1 April 2016

Fridays Flash news (unedited copy)

S&P holding above 2038 level, and gold is getting tired, day traders can follow our daily ranges closely for trading in and out

Dear Members,

On Thursday the markets traded mixed, dollar lost more value against frontline currencies, and commodities traded mixed; except for gold and silver which closed in the green.

Once again S&P closed above 2038 level which is great news. Thursday was a mixed day and the market traded mixed rather than negatively and closed above 2053 which is positive sign.

Stay away from commodities and get ready to buy USD against frontline currencies in coming time.

Friday is the Job report. It is a mixed day so everything will trade on both sides, so, trade in and out in Indexes, currencies, Bonds and Commodities (Sell commodities on any rise and buy S&P and USA stocks on any sharp corrections on JOB report).

This is what we mentioned 28 March 2016: *Last week we stated: Watch 95.00 to 93.50 level for USD as these are small support point, 2038 for S&P as above this market looks bullish, and \$42.88 to \$43.88 for Oil as oil won't able to move higher so selling is recommended. The Chinese market shall move up aggressively in the coming time so hold positions in Chinese ETF's or ADR's.*

This week on Friday at 4.30 AM Santa Barbara time our Android and iOS app will be ready for use on your hand held device so you can read your letters and manage your subscriptions on your hand held device. Extra features like live quotes, economic calendar, and message alerts will be there. App Download instructions will be there in the launching email on Thursday.

Read one more time our book "2016 financial predictions" and those who are talking negative about market tell them to read our book carefully, it will be worth investing \$199 and these short sellers will save their wealth. I still believe that investing in \$199 in 2016 Financial Predictions shall make fortune if our predictions come true.

<http://www.mahendraprophecy.com/2016-financial-predictions-book.php>

This is what we stated on 19 Feb: *On Tuesday weakness in metal will continue, markets will keep moving higher so no need to book profit and weakness in Dollar will start from here levels so trade accordingly. Once again S&P started trading above 1864 level which is great sign, on other hand oil held \$27.71 and gold failed to close above \$1250 which clearly indicates that astro cycles are working*

well. I had very good time, and I am back with all positive news, Sun have changed house on Monday which is great astro indications and which is very positive for markets so stay long. This is what I mentioned on last week Friday: My problem is that I trust 100% astro cycles, they are not showing market fall in medium and longer term, still bullish astro indicators are intact so how can I advise you to sell everything and get out when I see S&P going to historic high. Yes, S&P broke 1864, which is negative news but current time is volatile time, it is not bear market and same we mentioned in our book. <http://www.mahendraprophecy.com/latest-news.php?id=1050>

On other hand gold moved sharply higher and it achieved higher side mentioned in our book "2016 Financial Predictions" of 2016 high of \$1250. We don't see it remaining above \$1250 but rise in metals was so sharp that many traders must have been gotten out from market. In 2016 metal stocks looks good buy but not at this stage, this time to book profit and get out 100%.

Astro indicators are indicating 91 day's rally starting in all major markets from 3 March 2016 but wait for confirmations in next week Tuesday. Stay long, long positions in market as it is with selling and we will put 100% clear note on Tuesday.

Here below trading strategy and ranges for Friday:

GOLD/SILVER/BASE METALS

On Thursday metals traded mixed in the predicted ranges. Today is the final day for precious and base metals so get ready to sell positions in gold, silver, copper, platinum and palladium before job report. Get out 100% from metals stocks.

A positive time cycle in precious metals is ending today as predicted in this week's newsletter. **If gold and metals rise after the JOB report, then that should be taken as selling opportunity around \$1239 and other metals as well.**

This is what we mentioned for Thursday: We have to remember that gold and silver are in the final 12 to 36 hours of a positive cycle before they end up entering the most negative cycle so be aware of this.

Trade in and out in gold and silver, and hold sell positions in base metals. Stay away or book 100% profit in metal stocks. Gold failed to hold above \$1239 and the lower side support will be \$1195 in the medium term.

This is what we mentioned Monday: *Medium and longer term traders can hold short in precious and base metals. Short term or day traders can trade in and out as per mentioned below ranges. **Stay away or avoid holding any positions in metals. As this week is final week, if you are holding positions in physical gold, then you must get rid of it. International traders who are trading gold in their currency terms should keep selling metals around the higher side ranges. December put options in gold and silver will be great bet.***

On Tuesday Gold, silver, copper, platinum and other base metals should be in your selling list at the higher sides and on the lower side one can cover some positions if you are day traders.

