$1280.00 Oct contract

SILVER: \$19.79 TO \$19.33

COPPER: \$319.90 TO \$313.50

PALLADIUM: \$913.90 TO \$901.90 [Add more](#)

PLATINUM: \$1436.90 TO \$1414.10

INDEXES

Last week S&P closed at an all-time high, but the remaining global equity markets traded mixed. Mars is about to enter in Scorpio which should bring the most aggressive upside trend in the markets. Mars will be changing house on the 4th of September, so watch the next few days trend very closely. Mars will support tech and biotech stocks so

you should have sizable positions in both these sectors. Also, if you don't like to invest in individual stocks then buy ETF's. There is BIB IS leverage ETF's from the biotech sector and in technology SOXL so stay long in both these ETF's.

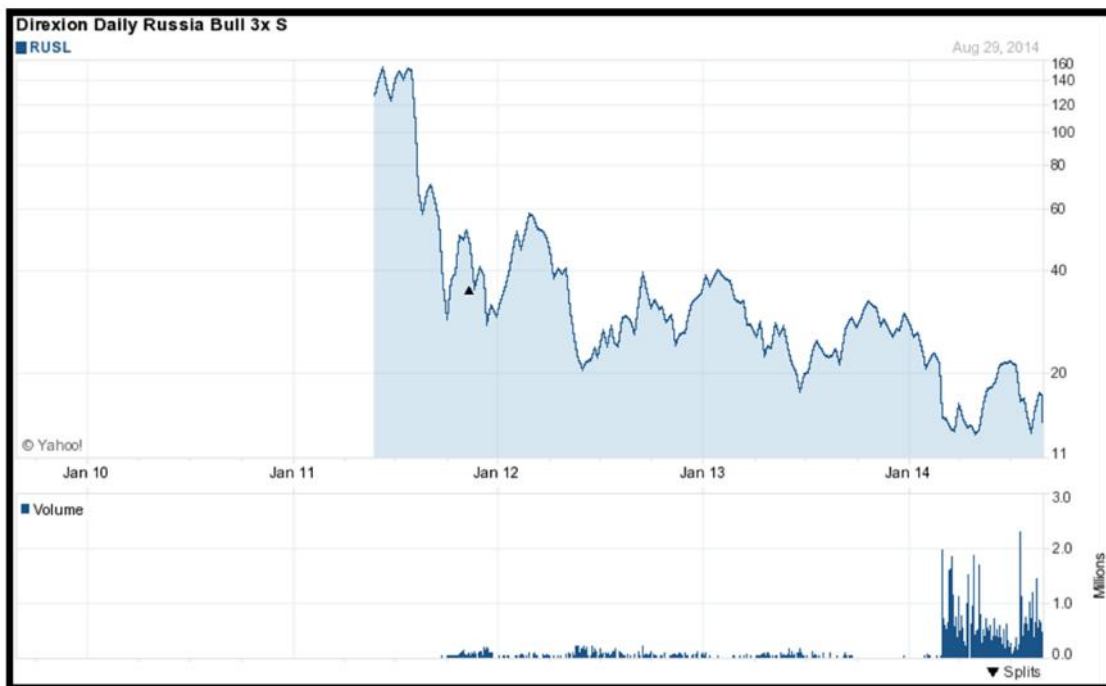

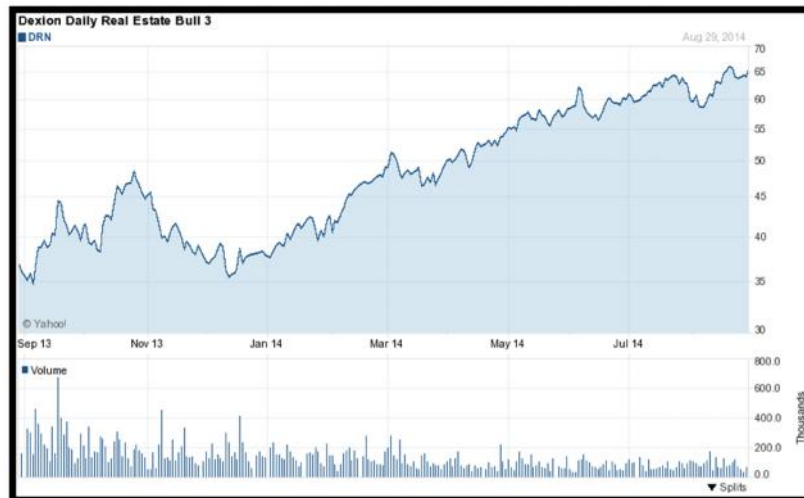

Housing DRN and financial FAS ETF's are also doing well as predicted. One should hold positions in both of these sectors ETF's. DRN has performed extremely well since we recommended it, and we are still recommending holding DRN.

