## Friday Flash news (unedited copy)

### Market traded higher, focus will be on next week FED meeting

Dear Members,

Globally markets are not going anywhere including USA market. S&P is holding 2117 level on down side and higher side it is refusing to move above 2188 level. Today once again S&P bounced back from low of 2115 and tested 2151 level before it settle down at 2144. Nasdaq moved aggressively due to Apple gained more value. We always believe that luck factor plays a key role in peoples or companies time cycle. Circumstance, coincidence or incidence silently comes from back door and change everything suddenly, and at this same is happening with Apple. Launching new Phone, it went on sell and on same time Samsung got hit with bad news with Samsung note 7 battery exploding, what a timing and this shows that luck or positivity on Apple side.

Metals traded negative, energy traded mix and grains gained value. Currencies gained some value but overall trend remain mix. Thirty Year bond remained negative.

On Friday mix kind of trend will continue in USA market but surely rest of global market will open higher on Friday due to solid closing of wall-street. Stay away from any buying in energy and metals.

Buy some positions in currencies around lower levels and stay long in grains. Stay long in Biotech stocks may surprise everyone so watch closely, one can take position in **LABU** 3x etf which can provide nice gain.

This is what we mentioned in our book "2016 Financial Predictions" for the eighth and ninth cycle of market:

#### **Eighth Cycle:**

*From the **17th of July to 27th of August 2016** - This will be a positive or bullish cycle for the markets.*

*We strongly recommend buying and holding positions in the equity market during this cycle. I won't be surprised at all if the market trades towards all-time highs during this cycle. During this period material and mining stocks will also rise which means that energy and metals prices will also move higher. This is a good time to make money in commodities, commodity stocks as well as the emerging markets. **This will be an extremely bullish cycle for all the major markets.***

**Ninth Cycle:**

*From the 28th of August to 22nd of September 2016 - This will be a very volatile cycle, and I do not recommend investors to hold any aggressive positions in the market during this cycle. We do not recommend buying aggressively on any sharp corrections during this cycle. This will be a volatile time cycle and the market may turn negative from the 13th of September. We strongly recommend not trading or going flat in the month of September and holding onto cash so that it can be invested at more appropriate times later during the year.*

This is what we mentioned on last Monday, 8, August: *11<sup>th</sup> August is our date for metals to enter into bear cycle.*

*One prediction so far has started following our astro indicators and that is Thirty Year Bond; we predicted that from 12<sup>th</sup> July 2016 Thirty Year bond trading sharply lower and Bond started trading lower from that day so expect a longer term bear cycle in Bond.*

*Oil is holding \$39.88 level which indicates short term rise and higher side \$44.55/46.87/48.88, S&P is holding 2151 and higher we may see 2195, and gold struggles to move above \$1348/1363 level and lower side \$1312, so these are levels to watched closely.*

**Here are the trading strategy and ranges for Friday:**

**GOLD/SILVER/BASE METALS**

On Thursday metals traded negative but metal stocks remained firm which was bit strange. Gold is keeping trading lower without bounce and we expected this for this week. Stay sideline in metals at this stage. We are recommending any buying in mining stocks.

On Friday more pressure will be witness in metals but day traders can cover around lower side value. Copper remained in positivity, stay long in copper.

Gold will remain in the range \$1330 to \$1305, and silver \$19.35 to \$19.80 at this stage.

Positivity in metals is getting over, only one astro combinations is supporting metals otherwise gold could have come down to \$1250.

Here what we mentioned for last week Wednesday 31 August: *Our view is not changing at all, so great buying opportunity in DUST at \$29.00 level, add some more put options in gold, silver, platinum, palladium and base metals. In this week newsletter we mentioned that metals may trade mix and this would be final week for mix trend before they move toward new lows.*

*You can buy Oct put of \$ \$19.75 in silver at \$0.27, and gold \$1340 at \$13.00. We just bought DUST, and add more small put options of October. Mostly we recommend buying put in metals for Feb 2017.*

Next week looks very negative for metals so plan your trade accordingly. Currently gold is trading \$1354, silver \$20.18, Platinum \$ 1103 and Palladium \$700. Spot gold is \$1349.80. As mentioned gold will have difficult time to hold above \$1348 level (spot price).

Today early we send alert for market and few stocks recommendations, and we are you must have acted accordingly.

This is what we mentioned on 29 August, Monday - **This week has Scorpio Moon from Wednesday so from the middle of the week traders must remain sideways. This is the final stage of one of the best-selling opportunities in metals from the end of this week.**

This is what we mentioned on 11 August: Higher side in gold can rise maximum \$15 from current level of \$1348 and lower side more than \$300 by end of February 2017. Sell more NUGT around \$178 and JNUG around \$320; these levels were the previous highs last month. Add more buying in DUST.

