Friday's Flash news (unedited copy)

Keep adding banks & tech stocks

Dear Member,

On Thursday once again the energy market dominated USA trading pattern. The Asian market traded negatively due to weak closing on Wednesday but the European market traded positively on Thursday. USA market opened higher and kept moving higher on positive retail sales numbers but erased all most of gains due to a fall in oil prices.

From mid-day oil started trading lower and started trading below \$60.00 which brought panic on the trading floor and selling started building up. Oils trend is dominating the markets trend, energy stocks are falling hard, heating oil, RB gas and brunt oil tested lows of 2009. Stay away from energy as predicted. One can buy some positions in oil if its touches \$57.80 as predicted. Our view on oil and metals saved big money for our members. We are not recommending any buying in energy stocks during the next three weeks but surely 2015 will bring great opportunities in quality stocks.

Metals traded mixed to a bit negative and we recommend staying away from metals.

Grains and softs traded mixed to a bit positive, cotton moved sharply higher as expected.

Thirty year bond traded mixed and some positivity will remain there for two days before it starts moving down.

Currencies lost big value after the Asian market, our recommendations of selling in currency did well on Thursday. Buying recommendations for USD remained one of the best call of 2014.

This is what we mentioned yesterday: *Thursday will be interesting day because most of markets will rebound strongly, we don't see any major weakness in markets especially USA so buying is recommended but surely selling pressure will continue on higher side until it doesn't cross 2080. So far S&P keep was not able to break 2080 which is bring selling pressure but lower side we don't see S&P going below 2014 so get ready to buy stocks and Indexes.*

We don't recommend any shorts here, though technically most of markets have turned negative but astro indications are not turn negative at all so buy banking and tech stocks. GMCR performed well and RH also moved higher, hold positions in these stocks. Banking should rock from Thursday so get ready to load up banking stocks.

Buy USD on Thursday, sell metals around higher side on Thursday, stay away from energy, grains and softs on Thursday.

Great time to get into Thirty year as only few final positive days are pending.

In this week newsletter we mentioned if oil trades negative on Wednesday will be worst news for market and energy traded negative which is not good news for energy traders.

Thirty year will keep gaining value during this week, 145 to 148 will be right range to take aggressive short.

Financial and tech stocks will outperform in the next three weeks.

This is what we mentioned 4 Nov: *Saturn moved zodiac house's after 30 months and today it entered Scorpio house. I don't want to write any predictions of this move though we see that it can push S&P towards 3200 or 5000 in the next thirty months (chances of this happening is 99% and there is a 1% chance that the market may just collapse from here). I would like to watch the market for another two weeks before we confirm 100% as we don't want to make any error at this stage.*

This is what we mentioned on 15 October we would like you to read one more time: ***If we are right on this then watch market because DOW is ready to move 500 to 700 to even 1000 point rally in day. I have trusted our astro indicators in the last 25 years, and they never guided us wrong on crucial stage. We saw this uncertainty coming for short period from 19 September to 16 October, we are 48 hours away from 16 Oct but this Mars can make everyone crazy by pushing stock prices sharply higher.***

Here are the trading ranges and strategies for Friday:

METALS

On Thursday metals traded mixed without any clear directions. Precious metals will remain in a mixed direction on Friday so trading in and out is recommended as per the daily trading ranges mentioned below. Metals stocks will remain weaker compared to metals.

We recommend selling copper on the higher side on Friday. Palladium and Platinum will have a bit weaker trend.

Higher side selling is recommended around \$1242 to \$1247 as gold will have difficulty crossing these levels.

Fall in USA markets and energy prices crash is helping sentiments and GOLD's positive days are getting over so stay away from any buying as gold can fall sharply without any reason. We are seeing some positivity in metals which is confirming that the second half of 2015 will be a good time.

This is what we mentioned three months back: *Gold breached \$1283 level which clearly indicating that is moving toward \$1248 to \$1153 and silver \$17.57 to 15.87 level soon. Metal stocks will also suffer setback.*

Here is Friday's range: (March 2015 contract):

GOLD: \$1232.80 to \$1216 Feb 2015

SILVER: \$17.19 TO 16.70

COPPER: \$293.10 TO \$287.60

PALLADIUM: \$822.00 TO \$810.80

PLATINUM: \$1247.30 TO \$1226.00 Jan 2015

INDEXES

On Thursday the Asian markets traded negatively but they recovered from lows. The same happened with the European market but they gained after the opening of USA market. USA market opened positively but started losing ground once oil started losing value.

Oil will remain a painful instrument for investors for some time, and investors have to start living with the pain. Soon investors will start ignoring oil moves, so a disconnection will surely start between oil and the market. We are not recommending buying energy stocks at this stage but surely watch \$57.00 level closely as we are expecting a short term bottom around this level as predicted previously.

