11 July June 2016

Monday Flash news (unedited copy)

Volatility will continue in commodities until 17 July

Dear Members,

The overall trend has to listen to astro cycles if longer term cycles are positive, and at this stage for USA market longer term cycles are positive so the market will rebound from any sharp corrections. The market will hold downside value on any worst economic news and news like Brexit. Yes, for a few days the trend can be impacted by external forces.

In metals, the overall short term cycles became positive from January but due to the longer term cycle remaining in bearish trend forced us not to predict buying in metals and surely we missed the last six months move in metals. This is an important learning for us. Metals cycle will change on 17 July, and 12 August and still the overall trend in metals will remain negative so we will still recommend to holding put options of February 2017 in metals and metal etfs.

Last week after JOB report, metal lost value but it recovered everything and closed in green. Energy prices remained negative, and commodities like grains and softs traded very volatile.

Currencies remained under pressure but a few emerging markets started showing positive signs. Thirty Year Bond moved towards an all-time high, so surely it is a great time to buy housing or taking other loans at such low rates.

As predicted S&P held 2064 level, and closed above 2117 level which confirms that a new era is beginning for USA equity market. Oil failed to move above \$49.88, our selling recommendations did well, and more weakness is on the way. Stay away from other commodities and surely metals are trading very aggressively so stay sidelined, let them settle and after 17 July will be the right time to take trades in metals.

Best trades for Monday:

Buy cotton,

Buy Rupee, Rand and Peso, because some aggressive movement is on the way.

Sell energy higher levels and buy S&P around 2105

Here are the trading strategy and ranges for Monday:

GOLD/SILVER/BASE METALS

On Friday aggressive movement on both sides was clearly warning metal investors to stay away from short term trading because stop-loss order won't work in current conditions as they will hit both sides. Last week was a positive astro week as we mentioned in weekly newsletter.

17 July is still one week away so trade carefully in metals. We recommend staying sidelined, we strongly recommend to read this week's weekly newsletter as well as last three weeks.

On Monday astro combinations are mixed to negative and normally we always recommend selling on the higher side with these kind of astro combinations but still we are not recommending any aggressive trading till 17 July. Adopt the trading in and out strategy in precious and base metals on Monday.

DUST is losing value non-stop, we recommend holding positions for the medium to longer term.

On the other hand, HUI will not be able to close above 279 level so watch this level closely. Also watch mining stock bull etfs NUGT, and JNUG, they are both moving sharply higher.

At this stage we recommend to take put options in Gold, silver, JNUG, NUGT and call in DUST for 2017, this trade can make you a fortune. Short for the few weeks stay sidelined.

Metals positive trend started from early this year and now gold is about to enter into negative cycle in three stages: 17 July, 12 August, and 29 September. We still believe that Gold is in a longer term bear cycle and will fall towards \$775 or lower in 2017 so wait on the side and we are sure you will get a great opportunity to make money.

After the second week of September no power on this planet can save gold from falling so watch this prediction closely. Take longer term PUT options if you believe in our predictions and we are sure you will mint money by February 2017.

Here is Monday's range: (September 2016 contract):

GOLD: \$1375.90 to \$1350.10

SILVER: \$20.57 TO \$19.95

COPPER: \$214.10 TO \$210.30

PALLADIUM: \$625.90 TO \$609.10

PLATINUM: \$1109.00 TO \$1092.00

INDEXES

Last week USA, FTSE and Chinese markets traded very positive. Traders are saying that the fall in Pound is helping UK market but the fundamental of UK economy doesn't support this point. USA market is key and 100% of our focus is on USA market because astro cycles are so positive for USA from 2011 and will start getting even more positive from the second half of 2016 as predicted, and 2017 will remain a very powerful year so stay with this bullish era of USA.

We see a great rise of USA on each front so invest in USA because we still believe that S&P will hit 3200.

S&P closed above 2117, and this is one of the most important levels and we are confident that S&P may move towards 2157 level soon. On Monday we see most of equity markets remaining positive. We recommend buying positions around the lower side in all major indexes. Stay long in real-estate and housing related stocks in USA and Europe. Tech and food will also move higher in USA.

This is what we mentioned on 5 July: *Monday most of market gained value except European markets. Shanghai traded sharply higher and positive trend will continue on Tuesday in Chinese and Hong Kong market. Our view is very bullish for Chinese market from here onward. Indian and rest emerging market will trade positive but one can book some profit. At this stage S&P will struggle to move above 2117 level. Only major bullish trend in USA market will start once S&P closes above 2117 for three days. Down side we don't see S&P going below 2064 level now so trade in the range of 2064 to 2117 levels.*

Brazilian etfs performed very well. Many were upset with BRZU but it gained handsomely from \$27.00 to \$109.00. Real gaining 30% have BRZU.

From mid-July S&P will start moving sharply higher and may achieve 2475 to 2525 by the end of this year.