This is what we mentioned on 11 July: Metals positive trend started from early this year and now gold is about to enter into negative cycle next few stages: **11 August, and 29 October.** We still believe that Gold is in a longer term bear cycle and will fall towards **\$775 or lower in 2017** so wait on the side and we are sure you will get a great opportunity to make money.

Take longer term PUT options if you believe in our predictions and we are sure you will mint money by February 2017.

**Friday's trading range: (December 2016 contract):**

**GOLD: \$1327.90 to \$1307.10**

**SILVER: \$19.28 TO \$18.81**

**COPPER: \$217.70 TO \$213.10**

**PALLADIUM: \$665.90 TO \$648.10**

**PLATINUM: \$1047.10 TO \$1024.10**

## INDEXES

On Thursday USA stocks had big rally, tomorrow is expiry day of September futures and options contracts which can bring very low volume without much volatility. On Friday one can sell positions on higher side as markets will trade both sides until this negative time cycle is not getting over. First negative time cycle is ending between 21 to 23 September, and cloud will get 100% clear by 6 October so by this time just remain short term trader.

Trading in and out is our advice for Friday, and book profit in most of the markets on Friday around higher sides. Markets will bounce back from lows of day in Europe but USA will also have very important economic data like Philadelphia FED manufacture Index, PPI, and retail sales.

We still believe that S&P may hold 2117 level and higher side S&P will struggle to move above 2188 level, but as mentioned in the newsletter that until 21-23 September is not over yet, and our aggressive buying date is 6 October so plan your investment carefully.

This is what we mentioned on Tuesday: *On Monday the uncertainty will remain in most of the markets but surely we recommend traders who would like to add small positions for the medium and longer term could easily take very small buying positions.*

***Surely 2117 will be a great level to buy in S&P, but another 10 uncertain days are pending, and also the FED meeting is coming before the negative cycle ends so remain very cautious and stay with light positions. In the worst case scenario S&P may test 2088 level. On Monday one can add call options in the market if the market opens negative. One must buy some positions because 2117 can play the role of a wall. We are not expecting S&P to break 2066 level in the next 24 months so the down side is very limited if you see the higher side which is 3200.***

*Hold UVXY for the short term, as this is a leverage protected trade against the holding of any buying positions.*

This is what we mentioned Monday 8 August: Last week S&P held 2151 level, which clearly gave confidence to investors that a bull market is on the way. Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12<sup>th</sup> February 2016, S&P moved more than 360 points rally which no one expected. Still no one is expecting S&P to hit 2500 by the end of this year and early next year strong rally.

This is what we mentioned on the 29<sup>th</sup> of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

**Friday's trading ranges: (September 2016)**

**HONG KONG (cash) – 23481 to 23001**

**NIKKEI – 16683 TO 16500**

**NIFTY S&P (Spot) – 8795 TO 8711**

**CAC – 4393 TO 4337**

**DAX – 10531 TO 10425**

**DEX EURO STOXX – 3012 – 2971**

**FTSE – 6711 TO 6630**

**FTSE/JSE (Cash) – 46011 to 45621**

**S&P e-mini – 2158.00 TO 2138.00**

**NASDAQ 100 e-mini – 4861.00 TO 4802.00**

**RUSSELL e-mini – 1232.00 TO 1115.00**

**DOW e-mini – 18315 TO 18061**

#### **TREASURY BOND**

On Thursday Thirty Year Bond traded negative, on Friday Bond prices will trade mix so trade in and out. Longer term bear cycle with next target of 162-25 and 157.

Stay long in TTT, TBT and TMV.

This is what we mentioned yesterday: *Our selling recommendation in Thirty Year at 175 did very well. The first lower side target already got achieved and now we may see the second level of 168 being achieved so cover shorts around this level.*

*On Monday we see both sides move in Thirty year but cover some shorts around the lower level without buying any net positions. Trading in and out will remain best strategy.*

*Medium and longer term traders must hold positions in TTT, TBT and TMV, and add some aggressive trades on any weakness.*

**Friday's trading range (September 2016 contract):**

**TREASURY BOND – 167-14 TO 166-03**

#### **SOFT COMMODITIES**

On Thursday softs traded mix, on Friday add more positions in coffee and cotton. Stay sideline in rest of softs. At this still sugar is in our selling list. Today lumber went down so now stay sideline, next important astro level is \$345.

Buy coffee around \$145, cotton \$66.50 and stay softs in rest of softs like sugar, cocoa and orange Juice.

This is what we mentioned last week Monday, 8 August: *Watch \$143 support level for coffee, coffee must hold this level and on the higher side coffee can move towards the astro resistance level of \$154. We are sure you must have booked profit in most of the softs (cotton at \$75.00, coffee \$154, sugar \$19.98, orange juice \$190, and cocoa \$3090), and now is the time to stay away.*

This is what we mentioned on the 26<sup>th</sup> of May: We strongly recommend staying away from any short positions as sugar prices may move towards \$17.65 level and that will be the level to take some short positions with stop-loss of 17.89 and if Sugar start trading above \$17.89 for 26 hours than we may see \$19.98 level.