Over all this week - Some support or short term short covering is recommended at \$1195 in gold and on the higher side we don't see gold moving above \$1239 level from here onwards. This should be the high for gold and this high may remain for the rest of this year.

This is what we mentioned 10 March: **Best trade will be buying put options in gold and silver rather than trading with furthers if you don't have long pocket to hold sell. I added some more put options in gold strike price \$1170 of June. We don't see gold trading above \$1250 for more than 11 days, and higher side it won't able to cross \$1280. Lower side is still wide open to \$1042, \$986 and \$892.**

Here is Friday's range: **(May 2016 contract):**

GOLD: \$1241.80 to \$1221.00

SILVER: \$15.57 TO \$15.25

COPPER: \$220.10 TO \$215.30

PALLADIUM: \$572.30 TO \$557.00

PLATINUM: \$981.80 TO \$961.10

INDEXES

On Thursday most of the markets traded mixed. On Friday most of the markets will trade in a tight range. S&P is holding above 2038 level which is great news for buyers, but you have to remain stock specific. On Friday if S&P holds above 2038 then this will very positive news for the bulls.

On Friday we recommend trading in and out. Short term traders can trade in and out, and longer term traders should hold positions as long as S&P holds 2038 and target 2088 levels.

Buy or hold positions in emerging markets and USA markets. **One can sell the European stocks and Indexes as a hedging trade on Friday.**

Apart from USA market, our other favorite emerging markets have moved up big (YINN, BRZU and INDL).

This is what we mentioned yesterday: *Tuesday most of global markets traded mix to directionless but USA market gained handsome value. S&P closed above 2038 which is most exciting news but S&P must close above 2038 for the next three days to give us clear indications of bullish cycle.*

Tuesday move indicates that Wednesday most of markets will trade higher and testing time will be on Thursday. Though we never recommended shorting market and we won't recommend short positions in any market for the next 18 months so our strategy will remain same as buying around lower sides but Thursday of this week will be testing time for S&P. If Thursday S&P close positive, then expect this market to surprise everyone by moving above 2100 and moving toward all-time new high in coming weeks. It looks like that now 2017 and 2088 will be new range for S&P.

*On Wednesday stay long, but day trader can book profit on higher sides. Keep adding **China and India** or these markets etfs. **S&P will have testing time at 2088 because once again S&P strength will be tested at 2088.***

Stay long **DUST, YINN and S&P** on lower sides.

This is what we mentioned on 29 February: *At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.*

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro level will be 2038 and 2088 which has played a crucial role in keeping the bull away for the last 16 months. We are still expecting S&P to touch an all-time high in the month of April so watch this prediction closely.

Past important predictions and levels for indexes of daily Flashnews are at end of this letter.

Here are Friday's ranges: **(June 2016 contracts)**

HONG KONG (cash) – 20988 to 20715

NIKKEI – 17029 TO 16679

NIFTY S&P (Spot) – 7781 TO 7701 Buy at lower sides

CAC – 4384 TO 4339

DAX – 10033 TO 9905

DEX EURO STOXX – 2951 – 2901

FTSE – 6135 TO 6072

FTSE/JSE (Cash) – 46375 to 45891

S&P e-mini – 2062.00 TO 2043.00 Buy at lower sides

NASDAQ 100 e-mini – 4500.50 TO 4455.00 Buy at lower sides

RUSSELL e-mini – 1114.00 TO 1101.00 Buy at lower side

DOW e-mini – 17659 TO 17501 Buy at lower sides

TREASURY BOND

Thirty Year Bond traded positively and the mixed trend will continue in the Asian and European markets, but get ready to sell on any rise in the USA market after the JOB data. The high has almost

been achieved, and now it is time to make some money by selling positions, so sell and hold short positions.

Medium and longer term traders should hold positions in TMV, TTT and TBT. Sell aggressive positions around 165-00 to 166-00 level. On Monday both side moves will come.