This week everyone will be focusing on international

news, especially the Iraq and Syria, and Ukraine and Russia situation. Aggressive sanctions are mounting on Russia but any serious commitment from Russia can push RUSL sharply higher. Lately RUSL has lost huge value against most of

the other markets. Russia is the only market which underperformed in the last three years. Putin is making investors poorer every single day and he has to turn the table otherwise the big guys in Russia will go against him. Though I stop predicting the international markets trend but the current astro chart of Russia and Putin looks negative which is clearly indicating that Russia or Putin will lose the Ukraine battle very badly. This will eventually lead to Putin accepting all international terms within a few weeks to make peace with Ukraine and the International community.

Two months ago we mentioned that the middle-east and war in Islamic countries will spread from June 2014, and we don't see the situation coming under control. This battle will remain a headache for many.

This week on Monday and Tuesday there is a Scorpio Moon so international news will keep flowing in the market which may bring both side volatility. Any sharp rise or fall should be taken as a trading opportunity. We also recommend not taking any aggressive positions on any side when the markets are trading sideways on both of these days.

We have been advising our members to stay away from the European markets and we still recommend staying away however we are not recommending any shorts in the European market as USA will keep moving higher which will support the European market sentiment.

Selling advice in DAX at 10000 with the target of 8900 did very well. We also recommend covering all shorts in DAX around 8900 which has also proven to be prudent advice.

Emerging markets will trade sideways, but we still believe that the Indian market will trade positively. The South African market will keep trading lower, and the higher side is very limited for **RSA market**.

On mid Wednesday or during any weakness on Wednesday one can add aggressive positions in all major markets as we see a rally continuing on Thursday and Friday. S&P, NASDAQ, RUSSELL and DOW will be moving to another new high.

Our higher side target of S&P is 2037 and this should fulfil soon. On the lower side S&P will hold our previous resistance level of 1988.

For daily trading ranges and strategy you have to subscribe Daily flashnews.

Here are Mondays' ranges: (September **contracts**)

AUSTRALIAN (SEP) – 5428 to 5490

NIKKEI (June) – 15530 TO 15345

NIFTY S&P (Spot) – 7992 to 7920

HONG KONG (cash) – 24890 to 24659

CAC – 4411 TO 4361

DAX – 9559 TO 9412

DEX EURO STOXX – 3195 – 3145

FTSE – 6863 TO 6795

FTSE/JSE – 45970 to 45627

S&P – 2010.50 TO 1996.50

NASDAQ – 4097.50 TO 4069.25

RUSSELL – 1179.50 TO 1165.70

DOW – 17170 TO 17040

TREASURY BOND

This week Thirty bond traded around 141, and it will be testing time for Bond, as well investors because we still believe that Bond prices won't be able to hang around the current prices for the longer term so watch the trend closely.

At this stage bond prices are holding above 138 and 141 so we are not recommending any shorts but surely one can hold positions in put options as the medium and longer term trend looks very negative. Watch Bond for another two weeks, don't trade with any future market positions.

On Monday the USA market will remain closed but on Tuesday and Wednesday we may see a mixed to positive trend. On Thursday and Friday Bond prices will remain directionless.

For daily trading ranges and strategy you have to subscribe Daily flashnews.

Monday trading range (September contract):

TREASURY BOND – 141-30 TO 141-03

SOFT COMMODITIES

Last week soft commodities traded mixed, but coffee and cotton remained in a bit positive direction. The same kind of trend will continue during this week. Coffee prices are hanging around \$200 level which is clearly indicating that prices will move further higher. Hold positions in coffee, and add more cotton and sugar but not very aggressively. Buying call options will remain a great bet for both of these softs. We are sure you must be holding positions in coffee, and our target of \$237 should fulfil soon.

On Monday the soft commodity market will remain closed but on Tuesday we see softs trading a bit positive. On Wednesday and mid Thursday softs will trade mixed to a bit weaker but on Friday a positive trend will push coffee sharply higher. Sugar and cotton will also move higher.

For daily trading ranges and strategy you have to subscribe Daily Flashnews.