We recommend covering all shorts in oil, energy stocks, RB Gas and heating oil once oil reaches \$57.78 levels. Don't buy energy stocks but surely during 2015 we may watch energy stocks closely. Basically we recommend avoiding commodities and commodity stocks for the next two weeks.

We still believe that S&P won't break 2015 the astro support level in the next two and half weeks of 2014. Currently S&P is trading around 2027. Banking and tech stocks performed very well as predicted and they are our favorites for the short and medium term basis so buy more banking stocks. **GMCR, FAS and RH** performed well as predicted.

On Friday we are still recommending buying markets around the lower side but there is no need to carry forward any big positions over weekend as we are ending in final two weeks of 2014 so we recommend trading light.

Asian and European markets will perform stable so buying around the lower side in these markets recommended.

This is what we mentioned yesterday: *Anyway S&P will hold 2014 level, we don't S&P going below this level but if it does then we may see 1988 but chances are very less of happening this.*

Our 2015 target is very high for market, so weakness should be taken longer term buying opportunity in Indexes by buying call options.

These corrections should be taking buying opportunity in banking and tech sectors.

We are not recommending short on Thursday watch our predicted lower side ranges and take this buying opportunity. If lower side ranges breaks and trade below for three hours then only new lower ranges can come by falling one more percent but chances of happening this just 1%. We are not recommending any shorts in markets at this stage.

Start buying USA Banking stocks with both hands as these are our most favorite at this stage, one should buy or add more positions in financial. Buy banking stocks for short, medium and longer term.

Tech stocks are also performing well, biotech stocks are gaining value from lows.

Here are Fridays' ranges: (December **contracts)**

HONG KONG (cash) – 23370 to 23020

NIKKEI – 17555 TO 17030

NIFTY S&P (Spot) – 8335 to 8235

CAC – 4255 TO 4179

DAX – 9933 TO 9760

DEX EURO STOXX – 3191 – 3125

FTSE – 6519 TO 6425

FTSE/JSE (Cash) – 42579 to 41829

S&P – 2048.00 TO 2020.50

NASDAQ – 4283.50 TO 4216.25

RUSSELL – 1175.00 TO 1153.00

DOW – 17689 TO 17455

TREASURY BOND

On Thursday Thirty year bond traded positively and the same kind of trend will continue on Friday. We are getting closer to the top in thirty year. Longer term traders should keep taking trades as recommended.

145 and 148 are great ranges to add put options in Thirty year and buy in TMV around \$32 levels. June's contract is trading around 156, take selling positions in June contracts.

This is what we mentioned last week: *This is the final positive week for Bond as major weakness in Thirty year bond will start from 9 December, and prices will continuously move down so keep adding Options trades as recommended. It will be very difficult for bond to trade positively after this week so higher side selling is recommended. Buy December 2015 call options in TMV. You can also buy some put options in Bond of March 2015.*

We are changing our upper side target of 148, one can add more put options.

Friday trading range (March 2015 contract):

TREASURY BOND – 145-01 TO 143-25

SOFT COMMODITIES

On Thursday cotton and lumber gained value as predicted. We are still recommending adding positions in Lumber, orange juice and cotton. One can avoid the rest of softs, and we see that big moves may come in Orange juice, lumber and cotton. Cotton can easily gain another 5% from current levels.

On Friday we see cotton, orange juice and lumber gaining value. Sugar will trade mixed.

Sugar is coming very close to buy as the Sun is changing its house from the 15 December and this will support Sugar prices.

This is what we mentioned on 23 October: *Avoid coffee, cocoa, orange juice and lumber. Coffee is trading below 195 which is a negative sign, and may hold \$185 at this stage and rebound from \$185. Sugar may retest 14.83 level and this will safe to buy. Add more cotton around 58.50, or BAL.*

Coffee buying recommendations at \$107 done amazingly well, it gained 80% which is huge in commodity market and we are still recommending buying coffee. Those who bought can hold positions as our next target is \$212.

Friday trading range: (March 2015 Contract)

COFFEE: \$178.20 TO \$173.90

COTTON: \$61.30 TO \$59.80

SUGAR: \$15.35 TO \$15.05

GRAINS

On Thursday grains traded mixed. Avoid any buying on Friday, and we are still recommending selling on any rise or around the higher side. At this stage trading in and out will be the right strategy in grains.

Sell wheat, and soy on rise. Corn will trade positively comparative to the other gains. Soy meal will trade negatively but Soy oil will bottom out soon.

Trade in and out, as this will remain best strategy for the next two weeks.