Friday's trading range (June 2015 contract):

TREASURY BOND – 165-02 TO 163-25

SOFT COMMODITIES

On Thursday softs traded negatively expect for orange juice. Stay away from any new positions and stay short in cocoa and sugar. One can buy sugar around \$14.45. New positions in coffee should be taken during next week, so hold positions in coffee.

Remember what we mentioned in February 2016 - Coffee will struggle to close above \$118 and \$128. The maximum down side is \$112 or \$109. One can start accumulating coffee with the target of \$128. Cotton will struggle to close above \$64.88 and on the down side one can buy it around \$57.50. Sugar selling is recommended at \$16.65 and buying around \$12.78 to \$12.50 is recommended.

Friday's trading range: (May 2016 Contract)

COFFEE: \$129.00 TO \$125.00 Buying recommended at \$112.50

COTTON: \$59.20 TO \$57.74

SUGAR: \$15.62 TO \$15.08 Buy some at lower levels around \$12.68

COCOA: \$2981 TO \$2914

GRAINS

On Thursday corn lost big value, and the rest of the grains traded mixed to positive. It is a great time to add more positions in grains but wait for one more day. On Monday we shall get ready to buy positions in grains. Wheat, corn and soy meal will be in our watch list.

This is what we mentioned on 2 March 2016: Buy May/Sep 2016 call options in wheat, corn and soy. An interesting trend will develop any time in grains so you must have some positions in grains. 3 March is the turnaround day for grains so plan your trades accordingly. Short term traders can trade in and out.

The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.**

Friday's trading range (May 2016 contracts):

CORN: \$353.25 TO \$345.50 Buy

WHEAT: \$480.00 TO \$462.00

SOY: \$917.00 TO \$900.00

SOY MEAL: \$274.00 TO \$268.00 Buy

SOY OIL: \$34.60 TO \$33.75

ENERGY

On Thursday oil, heating oil and RB gas traded as predicted on both sides. Energy stocks and natural gas remained in a tight range. On Friday we recommend trading in and out by selling at higher levels in oil, heating oil and RB Gas. Buy natural gas but stay away from any new energy stocks positions. One can start taking small buying positions in oil if it's comes around \$36.10 level and at the same time one can cover heating oil and RB Gas.

Energy stocks will trade mix.

We are not changing nay predictions of what we mentioned Tuesday: *Natural gas gained value as predicted but energy stocks traded mix or directionless. On Tuesday same kind of trend will continue in energy so selling is recommended on higher sides in oil, heating oil and RB Gas as prices may come down from higher level as mentioned here below.*

Gas will trade bit positive so weakness should be taken as buying opportunity and energy stocks will lose some value.

On lower side we see astro support for oil is at \$36.20 level so one can add some positions around this levels. Avoid any buying in energy ETF's. ERX has achieved our target of \$25.00 and buying is only recommended at \$20.00. Oil and energy ETF's should spend some time at prices or 10% lower from the current level before we start buying again.

This is what we mentioned 22 March: *Friday oil prices traded mixed without any clear direction. Heating oil and RB Gas were following oil. Energy ETF, ERX has achieved our target of \$25.00 so now is the time to book profit in ERX. We like natural gas and GASL, but wait to buy on any correction. Oil is very close to our most important higher side astro target so start closing long positions. Oil may struggle to move above \$42.88 to \$43.88 so get ready to close all long positions. We recommend closing positions in oil on Monday as our buying recommendations in oil have provided great profit and oil has moved 50% higher from our strong buying recommendations level of \$27.71.*

Natural gas will trade mixed, get ready to buy some positions in gas if it close around \$1.82 to \$1.77.

This is what we mentioned 2 February: *Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels.*

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

Few past important predictions and levels for energy of daily Flashnews are at end of this letter.

Friday's trading range (All May 2016 contracts):

OIL: \$39.00 to \$37.23 May

NATURAL GAS: \$1.99 to \$1.91 May

HEATING OIL: \$1.1971 TO 1.1601 May

RB GAS: \$1.4755 TO \$1.4290 May

CURRENCIES

USD traded negatively on Thursday and it is in the final phase of ending its first downwards bear cycle. Get ready to buy dollar Index aggressively around 93.50, and one can start selling Euro at 1.1475. On Friday one can start selling Australian dollar, Canadian dollar, and New Zealand dollar around the higher side without fail, and hold selling positions.