Coffee prices will hold value on the Down side so one can buy some positions in coffee on Monday. \$128 level will play the resistance level. On the other hand orange juice will move higher but we don't see it moving above 165.00 level so close all positions if you have any in Juice.

Stay short in cocoa and buy coffee as prices will hold \$122 level.

Remember what we mentioned on February 2016 - Coffee will struggle to close above \$118 and \$128. The maximum down side is \$112 or \$109. One can start accumulating coffee with target of \$128. Cotton will struggle to close above \$64.88 and on the down side one can buy around \$57.50. Sugar selling is recommended at \$16.65 buying around \$12.78 to \$12.50 is recommended.

**Friday's trading range: (December 2016 Contract)**

**COFFEE: \$151.50 TO \$148.20 Buying recommended at \$112.50 and \$118.00**

**SUGAR: \$20.71 TO \$20.32 First bought at \$12.78 – Now book profit above \$19.98**

**COTTON: 69.05 TO 67.75 Buy recommended at \$65.00**

## GRAINS

On Thursday grains prices gained value, we still recommend to hold positions in grains and add more positions on Friday around lower sides. **If grains close positive on Friday, then expect big move from current levels. Friday is most important day for grains** and grains must close higher.

Soy will have support at \$935, wheat \$398, and corn \$327. Don't take any aggressive positions in soy oil as it failed to move above \$33.55 level which indicates that it may test 31.10 level.

Major turnaround day in grains will be 23 September.

This is what we mentioned yesterday, 6<sup>th</sup> September: *I was doing some study on soy oil; at this stage we are not recommending any aggressive long but surely once Mars moves out from Scorpio can give new life to soy oil so wait for our final recommendations. \$35.21 will be most*

*interesting level in soy, if it trades above this level for three days then we can expect \$45.55 level.*

*Last week we mentioned trading levels and they are still valid so don't miss the opportunity of buying if grains prices come back to these levels: Medium and longer term traders can buy corn at \$318, Wheat at \$392 and soy at \$945 (all December futures contracts), we don't see these three grains remaining below these levels.*

*Last week on the 9<sup>th</sup> of June, we stated - Buying recommendations in soy and meal from November 2015 have done very well. Corn will struggle to move above \$451, Soy \$1211, and Soy meal \$435; these are the levels to sell.*

This is what we mentioned on the 2<sup>nd</sup> of March 2016: Buy May/Sep 2016 call options in wheat, corn and soy. An interesting trend will develop any time in grains so you must have some positions in grains. 3 March is the turnaround day for grains so plan your trades accordingly. Short term traders can trade in and out.

The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.**

**Friday's trading range (December 2016 contracts):**

**CORN: \$334.25 TO \$325.25**

**WHEAT: \$404.00 TO \$395.00**

**SOY: \$959.00 TO \$947.00**

**SOY MEAL: \$309.90 TO \$305.10**

**SOY OIL: \$32.63 TO \$31.97**

## **ENERGY**

On Thursday energy products traded higher, RB Gas made huge move but oil won't come in bullish trend until it remains below \$44.55 level. On Friday we recommend trading in and out in oil and other energy products. Don't short Natural gas as it has been trading higher and may test \$3.25 level on higher sides.

Trading level in oil is \$44.55 to \$42.68, these both levels are very important one. Also until ERX remains below \$33.00, energy stocks will remain in bear trend. Oil has to remain below \$44.55 level for the three days to confirm that it can achieve \$39.88 level. Major support in oil will come at \$39.88 level so cover 100% short if oil goes there but at this stage we don't see oil going that low. Heating oil and RB Gas will follow oil.

Friday will remain mix day for oil.

This is what we mentioned on for Friday 2 Sep: *On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue on Friday. One can cover 50 to 70% shorts around \$42.61 level in oil, and also one can cover 50% positions in heating oil and RB Gas on Friday. This week our selling recommendations in oil have done very well, and achieved important level of \$44.55 and may test \$42.61 level on Friday or next week.*

*Natural gas will trade mix, and stay away from energy stocks.*

This is what we mentioned 1 August 2016: *Selling oil at \$98.00, covering all shorts at \$44.55 and \$27.71 were best call of last two years in oil. Early this year buying back at \$27.71 with higher side target \$48.88 level. Last month we recommended shorting oil around \$48.88 to \$49.88 levels with target of \$39.88 which got achieved today.*

*On Monday oil, heating oil and RB Gas traded sharply lower. Energy stocks also lost big value, as predicted wait for ERX to test 25.00 level before you take any actions in energy stocks so avoid any buying in energy stocks.*