This is what we mentioned on the 29th of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

Here are Monday's ranges: (September 2016)

HONG KONG (cash) – 20981 to 20679

NIKKEI – 15591 TO 15315

NIFTY S&P (Spot) – 8388 TO 8301

CAC – 4199 TO 4161

DAX – 9705 TO 9555

DEX EURO STOXX – 2857 – 2819

FTSE – 6611 TO 6525

FTSE/JSE (Cash) – 45351 to 44781

S&P e-mini – 2133.75 TO 2010.25

NASDAQ 100 e-mini – 4551.00 TO 4501.00

RUSSELL e-mini – 1182.00 TO 1166.00

DOW e-mini – 18115 TO 17975

TREASURY BOND

On Friday Thirty Year bond traded higher and made another high. On Monday we see both sides movement so trade in and out. We will watch 12 July trend before we give clear advice.

Finally, great amount of returns could be achieved in medium and longer term trades in TTT, TMV and TBT.

Monday's trading range (September 2016 contract):

TREASURY BOND – 177-23 TO 176-05

SOFT COMMODITIES

On Friday most of the softs traded mixed, and cotton and orange juice moved higher. Coffee traded mixed but sugar lost value.

On Monday we recommend buying some aggressive positions in cotton, selling is recommended in sugar on the higher side. Stay sidelined in coffee because even though we still see coffee doing well we would like to watch next two days' trend.

Orange juice can move higher, selling in Orange juice is recommended around \$205 to \$211. Stay away from trading in cocoa and lumber.

Coffee has to remain above \$143 to move towards \$159 to \$178 level, so coffee must hold \$143 level.

This is what we mentioned last week 26 May: We strongly recommend staying away from any short positions as sugar prices may move towards \$17.65 level and that will be the level to take some short positions with stop-loss of 17.89 and if Sugar start trading above \$17.89 for 26 hours than we may see \$19.98 level.

Coffee prices will hold value on the Down side so one can buy some positions in coffee on Monday. \$128 level will play the resistance level. On the other hand orange juice will move higher but we don't see it moving above 165.00 level so close all positions if you have any in Juice.

Stay short in cocoa and buy coffee as prices will hold \$122 level.

Remember what we mentioned in February 2016 - Coffee will struggle to close above \$118 and \$128. The maximum down side is \$112 or \$109. One can start accumulating coffee with target of \$128. Cotton will struggle to close above \$64.88 and on the down side one can buy around \$57.50. Sugar selling is recommended at \$16.65 buying around \$12.78 to \$12.50 is recommended.

Monday's trading range: (July 2016 Contract)

COFFEE: \$144.25 TO \$141.15 Buying recommended at \$112.50 and \$118.00

SUGAR: \$19.97 TO \$19.35 First bought at \$12.78 – Now book profit above \$19.98

GRAINS

Last week soy and meal moved both sides aggressively by 3 to 5% move on a daily basis. Corn and wheat finally stabilized on Thursday. Soy oil lost value during the last week.

On Monday we recommend taking sell positions in soy and meal on the higher sides as Real may struggle. Buy some aggressive positions in wheat as we see Rubble moving sharply higher which will support wheat prices. The down side in wheat will remain very limited.

Soy oil will trade mixed but wait for right time, we like you stay side lined in Soy oil. Corn will trade mixed so trade in and out but surely one can buy corn around the lower side on Monday.

For the medium and longer term corn and wheat are great buys but one should wait for one week.

Last week on 9 June, we stated - *Buying recommendations in soy and meal from November 2015 have done very well. Corn will struggle to move above \$451, Soy \$1211, and Soy meal \$435; these are the levels to sell.*

This is what we mentioned on the 2nd of March 2016: Buy May/Sep 2016 call options in wheat, corn and soy. An interesting trend will develop any time in grains so you must have some positions in grains. 3 March is the turnaround day for grains so plan your trades accordingly. Short term traders can trade in and out.

The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.**

Monday's trading range (July 2016 contracts):

CORN: \$357.50 TO \$345.25

WHEAT: \$429.00 TO \$420.00

SOY: \$1109.00 TO \$1069.00

SOY MEAL: \$382.90 TO \$371.00

SOY OIL: \$30.60 TO \$29.97

ENERGY

Oil, heating oil and RB Gas lost value during last week and our recommendation of selling did very well. On Monday we recommend selling oil, heating oil and RB Gas at the higher side value mentioned here below so trading in and out is recommended on Monday with selling on higher sides.

At this stage on the down side some astro support point will be at \$44.55 and \$42.38 level, we are just recommending covering some shorts but no new buying is recommended. We don't see oil holding above \$47.00 level now and on the down side in medium term we may see \$38.78 level in the oil during the next two months.

Natural gas will trade both sides, energy stocks will do same.

