Thursday's Daily Stock Report – Unedited copy

WFM, AERG, SNSS performed well

Dear Members,

On Wednesday most of the markets traded mixed as predicted. On Thursday we see a mixed trend for most of the markets but don't miss the buying opportunity around the lower ranges, as on Friday we see the markets moving higher. USA market will open stable but move higher during the second half of the day.

We were talking to a few of our members and it looks like investors are selling and getting away from positions. There is no doubt that booking profit is always good but a store without goods won't earn money. In simple words, keep adding quality stocks to your portfolio as that will make you money for the next two years.

Look at stocks like **PCR**, **DXCM**, **ACHC**, **MSFT**, **INTC**, **AAPL**, **GILD**, **CELG**, **QCOR**, **ITMN**, **JPC**, **CNC**, **THC**, **HUM**, **HZNP**, **PLUG**, **MDVN**, **PBYI** and many other stocks as they have done amazingly well. Please check these stocks list and see which companies

performed in the last 12 months. These stocks created great value and growth in investor's portfolios. Many investors started ignoring stocks

once they started trading with high leverage and volatile futures markets. In yesterday's stock report we recommended buying **WFM, 39.800 +1.305 (+3.39%)** **AEGR 32.475 +1.505 (+4.86%)** and **SNSS 8.250 +0.760 (+10.15%)**, and all three of these recommended stocks performed well.

Today we recommend buying a few of these stocks only for the short term gain however in the longer term these stocks will outperform market: **STT, PGR, PRU, GS** in financial, **IBM, MSFT, GLW, AMOT, NTAP**, and **AMAT** in tech sector. Watch our recommended stocks like **LCI, DEPO, POZN** and **HZNP**. **DEPO** has gained nicely in the last two weeks, and we are still recommend holding positions.

Last year in September we recommended a few stocks. Here is the report:

Housing and financial stocks are around bottom so watch closely. Next Monday we will come out with a complete report on the Housing and Financials. Last year we strongly recommended buying Biotech and technology stocks as both these sectors performed amazingly well. We still believe that tech and biotech will move upside in the medium and longer term. In the end of September and October the new astro combinations will take place for a few days so read our daily report carefully. We still believe that S&P and Nasdaq will gain easily 10% from here onwards.

This is what we mentioned yesterday: *We strongly recommend investing in quality stocks, watch our stock report recommendations very closely. Finally S&P closed above 2000 market first time in history. It has been most interesting time for our work as we our astro cycle theory were able to predict each move from 1100 to 2000. Tech and Biotech stocks remained in demand.*

Most of international markets also traded positive and will get boost on Wednesday from positive closing of USA equity market.

Wednesday market will trade mix so keep adding quality stocks, because market can move sharply higher once Indexes supportive stocks move higher. Watch Microsoft, IBM and Apple closely from 3 September as Mars is changing house which will push NASDAQ sharply higher. It looks like that NASDAQ will take lead from here in coming time so watch tech stocks closely.

On Tuesday **IBM, CME, GMCR Goldman and LCI** performed very well. Other biotech and tech stocks also did very well. We are recommending adding more **IBM, GMCR and CMI**.

On Wednesday for short term trading still you can buy **XOM, WFM, GMCR, V, BWS, COG, STT, MA, ABT, ALXN, DVA, ISRG, JNJ, SPPI, VAR, VRTX, NTAP, DDD, RRD, KR**. These all recommendations are valid for only this week and we are sure you will make some good money.

This is what we mentioned Monday: *Monday USA and European market went higher but rest of other markets remained directions. Today once again we recommend IBM for short, medium and longer term. Apple was our most favorite last years and now IBM have taken place so don't miss opportunity buying opportunity. If you are already holding positions in IBM then you should keep adding it. Time for IBM to break upper level.*

At this stage S&P will hold 1988 level so don't miss buying opportunity in S&P today around lower level. Avoid any positions in emerging market except India. European markets will trade mix but buy Auto and Pharmaceutical will gain in European market so European investors.

On Monday Biotech and banking stocks were in demand, and biotech will keep moving higher. **MDVN, BMY, PCYC, LCI, AEGR, HZNP, IMGX and ARIA** (these are our favorite biotech stocks for the next six months). **Buy LCI for three the next three days, as after earning it will move sharply higher.**

Buy **EXTR** as recommended.

Green Mount Coffee recommendations did well, keep move sharply so hold positions sharply.

Yesterday **GLL, DUST** and **DSL** performed well as predicted. Hold positions in these etfs.

Globally stocks are holding well, and we are waiting to see aggressive moves. Last week globally many markets reached all-time highs, S&P closed around 1988 on Thursday and Friday which is a great sign. Our higher side target got achieved, and now once it closes above 1988 on Monday it will confirm that S&P is heading towards 2038 to 2135 in the coming bullish cycle.

This is what we mentioned on last week Tuesday: *S&P 1905 and NASDAQ 3842/3789 level should be watched closely as we don't see USA market falling much from here. We still hold our prediction of S&P moving towards 2150 by end of this year and NASDAQ 4500.*

You can add more **FCEL, AERG, GMCR, WFM, YHOO and IBM.**

Hold positions in our longer term recommendations of **APPLE, TESLA, INTC, GLW, RFMD, CSCO, ORCL, MSFT, HZNP, FNMA, FMCC, GOLDMAN, MA, V and AMX.** Yesterday two of our recommended stock DEPO and FCEL performed well.

Buy GMCR, Wholefood, DVA, and BAC for the short period. Longer term buying: Keep adding **GLW, RFMD and HZNP.**

This is we what we mentioned on Friday of last week: *Keep adding **TMV, GLL, SOXL** also add more small-cap index TNA, and we still believe S&P will hold 1905 on down side so keep adding low leverage positions on lower sides. Higher side we see 1943 level in the short period.*