*Trading in and out is recommended in gas on daily basis, those who like to take sell should wait for another 10% move on higher side in gas, and keep buying on lower side if prices reaches to \$2.63 level.*

*Lower side we see oil moving toward \$39.88, watch this level closely, we don't see oil breaking \$36.55 level in the pending months of 2016. Expect ERX to reach the \$25.00 level and watch if it holds than start buy some positions.*

**Mentioned last month:** *Overall oil won't be able to cross the \$48.88 level and on the down side it may break the \$40.00 level, but cover all shorts around the \$39.88 levels.*

We are not changing any of the predictions we mentioned on the 3<sup>rd</sup> of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it has to close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level and on the down side the important level to buy is at \$44.55. Oil prices have gained almost 70% from \$27.71 which we

called the perfect bottom for oil.

This is what we mentioned on the 2<sup>nd</sup> of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

**A few past important predictions and levels for energy of the daily Flashnews are at the end of this letter.**

**Friday's trading range (All October 2016 contracts):**

**OIL: \$45.59 to \$43.78 October**

**NATURAL GAS: \$3.04 to \$2.93**

**HEATING OIL: \$1.4548 TO 1.4051**

**RB GAS: \$1.4051 TO \$1.3471**

## **CURRENCIES**

On Wednesday most of currencies traded mix, we are still recommending for medium term traders to take positions in Euro, Pound and Rupee. Down side in Japanese Yen will remain limited for medium term but still some weakness is indicating at this stage.

On Friday trade in and out in all major currencies as mentioned below levels, stay side from commodity currencies.

Note – Don't take any aggressive positions in currencies until FED meeting is not over in next week. Trading in and out will remain best strategy.

This is what we mentioned Monday on 29 August: *We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below 0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.*

This is what we mentioned last week on Monday, 25 July: This is what we mentioned on Wednesday, the 13<sup>th</sup> of July: *Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.*

Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list.

On Monday, the 11<sup>th</sup> of April we stated: Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.

A few of the past important predictions and levels for currencies of the daily Flashnews are at the end of this letter.

Friday's trading range: (Septembre futures)

DOLLAR INDEX – 95.61 to 95.07

AUSTRALIAN DOLLAR – 0.7555 to 0.7468

CANADIAN DOLLAR – 0.7629 to 0.7563

BRITISH POUND – 1.3291 to 1.3186

EURO – 1.1274 to 1.1201

JAPANESE YEN – 0.9843 to 0.9732

SWISS FRANC – 1.0343 to 1.0235

RUPEE – 66.95 to 66.65 (Spot)

RAND – 14.35 to 14.11 (Spot)

London	23:16	UK	Rio de Janeiro	19:16	Brazil	New York	18:16	USA	Los Angeles	15:16	USA	Sydney	8:16	Australia
Tokyo	7:16	Japan	Shanghai	6:16	China	Bangkok	5:16	Thailand	New Delhi	3:46	India	Dubai	2:16	UAE

Thanks & God Bless, Mahendra Sharma

**Some past important notes and important ranges from our daily flashnews:**

**From few past Flashnews - important commentary:**

This is what we mentioned on the 18<sup>th</sup> of Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

*Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and*

*making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.*

*After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.*

*There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21<sup>st</sup> of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.*

*Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts.*

### **INDEXES:**

This is what we mentioned on Tuesday, the 25<sup>th</sup> of January: *Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.*

*All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.*

*Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.*

*On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.*

*If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.*

This is what we mentioned the 18<sup>th</sup> of Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26<sup>th</sup> of February 2009. We recommended that the market would bottom out on the 6<sup>th</sup> of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

### **Energy:**

This is what we mentioned Monday, the 21<sup>st</sup> of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

*In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.*

*Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.*

*This is what we mentioned on the 27<sup>th</sup> of August 2015: If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

*We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.*

*This is what we mentioned on the 27<sup>th</sup> of April 2015: Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

*This is what we mentioned on the 5<sup>th</sup> of March 2015: Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

*Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.*

*This is what we mentioned on the 3<sup>rd</sup> of January: **On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

*This is what we mentioned on the 23<sup>rd</sup> of December: **Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

*This is what we mentioned on the 11<sup>th</sup> of December 2014: Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

*This is what we mentioned on the 5<sup>th</sup> of December 2014: **Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

***On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy***

*and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.*

### **Currencies:**

This is what we mentioned last Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

*We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.*

*Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.*

This is what we mentioned on the 22<sup>nd</sup> of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23<sup>rd</sup> of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

***Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.***

Remember this what we mentioned on the 5<sup>th</sup> of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

*Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.*

This is what we mentioned on the 15<sup>th</sup> of Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2<sup>nd</sup> of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

**This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.**

*In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.*

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

**Reading daily range:** When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
