Thursday's Flash news (unedited copy)

If you are USA stocks trader then must subscribe stock report as our trading recommendations are provided great returns, and we believe that your subscriptions cost will be recover in one trade

Dear Members,

This week our strong buying recommendations in stocks and USA indexes have done very well. Wednesday was proven very positive days for USA stocks. Tech, financial and biotech stocks made handsome gain. On other hand BRZU and RUSL gained around 15%, these both etfs have been gaining constantly.

Energy and metals were on fire on Wednesday, buying recommendations in energy and energy stocks have done very well. Metals stocks are trading positive and may trade positive for few more days.

Thirty year bond traded mix and currencies moved both sides.

Thursday we may see commodities gaining value but one should book profit on higher levels and stocks positive momentum will continue.

This is what we mentioned yesterday: *Tuesday markets traded mix. Gold, silver and base metals lost value. Energy and energy stocks gained value and dollar lost value. Thirty year gained value on light volume. Stocks are testing investor's patience but investors shouldn't wait much as strong rally is on the way so keep adding stocks in portfolio.*

Wednesday still oil and energy stocks will move higher, one can book profit on higher sides but metals should be in your selling list.

We are sure you must have taken buying positions in market on Tuesday around lower side mentioned ranges, if yes then hold positions tightly.

This is what we mentioned Monday: *Last week the markets move clearly indicated that it was ready for a new era and I have been waiting for this period for a long time. In 2012 when we predicted that S&P would be moving towards 3200 when it was at 1100; I knew that there would be an aggressive rising cycle any time in 2015. I have been watching the rising trend of the market every single day and most of you are witness to this most amazing journey of the bullish cycle of the USA equity market.*

2088 has been a very crucial astro resistance level for S&P and we have been waiting for this since the last 5 months. Today finally S&P closed above 2088 with a strong move and now we are just waiting to see it close above 2088 for two more days which will be the most exciting news for investors as the market may go crazily higher from here.

Commodities are showing positive signs as on Friday metals and energy went higher. Grains and softs traded mixed.

Currencies lost more value and USD is once again back at 100 level.

Last week the equity market traded positively, commodities traded mixed; USD went sharply higher; and Thirty year traded mix. Biotech and tech remained in a positive direction. Financial and other leading stocks remained in a positive direction.

Last week Hong Kong remained in headlines as it went sharply higher. The Hong Kong market has become the third biggest world market by taking over Japan. Financial and tech will hold value. We strongly recommend holding positions in S&P and if S&P closes above 2088 for three days then we may see the USA market creating history.

This is what we mentioned on the 22nd of January and are holding the same predictions: Stocks are trading mixed as some stocks are rising sharply and many are falling. We strongly recommend holding positions in the market as well as our recommended stocks until S&P holds 1982. S&P shouldn't close down below 1982 for more than two days. USA market is volatile but at the same time it has been consolidating around 2000. Tech stocks are performing very well. Precious metals and energy bounced back from lower levels on Monday. Oil held \$44.55 level very well. Grains and soft commodities struggled as predicted.

So far S&P is holding 1982, oil \$44.55 (these are buying levels) and gold has not been able to hold above \$1307, also watch 152 (these are selling level) level for Thirty year.

Here are the trading ranges and strategies for Thursday:

METALS

On Wednesday metals gained value and metal stocks went higher sharply. DUST lost big value and weakness may continue. DUST is good buy for longer term, so one can take positions around \$12.30 if it reaches there.

On Thursday we may see positive trend continuing in metal and metal stocks. Higher side gold will struggle to close above \$1224 so watch this level closely or one can take selling opportunity if gold reaches there. On Thursday gold may reach toward \$1212 and down side \$1195.

Short term is bit positive, but medium and longer term trend is negative yet.

This is what we mentioned 3 March: *Gold is struggling to close above \$1224, silver \$16.98 and copper \$275. These are great selling levels so take an opportunity of selling on Monday*

around the higher sides. We see gold will hold \$1182 but if this level is taken out then gold prices can have a free fall. On the higher side gold will struggle to move above \$1224 so this will be a great level to sell.

This is what we mentioned on the 1st of September: **Gold breached \$1283 level which clearly indicating that is moving toward \$1248 to \$1153 and silver \$17.57 to 14.87 level soon. Metal stocks will also suffer setback.**

Here is Thursday's range: **(May 2015 contract):**

GOLD: \$1209.80 to \$1195.00 June

SILVER: \$16.50 TO 16.20

COPPER: \$275.00 TO \$268.00

PALLADIUM: \$778.00 TO \$768.00

PLATINUM: \$1177.00 TO \$1157.00

INDEXES

On Wednesday was one of the best day for tech, financial and biotech stocks. We strongly recommend holding positions in USA STOCKS and keep adding BRZU, RUSL and INDL.