Euro, Franc and Yen can hold value so don't short these currencies. Pound won't able to move above 1.4600 level, medium and longer term trend in Pound will remain very bearish. Emerging market currencies have done very well. One can book some profit around the lower level on Friday.

This is what we mentioned on Wednesday, 2 March: *I don't know how many traders are watch our emerging market currencies predictions but those who are watching and trading must be amazed because suddenly most of emerging market currencies have taken sharp U turn. Rupee move have surprised many big traders.*

On Thursday we see dollar will get weaker so sell USD on any rise, we don't see USD going above 100.35 level so higher side risk is less and Dollar may see 95.00 or 93.50 in the next three months so stay away from any new buying in USD against frontline currencies. We are strongly recommending to trading in and out in most of frontline currencies.

Hold positions in Emerging market currencies recommendations have done well, and this journey of rising in emerging market currencies have long way to go so hold positions in Real, Rand, Rupee and Peso. Friday one can sell Pound and Yen.

Thursday most of frontline currencies will trade mix, so trade in and out as mentioned below ranges, but watch 98.55 level of USD as dollar may struggle to move above but we are not recommending any short in dollar. Pound will be good sell on any rise and Canadian dollar will be great sell.

Few past important predictions and levels for currencies of daily Flashnews are at end of this letter.

Friday's trading range: (June future contract)

DOLLAR INDEX – 94.83 to 94.15

AUSTRALIAN DOLLAR – 0.7695 to 0.7590

CANADIAN DOLLAR – 0.7751 to 0.7652

BRITISH POUND – 1.4430 to 1.4301 Sell

EURO – 1.1444 to 1.1364

JAPANESE YEN – 0.8932 to 0.8871

SWISS FRANC – 1.0482 to 1.0401 Sell

RUPEE – 66.59 to 66.11 (Spot)

RAND – 14.92 to 14.61 (Spot)

REAL – 3.61 TO 3.56 (SPOT)

31 March 2016, 02.51 PM, Santa Barbara

Some past important notes and important ranges from our daily flashnews:

From few past Flashnews important commentary:

This is what we mentioned 18 Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.

After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.

There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21st of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.

Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will

make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts. The worst case scenario is almost over, and on Monday most of the markets will trade uncertain or will open gap down but won't break their lows. On Monday the USA market will remain closed and on Tuesday the USA market will open.

Important note – In the last 20 years ever since I started representing my view, I haven't seen many investors entering the market at the bottom or selling positions on top. If we see that this is around the bottom, then investors should buy positions here rather than selling everything and getting out. I haven't sold any positions in the stocks I bought last week, and I don't plan to sell them till mid-2017. In the last two weeks my account value has also come down but I am sure it will move up back. The same thing happened when the markets crashed in Augusts and September and the account value of many went down but they bounced back from October.

In the last 16 months' the market hasn't done anything but the time is coming back for us to make money and the market will now start walking with us. Have some patience for the next few days.

Iran Nuclear deal and sections were lifted during this weekend may provide great opportunity in buying oil around lower level on Monday and Tuesday. This is good for world economy as there is one economy now open and corporates are ready to enter Iran. This could be bad news for Saudi and many middle-east oil rich nations because their premium and supremacy will go away.

Monday will be a holiday and we are excited to announce that our book "2016 Financial Predictions" will be out on Monday 10.27 PM Santa Barbara time. This will be a great gift for you and your friends who are looking for the right investment and trading strategy.

Immediately after job data we mentioned this on Friday, 2 October: *Job data unexpectedly came out negative and market came down sharply lower but these lower prices may not able to remain for more than few hours or few days so time to acquire more positions here in USA market. This week on Monday S&P made a low of 1863 level and right now it is trading at 1886 and this level should be held and it won't trade below 1886 for more than three days.*

In 2011 mid-October S&P bottomed out and moved 30% in the 5 months, and every year there on S&P always bottomed out in mid-October and same we are expecting this year to happen as we have been predicting that market should bottom out by 10 or 16 October 2015. We are still expecting huge rally in first quarter of 2016. We are expecting S&P to gain 20% by 2016 March.