This is what we mentioned four months back: *Don't buy any position at this stage but wait for the next week's newsletter for the right advice. Selling calls in soy around \$1550, wheat at \$730 have done very well and we targeted Soy to fall below \$1000 and wheat \$550. Both these lower side targets are closer to being fulfilled. Selling grains remained the best advice in 2014, yes gold and silver selling has also done well.*

This is what we mentioned two month back: *Avoid Soy products. We don't see soy going below \$930, wheat \$477 and corn \$330 so go aggressive if prices come to these levels.*

Friday's trading range (March 2015 contracts):

CORN: \$401.50 TO \$393.50

WHEAT: \$604.50 TO \$585.00

SOY: \$1054.50 TO \$1027.50 (Jan-15)

SOY MEAL: \$363.80 TO \$355.30

SOY OIL: \$32.50 TO \$31.77

ENERGY

On Thursday oil started trading below \$60.00 level and closed around \$59.00. Heating oil and RB gas traded also weaker but natural gas remained in a mixed pattern. Energy stocks once again went lower after opening positively. It has been a nightmare for energy traders who were long in oil and energy stocks. The time have become very crucial for energy producers and funds/banks those who were investing money without thinking twice.

Astro cycle was very negative for commodities in 2014 and from softs, grains, metals and now energy, one by one started falling during 2014. I respect and believe 200% in our astro theory that's the only reason I was able to predict a negative trend for commodities in 2014.

On Friday we may see weakness continuing but according to our theory we may see short term bottoms in oil around \$57.78 so watch this level. One can cover all shorts around this level in energy and energy stocks but we are not recommending any buying at this stage even for the short term so better to go flat or without any positions in energy at this stage.

Natural gas will remain mixed to positive on Friday.

This is what we mentioned yesterday: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20.*

Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level.

Energy stocks are crashing, heating and RB gas falling sharply with oil. We still recommend to stay away from energy at this stage, trading in and out will be right strategy, specially selling at higher levels.

Thursday still selling pressure will remain in energy and energy stocks, one can buy oil if it reaches to \$57.80 as we see short term oil bottoming out.

*This is what we mentioned Tuesday: Tuesday oil prices recovered bit, but still selling pressure remained on higher sides. Many traders are holding long and **in this week newsletter we mentioned that if Wednesday and Thursday oil prices closes negative can bring disaster for oil in coming days.***

We are not recommending any buying in oil, heating oil and RB gas. Oil is still below \$64.20 which is not good news at all.

This is what we mentioned Monday: Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gas gained value from the lower levels on Friday as predicted.

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday.

It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Cheaper gas prices are putting a huge positive impact on USA as well as the world's economy. Consumers are saving big bucks.

This is what we mentioned on last Friday: We recommend trading in and out in energy as still weakness is not over yet, more weakness will come in energy from middle of next week and by end of this year oil may close nearer to \$60 levels so watch first \$64 level and then \$60 levels.

This is what we mentioned on three weeks back on Wednesday: Wednesday oil prices traded negative, heating oil and RB gas also went down. Oil will have support at \$73.00 levels and once it start trading below then we may see \$64.00 level.

This is what we mentioned last 2 October: Thursday we see oil trading positive but if it's close below \$78.78 will be negative news and oil may hit \$72.83 within ten days.

Friday's trading range (January 2015 contracts):

OIL: \$59.99 to \$58.01

NATURAL GAS: \$3.75 to \$3.56 Buy today

HEATING OIL: \$2.0700 TO \$2.0110

RB GAS: \$1.6420 TO \$1.5995

CURRENCIES

On Thursday dollar started gaining value from lows as predicted. Yesterday we recommended selling Australian dollar, Canadian dollar, Pound, Euro and Franc around the higher sides and all these currencies moved sharply lower after opening sharply higher in the Asian markets.

On Friday currencies will trade on both sides, but still the lower side will remain limited for USD. Close 100% positions in currencies! Now one can get out from buying USD and selling Australian, Canadian dollar, Euro and Franc.

Emerging markets traded negatively and the next two weeks a mixed or weaker trend will continue in emerging markets but take this as a buying opportunity as emerging market currencies are ready to move 3 to 5% against USD in the next two months.

On Friday one can trade in and out in all major currencies as mentioned below ranges.

This is what we mentioned yesterday: *Wednesday USD traded negatively, we recommend buying in USD on Thursday on lower sides. At this stage we strongly recommend staying away from any aggressive position in currencies. Thursday one can sell Japanese Yen, Euro, Franc, Canadian dollar and Australian dollar as mentioned higher side ranges below here in ranges sections.*

We have been mentioning that USD Index will have touch time to cross 90.00, since last two weeks we also recommend to booking profit in currencies as this year selling euro and buying USD have done amazing well and we don't want to spoil any profit now by trading aggressively.

Emerging market currencies will lose some more value but this may be year ending things with banks, borrower and lenders.