Avoid European markets and other Asian markets.

On Thursday we see market moving higher without any break, surely some profit booking may arrive at higher levels.

One should book profit in ERX, we recommended buying at \$49 last week and now it reached at \$66.00. We don't see ERX going above \$67.00 and if it does then oil may go toward \$62.80 level but at this stage book profit and stay aside.

In the third day row S&P closed above 2088 which is most powerful and confirming S&P reaching 2178 within the next two weeks.

This is what we mentioned yesterday: *Tuesday stocks traded in narrow ranges with light volume. We recommend traders to keep adding positions in market and our favorite are financial, tech and biotech. Avoid rest of world market but till Brazil and India are our favorite outside of USA.*

This is what we mentioned yesterday: MODNAY most markets traded positive except USA market. Profit booking came in around higher levels but we also recommended buying around lower levels. S&P is good buy from 2085 to 2078, so don't miss this buying opportunity on any weakness on Tuesday.

Most of markets will also trade mix on Tuesday, don't short any market because they are ready to move toward new higher levels.

Out target of S&P is 2118 or higher will fulfil during next week. Astro cycles are showing very encouraging sign.

This is what we mentioned on Friday: **Add more positions in INDL and BRZU. If you are not stock report subscriber then must subscribe as most of stocks recommendations have done amazingly well in the last two years.**

Friday USA MARKET will move higher but some profit booking will come at higher level but watch 2088 level closely. If S&P closes above 2088 for three days will confirm that S&P may high 2178 level very quickly.

Hold investment in stocks.

This is what we mentioned Monday: *Last week markets rebounded from lower levels. Emerging market gained value and among emerging market Shanghai is outperforming. We strongly recommend keep adding positions in INDL and BRZU, also Russian market will start trading stable.*

Emerging market currencies trading positive which clearly indicating that these local market ready to move higher. Also rate cutting and weaker energy cost surely support economy like China and India. In the last six months back YINN "Chinese etf" moved over 70%.

Last week S&P remained above 2042 which is great sign for market and any weakness should be taken as buying opportunity. Monday all major markets will trade both sides.

INDL, BRZU will be great buy on weakness. USA looks great buy once again on any weakness and tech stocks ready to roar. Banking and retailers are ready to take this market toward historic high.

This is what we mentioned on the 12th of December: **S&P broke the most important level of 2014 after breaking \$2033 and now 1988 and 1980 will be great buying opportunities as our astro indicators are not showing any weakness below 1980 so one can start buying on any weakness in stocks and indexes on Monday.**

Here are Thursdays' ranges: **(June contracts)**

HONG KONG (cash) – 27959 to 27600

NIKKEI – 19980 TO 19821

NIFTY S&P (Spot) – 8795 to 8705

CAC – 5188 TO 5132

DAX – 12375 TO 12220

DEX EURO STOXX – 3770 – 3728

FTSE – 7075 TO 6735

FTSE/JSE (Cash) – 47699 to 47230

S&P e-mini – 2111.00 TO 2092.00

NASDAQ 100 e-mini – 4440.50 TO 4400.25

RUSSELL e-mini – 1280.50 TO 1265.00

DOW e-mini – 18105 TO 17970

TREASURY BOND

On Wednesday Thirty year bond traded mix without any directions and same kind of trend will continue. As mentioned previously that bond won't be able to hold above 165 for more than three days so take selling opportunity on any rise.

At this stage everyone is aware that the rate rise is coming in September and that is the reason traders are not taking any big positions in current contracts.

This is what we mentioned on 2 March: *March contract came down to 144 from 152 and June from 171 to 159 in the last ten trading days. TMV and TBT performed well in the last ten days.*

This is what we mentioned on the 2nd of Feb: *Thirty year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 172 (June contract) or the below mentioned higher side ranges.*

Buy call options of Jan 2016 and Jan 2017 in TBT, TMV.

Thursday trading range (June 2015 contract):

TREASURY BOND – 165-05 TO 163.12 (June contract)

SOFT COMMODITIES

On Wednesday softs traded mix, buying is recommended from Thursday so take positions in coffee, cotton and week softs traded as predicted. Coffee is good to buy at \$130, buy also sugar and cotton.