Thanks & God Bless, Mahendra Sharma, 7.00 AM Santa Barbara, 2 Oct 2015, 5.45 AM

*This is what we mentioned 2 September: Watch **UVXY** – ultra volatile etf went sharply higher in the month of Mid-August from \$25.00 to \$86.00. Many bear etfs like **RUSS and YANG** are moving up crazily, shorts in these etfs shall provide year results in the next few months.*

Metal:

This is what we mentioned on Friday, 12 Feb: Gold, silver, platinum and palladium achieved top on Thursday. Wed mentioned in our book that we don't see gold going above \$1250 in 2016 and we are still holding same predictions. Gold will not able to close above \$1250 for the next three days.

Metal stocks traded positive, get 100% if you have metal positions. Buy copper on Friday and sell rest of precious metals on Friday around higher sides. Don't hold even one contract of gold because we are not changing our predictions of bear market in gold from here. We never change our predictions because of any short term move in market.

*This is what we mentioned Monday, 8 February 2016: **In 2016, maximum higher side for gold will be \$1250 and lower side \$988 to \$880, and silver \$975 level on lower sides and maximum higher side \$16.35. After five years, gold's time cycle is changing against most of the emerging market currencies so it will start losing value against Rupee, Real, Peso, Rand, Rubble and many other currencies. Gold may lose 20 to 30% value against these currencies. If you are invested in gold in these currency terms, you should get out. This phenomenon will happen for the first time in many investors lives so traders in these countries have to be very careful. Sell gold and buy these emerging market currencies.***

*These levels we mentioned on last week Monday and Wednesday is working very well so far. This is what we mentioned 3 October: **Tuesday one should trade in and out in metals, any rise in Palladium should be taken as selling opportunity, and Palladium won't go above \$720 levels. Get out from metals stocks once HUI reaches to 125 level. Maximum higher side for silver is \$15.95 and gold \$1168 and \$1184 looks difficult to move higher.***

August note: Gold came down from \$1935 TO \$1073, and up 7% from lows but must remember that it is in bear astro cycle.

INDEXES:

*This is what we mentioned on Tuesday 25 January: **Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.***

All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.

Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.

This is what we mentioned 18 Jan 2016: On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.

Now we still don't see any major trend changing pattern even though the market has breached all technical support charts according to most of the analysts. We believe that even the technical charts can turn positive if the market rallies for two weeks. We watch the astro indicators closely so we would like to stand with our reading of our theory or what we have been good at for the last thirty years.

S&P broke 1881, and also went below 1862 level, in fact it made a low of 1848 level and closed at 1875 level which gave many relief. Anyways, those who accumulated stocks and indexes on Friday will be rewarded big because this fall is an intermediate fall not a bear trend. This market is in fear, and no one knows what will happen, yet everyone continues to shout loudly and run here and there, like the people in the classic Godzilla movies. If you ask anyone why they are running away, no one has an answer.

There is no doubt that on Monday when most of the global markets open there will be a lot of fear. Investors won't like to open their trading accounts because of fear, and the fact that they don't want to see a sharp decline in their account value, but believe me this market is providing you with one of the best buying opportunities so don't miss it Monday and Tuesday any below 1864 levels.

This alert was sent yesterday at 8.30 AM on 13 Jan 2016: *Oil is trading around \$30.38, S&P came to 1886, and FANGAM (Facebook, Amazon, Netflix, Google, Apple and MSFT) are trading lower. Earnings in tech stocks are on the way from the Third week of January. I surely recommend betting on Google, Apple, Microsoft, Netflix and Amazon.*

*Oil will hold value, and those who bought oil yesterday can hold positions. S&P may retest 1881 level but you don't want to wait until that price hits. If you ask me the worst case scenario, then it may move towards 1862 but the chances of that happening is very minimum. Currently traders are worried about the technical because the charts turned very ugly and traders, funds and Institutions sell aggressively when charts are negative. However, our astro indicators for the markets are turning positive from the 19 January of so from **now to the 19th of January** will be a great time to acquire positions if you are planning to buy something for the next five weeks or more.*

Here are a few trades that look very attractive:

AMZN: 26 Feb call, strike price \$620 – currently trading at \$23.00

GOOGL: 26 Feb call, strike price \$750 – currently trading at \$23.50

MSFT: 26 Feb call, strike price \$52 – currently trading at \$2.16

APPL: 26 Feb call, strike price \$100 – currently trading at \$3.50

This is what we mentioned last 25 Oct, Monday: **On the higher side S&P has achieved our predicted short term level of 2068 and it may struggle to move above 2088, which is something that we have emphasized since the last quarter of 2014. Book some profit in the market around 2088.**