This is what we mentioned yesterday: *On Thursday oil, heating oil and RB Gas will trade mix, and in the second half of trading session oil may start losing value to selling is recommended in oil, heating oil and RB Gas around higher sides.*

Energy stocks may open higher but may start giving up gains in the second half of the day. If oil closes negative on Thursday will confirm that it is going toward \$44,55 level or lower.

Oil will struggle to close above \$48.88 to \$49.88 level and down side we may see two small support at \$46.10 and \$44.55. Stay away from any buying in oil and energy stocks as negative time cycle is starting.

We are not changing any of the predictions we mentioned on 3 June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it has to close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level and on the down side the important level to buy is at \$44,55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2nd of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

A few past important predictions and levels for energy of the daily Flashnews are at the end of this letter.

Monday's trading range (All August 2016 contracts):

OIL: \$47.05 to \$44.85

NATURAL GAS: \$2.84 to \$2.73

HEATING OIL: \$1.4221 TO 1.3625

RB GAS: \$1.4021 TO \$1.3409

CURRENCIES

On Friday emerging market currencies, Yen, and Australian dollar gained value. Our most favorite trade will be buying Rupee, Rand, and Peso so don't miss buying in these three currencies as well as Australian dollar.

Pound lost big value last week, but we don't see it moving below 1.2808 level so buying is recommended around this level. Euro and Franc will trade on both sides on Monday so trade in and out as per the levels mentioned here below.

Yen will hold value but on the higher side one can keep selling Yen as we don't see Yen crossing 1.0278 level so plan your trade well.

Real, Canadian and New Zealand Dollar will trade mixed or sideways.

Dollar has been struggling to move above 97.00 level and we don't see USD going above 97.00 level. Overall Monday will be mixed day but buy the mentioned emerging market currencies.

Remember this - Dollar will struggle to move above 96.50 to 97.00 levels so keep this in mind. Buy Australian dollar, Euro and Franc on lower sides and book profit on higher sides.

We don't see Yen moving above 0.9878 level and we stay above 1.000 level, and in the worst case scenario with target of 0.9188 to 0.8828 level in the next two months so one can start selling Yen.

On Monday, the 11th of April we stated: *Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level. Euro and Franc may hold value on Monday but most of the other currencies will lose value against USD from middle of Monday so great time to sell positions in most of other currencies.*

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level. Wednesday will be right day to build some short for medium term positions in these currencies.

A few of the past important predictions and levels for currencies of the daily Flashnews are at the end of this letter.

Monday's trading range: (Septembre futures)

DOLLAR INDEX – 96.69 to 96.01

AUSTRALIAN DOLLAR – 0.7612 to 0.7521

CANADIAN DOLLAR – 0.7691 to 0.7631

BRITISH POUND – 1.3033 to 1.2873

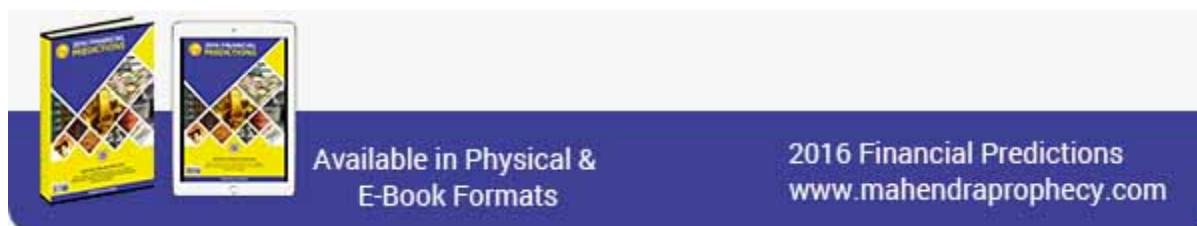

EURO – 1.1128 to 1.1018

JAPANESE YEN – 01.0033 to 0.9915

SWISS FRANC – 1.0259 to 1.0178

RUPEE – 67.25 to 66.88 (Spot)

RAND – 14.61 to 14.39 (Spot)

Thanks & God Bless, Mahendra Sharma

10 July 2016, 03.00 PM, Santa Barbara

Some past important notes and important ranges from our daily flashnews:

From few past Flashnews - important commentary:

This is what we mentioned on the 18th of Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.

After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.

There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21st of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.

Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts.

INDEXES:

This is what we mentioned on Tuesday, the 25th of January: *Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.*

All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.

Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.

This is what we mentioned the 18th of Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

Energy:

This is what we mentioned Monday, the 21st of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on the 27th of August 2015: If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

*This is what we mentioned on the 27th of April 2015: Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5th of March 2015: Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

*This is what we mentioned on the 3rd of January: **On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

*This is what we mentioned on the 23rd of December: **Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.

*This is what we mentioned on the 5th of December 2014: **Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy

and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we mentioned last Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned on the 22nd of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23rd of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on the 15th of Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