Short term trades: *Sell euro and Franc around higher levels on Wednesday as we don't surprise with huge correction in both these currencies in the next three to five trading sessions. We still believe that Euro may move below 1.20 level in the next five to six trading sessions.*

This is what we mentioned Monday: *Friday dollar gained handsome value, Euro, Yen and Franc made more lows and Dollar made a high. We recommend trading in and out in currencies on Monday, book 85 to 90% profit in USD, EURO, FRANC and YEN. Our view for the medium and longer term is still very negative for euro and Franc compared to other currencies so we won't recommend any net buying in Euro or Franc.*

Emerging market currencies traded as predicted and will trade positively on Monday. We still believe that Euro may touch 1.1880 level before the end of this year. Another two major

trading weeks are pending before everyone starts their holiday mood and we recommend going flat positions after 20 December to 3 January.

On Monday all major currencies will move on both sides.

This is what we mentioned on Tuesday: Tuesday USD lost some value against frontline currencies but gained value against Australian dollar and Canadian dollar. Wednesday we see USD rebounding from lower levels so buy USD or sell Euro, Pound and Franc round higher side.

*Also Yen, Australian dollar and Canadian dollar will lose value but down side is very limited in Yen from here so **short and medium term investors should cover all short positions in Pound.** Emerging market currencies traded mix.*

USD indexes almost fulfilled our predicted target of 88.80, and we don't see it moving above 90.00 at this stage so one can cover all major shorts in currencies with the next two weeks.

Day traders should take advantage of day trading as per the below mentioned ranges.

This is we mentioned on 2 October: On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.

Remember this what we mentioned in the months of July: At this stage USD is trading in a positive direction without any break since the last three weeks. Finally it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.

This is what we mentioned in the month of May 2014: Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

Friday's trading range: (December contract)

DOLLAR INDEX – 88.89 to 88.23

AUSTRALIAN DOLLAR – 0.8323 to 0.8214

CANADIAN DOLLAR – 0.8707 to 0.8635

BRITISH POUND – 1.5771 to 1.5665

EURO – 1.2498 to 1.2365

JAPANESE YEN – 0.8478 to 0.8342

SWISS FRANC – 1.0379 to 1.0263

RUPPEE – 62.63 to 62.37 (Spot)

RAND – 11.80 to 11.55 (Spot)

These trades we recommended on Thursday and same valid for Friday, Trades for Thursday:

Sell currencies around higher levels ranges and buy USD as USD will gain value on Friday

Buy indexes, load up banking stocks on Thursday without waiting any more

Buy orange juice, lumber and cotton in commodities

S&P won't close below 2014, we are recommending buying stocks and indexes fearlessly.

Trade in and out metals and grains

Below few important notes from last two months Flashnews:

Members must remember that S&P is just a few percentage points away from an all-time high. 30 October: ***S&P is back to a few percent away from an all-time high and everyone is wondering whether it will break this new high and move towards 2130. We are aware that most of our members are still trusting and hoping that our target may get achieved by the end of this year. The market tuned around the previous week on Tuesday from 1813 and it has been moving higher non-stop. Short sellers are having nightmares because the market unexpectedly went higher against all odds.***

Commodities are struggling at this stage, except for grains which just bounced back from lows as expected. Energy. Metals and softs are hanging around at the same levels. Commodity stocks are also suffering and we are not expecting any great news at this stage for commodities because our astro indicators are not indicating any supportive sign.

This is what we mentioned on 26 October: ***Wednesday short term traders should book profit but one should buy back on lower side as if S&P holds 1918 level. On Monday we mentioned that S&P would rock if it trade two days above 1918 which may take S&P toward 2000 level.***

Late Wednesday evening we see some profit booking coming back.

This is what we mentioned on 12 October: ***Those who like to trade for longer period can buy market aggressively from 16 October. We still believe that S&P may close around 2130 by end of this year which means that strong rally can take place in market.***

This is what we mentioned on 20 August: ***Soft and grains remained mix, but metals and energy lost value. Era of 1995 to 2000 is back now*** because equity and USD is showing positivity and commodities are struggling.

Hold positions in stocks, avoid commodities, sell bond and one can start buying USD on weakness. Indexes should be in your buying list. Watch our predicted ranges closely, once again 1988 will be crucial level for S&P, 1282 for gold and USD 81.00.

From our book: From here to 15 August markets will trade mix, but surely many stocks will move higher. We will be releasing more five stocks in retirement account in today's stock report. In this year book "2014 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2014", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity.

This is what we mentioned on the 18th of May (two days before the market started rebounding, as we predicted a huge rally starting from the 21st of May in all major indexes): In short, time is running out for most analysts who have been predicting a fall or crash. Investors will miss the opportunity of buying; in fact, they will go in the red if they short stocks and indexes, so we warn these analysts to advise investors carefully. We see a huge move coming from the 21st of May and S&P will achieve 1955 from the current levels of 1870.

In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

Thanks & God Bless, Mahendra Sharma,

11 December 2014, Thursday 3.00 PM, Santa Barbara

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