Monday trading range: (OCT/December 2014 Contract)

COFFEE: \$197.90 TO \$192.90

COTTON: \$68.50 TO \$67.30

SUGAR: \$15.69 TO \$15.37

ORANGE JUICE: \$151 TO \$146.30

COCOA: \$3250 TO \$3200

GRAINS

Last week grains traded mixed or on both sides. We have been enjoying predicting the grains markets trend like gold and oil. Grains traders have done very well on our short and medium term advice. We strongly recommend avoiding any buying in soy products but surely corn and wheat should be in your buying list for the medium and longer term.

Last month we mentioned buying call options and that should be your strategy, or you can trade in and out on a daily basis which has also been working very well almost every single day.

On Monday grains market will remain closed, and Tuesday's opening will be mixed. On Tuesday and Wednesday we recommend trading in and out without any aggressive trade. On Thursday and Friday we see positivity coming back in soy, corn, wheat so short buying will provide some gains on both of these days.

We are all aware that there is a bumper crop in Soy and corn but still we see Corn holding value.

A few months ago we recommended covering soy around \$1030 and wheat around \$550, which you must have done. Now the time to buy soy has come if it moves to around \$930, and Wheat \$491.

Buy aggressive position in corn around \$333.

Monday's trading range (December 2014 contracts):

CORN: \$368.50 TO \$360.00

WHEAT: \$572.00 TO \$554.50

SOY: \$1027.00 TO \$1020.50 (November)

SOY MEAL: \$354.00 TO \$346.80

SOY OIL: \$32.59 TO \$31.91

ENERGY

Last week energy traded a bit positive as predicted. Oil held value around \$92.38 as predicted, and on the higher side \$95.55 is close to getting breached which indicates that oil will move towards \$98.78. Oil may remain or will be stuck in the range of \$92.55 to \$98.78 as mentioned last month.

Most of you aware that commodities are trading sideways, but Mars changing house may bring some buying interest in commodities but we would like to check the move first before we recommend any trade in commodities.

This week trading in and out will remain the best strategy in commodities. Oil and Natural gas will remain in a positive direction so buy around lower side from Monday to Wednesday. On Thursday and Friday we may see a sideways trend.

Last week we recommended energy stocks, and we are still recommending holding positions in energy stocks. Those who missed the opportunity of buying should get in stocks on Tuesday.

This week Natural gas will remain in a positive direction so buy gas and hold positions. You can book profit on Friday, and we see a 5% move in Natural gas during this week.

You should buy ERX, without fail, buying recommendations in ERX have did well as it moved from \$110 to \$123 in the last three weeks.

Monday's trading range (All October 2014 contracts):

OIL: \$96.50 to \$95.00 Oct

NATURAL GAS: \$4.14 to \$4.00 Oct

HEATING OIL: \$2.8820 TO \$2.8390

RB GAS: \$2.6430 TO \$2.6020

CURRENCIES

Last week USD performed well as predicted. We are happy with USD moves. Currently one should hold positions in USD but USD has closed above 83.28 for three days to give aggressive move toward 88.78. We see USD struggling to move above 83.28 as Mars is changing during this weekend which may bring a new trend in all major financial instruments.

USD and USA markets are starting to move higher which is give clear signs that the journey of USD has started and it will move towards the all-time high of 120 in the next three to five years.

This is very important and USD should hold value at 82.53 to give us clear signal of a powerful trend on the way.

This week on Monday and Tuesday there is a Scorpio Moon so trade carefully, any weakness or sharp rise in currencies should be taken as a trading opportunity.

British Pound and Yen will gain value on Monday but the higher side will remain limited. From Tuesday evening Yen will start losing gains. From Wednesday to Friday Yen may move towards new lows.

Euro and Pound will start falling sharply from the middle of the week, and it looks like a very scary trend. On Monday and Tuesday we see a both side trend. From Wednesday onwards both these currencies will lose value.

Canadian and Australian dollar will gain this week, so cover all shorts in both these currencies. This week both these currencies will keep gaining value from lower levels.

Monday's trading range: (September contract)

DOLLAR INDEX – 83.03 to 82.51

AUSTRALIAN DOLLAR – 0.9359 to 0.9290

CANADIAN DOLLAR – 0.9219 to 0.9169

BRITISH POUND – 1.6621 to 1.6557

EURO – 1.3175 to 1.3110

JAPANESE YEN – 0.9635 to 0.9575

SWISS FRANC – 1.0925 to 1.0863

RUPPEE – 60.65 to 60.35 (Spot)

RAND – 10.65 to 10.52 (Spot)

Our special discount offer will end soon.

Thanks & God Bless

Mahendra Sharma

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