This is what we mentioned last week Tuesday: *Don't go aggressive on softs. Coffee will be good buy on Friday. \$128 level is good buy but breaking \$142 and \$137 put coffee under bearish trend. Astro cycle is turning positive from 15 March for softs and grains so until then trading in and out will remain right strategy.*

Lumber, orange juice and cocoa will keep trading unstable to weaker. Lumber should be in your buying list for the longer term.

Coffee and sugar will move aggressively higher in the coming time. Cotton will trade mixed to negative on Tuesday.

Thursday trading range: (May 2015 Contract)

COFFEE: \$138.00 TO \$133.95

COTTON: \$65.18 TO \$64.20

SUGAR: \$13.26 TO \$12.80

GRAINS

On Wednesday Soy oil went sharply higher as predicted. We strongly see some profit booking coming on higher side of Thursday or Friday in soy oil. Don't short any grains at this stage.

Trading in and out in soy, meal and corn will be the best strategy as per the mentioned below ranges. Some more call options can be added in corn, soy and wheat for December 2015. Don't buy any leverage positions.

This is what we mentioned five months back: *Don't buy any position at this stage but wait for the next week's newsletter for the right advice. Selling recommendations in soy around \$1550, wheat at \$730 have done very well and we targeted Soy to fall below \$1000 and wheat \$550. Both these lower side targets are closer to being fulfilled. Selling grains remained the best advice in 2014, yes gold and silver selling has also done well.*

This is what we mentioned two months back: *Avoid Soy products. We don't see soy going below \$930, wheat \$477 and corn \$330 so go aggressive if prices come to these levels.*

Thursday's trading range (May 2015 contracts):

CORN: \$380.00 TO \$372.00

WHEAT: \$500.00 TO \$488.00

SOY: \$969.00 TO \$963.00

SOY MEAL: \$314.90 TO \$308.30

SOY OIL: \$32.20 TO \$31.64

ENERGY

On Wednesday oil went sharply, higher. Heating oil, RB Gas and energy stocks made handsome gain as predicted. Oil achieved our target of \$55.88, for bullish trend oil has to close above \$55.88 for three days in row and if it fail then once again oil will come down again toward \$50.00.

Our selling recommendations have done very well in oil since July 2014, we were also able to pick bottom at \$44.55 and this recommendations also done amazing well.

Since last week our bullish call on oil, heating oil and RB gas provided great returns but it is time to book profit on Thursday around higher levels.

One can book profit in energy stocks on Thursday and onc go short in few of frontline energy stocks as a hedging trade against buying of tech, financial and biotech stocks.

This is what we mentioned yesterday: *Tuesday oil, heating oil and RB Gas traded positive as predicted. Energy stocks also moved higher. On Wednesday one can book profit on higher levels, also one can book profit in energy stocks when ERX reaches to \$66.00 level.*

This is what we mentioned on last week Thursday: *Wednesday oil prices lost big value, Scorpio Moon impacting more on commodities than stocks. Tomorrow same Scorpio moon can support commodities like oil so we strongly recommend buying oil, RB Gas and heating oil.*

Natural gas will trade positive and energy stocks shall rebound on Thursday so take positions in XOM and CVX.

We recommend booking profit on higher sides or around 55.88. Don't short oil at this stage, watch our range mentioned below for trading strategy.

This is what we mentioned on 5 March: *Monday was positive day for energy but energy stocks acted negatively, we recommend staying away from oil now. Book profit on Tuesday in oil those who bought positions around lower levels. Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors.*

On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching*

toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.

This is what we mentioned last Monday (5th of December): ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gas gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Thursday's trading range **(May 2015 contracts):**

OIL: \$56.90 to \$54.50

NATURAL GAS: \$2.66 to \$2.53

HEATING OIL: \$1.8965 TO 1.8500

RB GAS: \$1.9480 TO \$1.8810

CURRENCIES

On Wednesday currencies traded both sides, we strongly recommend trading in and out in currencies. There will be selling pressure on USD around higher levels but there will be limited higher side in Euro.

Hold buying positions in Yen, and add more. We also recommend trading in and out in most of other currencies on Thursday. Keep adding aggressive positions in emerging market currencies as these currencies will gain value.

Euro will not able to close above 1.12 in the near future so above 1.10 is great short in Euro for medium term traders. Thursday one can trade in and out.