This is what we mentioned on 1 October, Thursday: **On Wednesday most of markets traded very positive throughout the day without any corrections and volume was also very decent. S&P held 1863 level very well, and trading above 1928 will open avenue to reach 1988 in coming few weeks.**

Thirty Year Bond

This is what we mentioned on 6 October: *Most of you are aware that our Thirty Year Bond selling recommendations are for the medium and longer term. In the last six months a few selling opportunities came at 172 and 162, and we took advantage of selling and did very well. We have been recommending buying TMV but most of you must remember that our recommendations is only for a two year time horizon. Don't make any aggressive short term bets on Thirty Year Bond or TMV.*

Thirty year won't go above 160 level. Right you can accumulate March 2016 put options. We are sure you must be holding positions in TMV and this trade is for the longer term.

This is what we mentioned on 26 June, Friday: *Wednesday Thirty-year bond lost more value, June contract came down to 151 so it lost almost 21 points from 172. Our predictions of Thirty-year bond topping out proven best call and we also mentioned that fortune could be made and we sure many of you must have done amazingly well in this trade in the last three months.*

This is what we mentioned on the 2nd of Feb: *Thirty Year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 172 (June contract) or the below mentioned higher side ranges.*

Grains

*This is what we mentioned on 14 January: **Must buy grains because we see big weather related issues coming from the end of January which could bring disasters to many places on this planet, and any crop damaging news can push prices higher. We have been watching our grains accuracy level very closely, and at this stage our accuracy levels are very high so take advantage of our accuracy level. Trade in and out in wheat and corn, but soy products should be in your buying list on Monday.***

This is what we mentioned on last week 18 December: *Grains are our favorite in 2016. Thursday one can trade in and out. Down side is very limited from current levels so take some buying positions around*

the below mentioned levels in most of the grains, which may provide you with good returns within the next ten days.

*The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see that 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.***

This is what we mentioned on 28 July: ***Time to build long positive so don't miss this opportunity. Last week corn closed around \$375, wheat \$477 and \$880, these are great level to cover 100% shorts in grains.***

Energy:

This is what we mentioned last week Monday, 21 December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on 27 August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

This is what we mentioned on the 27th of April 2015: *Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be***

buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.

This is what we mentioned on the 23rd of December: **Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.**

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: **Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.**

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we mentioned on last week Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned for Tuesday: *Monday most of currencies traded negative against USD. South African Rand is in free fall, and many other South American and South East Asian currencies are also falling sharply lower. Israeli Shekel is ready to make new low and may collapse sharply during this week. Those who invested in our recommendations in USD and USD assets class have done amazingly well in the 18 months. In 2013 and 2014 books we strongly predicted that "Those who invest in USD and USD assets class will survive or will able to perform well", we also stated that going against USD would bring disaster path. Who though that these strong words will turn in to reality. Always most of predictions we make are real, we don't predict to attract anyone and neither we falsely claim. If our predictions goes wrong then we accept our error without any ascus.*

On Tuesday most of currencies will have selling pressure but dollar will struggle to remain able 100 market at this stage so watch closely. Tuesday - Avoid any buying in emerging market currencies, sell Euro, Franc, Pound and Yen. Commodity currencies like Australian dollar will gain value on Tuesday so buying is recommended.

There are chances that South African Rand may collapse and may hit 21.00 level so stay away from Rand and other emerging market currencies for the next 10 trading days.

This is what we mentioned on 22 December: Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.

This is what we mentioned on the 23rd of April: On Wednesday currencies traded both sides, emerging market currencies traded positive. At this stage currency are trading directionless with without any clue so trading in and out will remain best strategy. Thursday profit booking will come in USD but we are not recommending any short in USD but surely one can trade in and out in all major currencies on daily basis, which may provide you great return.

We don't see Euro holding above 1.1278 and don't see dollar Index going below 95.00 level in medium term so remember these figures.

The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March: Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on 15 Jan 2015, Monday: Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.

This is we mentioned on the 2nd of October: On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.

Remember, this is what we mentioned in the month of July: At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market

currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