This is what we mentioned Monday: *Friday USD went towards 100 mark again. Euro, Pound, and Franc struggled to move higher. On the other hand Australian and Canadian dollar traded negatively but both these currencies remained very quiet. Emerging market currencies are holding value very well; Russian Rubble keep's moving higher against most of the world's currencies. Rubble has gained almost 18% value.*

On Monday we see dollar remaining in a positive trend so don't short USD or don't buy Euro, pound, Franc, Australian or Canadian dollar but don't miss the opportunity of booking profit in USD above the 100 mark or around the higher side predicted level here.

If USD index trades above 100 for three days than we may see 107 level very quickly. Emerging market currencies will trade positively.

This is what we mentioned on 25 March: *Very rarely can one see this kind of volatility in the currency market. Euro and most of the other currencies went higher sharply and they moved crazily after 4:00pm New York time. Since last week we have been mentioning that Euro won't fall below 1.0388 and we recommended people to book all the profit in currencies for those who had been short for the last 8 months.*

Fall in Euro remain best short term call, after our recommendations it went down more 3500 pips.

Remember this what we mentioned on 5 March: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned last Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell.*

Now Swiss Franc will trade differently and it will be purely move with its own power or weakness. After breaking its pact with Euro, Franc will trade differently. We will question the decision timing because we see a positive trend starting for the European markets so euro may stabilize and Swiss Franc will remain around here or may lose value in the medium and longer term. Read our weekly newsletter closely.

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May 2014: Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

Thursday's trading range: (June 2015 future contract)

DOLLAR INDEX – 99.19 to 98.10

AUSTRALIAN DOLLAR – 0.7705 to 0.7615

CANADIAN DOLLAR – 0.8159 to 0.8055

BRITISH POUND – 1.4921 to 1.4790

EURO – 1.0759 to 1.0595

JAPANESE YEN – 0.8460 to 0.8385

SWISS FRANC – 1.0450 to 1.0340

RUPPEE – 62.42 to 62.20 (Spot)

RAND – 12.18 to 11.99 (Spot)

Thanks & God Bless, Mahendra Sharma,

This is a must have e-book for every institution, broker, trader and investor!
Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

2015 Financial Predictions

www.mahendraprophecy.com

Below are a few important notes from the last two months Flashnews:

This is what we mentioned on the 14th of December: ***We are not changing our outlook on market because still all astro indications are positive, so I would like to wait for more 48 hours before we give clear indications. We still believe that S&P won't close below 1982 for three days in row, and if it does then surely that will be most negative news but happening of this is 1% chances.***

Members must remember that S&P is just a few percentage points away from an all-time high. Mentioned on the 30th of October: ***S&P is back to a few percent away from an all-time high and everyone is wondering whether it will break this new high and move towards 2130. We are aware that most of our members are still trusting and hoping that our target may get achieved by the end of this year. The market tuned around the previous week on Tuesday from 1813 and it has been moving higher non-stop. Short sellers are having nightmares because the market unexpectedly went higher against all odds.***

Commodities are struggling at this stage, except for grains which just bounced back from lows as expected. Energy. Metals and softs are hanging around at the same levels. Commodity stocks are also suffering and we are not expecting any great news at this stage for commodities because our astro indicators are not indicating any supportive sign.

This is what we mentioned on the 26th of October: ***Wednesday short term traders should book profit but one should buy back on lower side as if S&P holds 1918 level. On Monday we mentioned that S&P would rock if it trade two days above 1918 which may take S&P toward 2000 level.***

Late Wednesday evening we see some profit booking coming back.

This is what we mentioned on the 12th of October: **Those who like to trade for longer period can buy market aggressively from 16 October. We still believe that S&P may close around 2130 by end of this year which means that strong rally can take place in market.**

This is what we mentioned on the 20th of August: *Soft and grains remained mix, but metals and energy lost value. **Era of 1995 to 2000 is back now** because equity and USD is showing positivity and commodities are struggling.*

Hold positions in stocks, avoid commodities, sell bond and one can start buying USD on weakness. Indexes should be in your buying list. Watch our predicted ranges closely, once again 1988 will be crucial level for S&P, 1282 for gold and USD 81.00.

From our book: *From here to 15 August markets will trade mix, but surely many stocks will move higher. We will be releasing more five stocks in retirement account in today's stock report. In this year book "2014 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2014", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity.*

This is what we mentioned on the 18th of May (two days before the market started rebounding, as we predicted a huge rally starting from the 21st of May in all major indexes): In short, time is running out for most analysts who have been predicting a fall or crash. Investors will miss the opportunity of buying; in fact, they will go in the red if they short stocks and indexes, so we warn these analysts to advise investors carefully. We see a huge move coming from the 21st of May and S&P will achieve 1955 from the current levels of 1870.

In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
