3 June 2016

Friday Flash news (unedited copy)

5th day S&P above 2088 - Open ground without any limit on higher side

Dear Members,

Finally, S&P closed above 2088 for the fifth day in a row, which confirms that some aggressive move is on the way before the market stabilized on higher sides. S&P is getting ready to hit 2117 and 2135 within the next five trading days. Stay long in S&P and NASDAQ.

Currencies remain in a bit of a negative trend due to the Job report tomorrow, as traders don't like to sell USD on the prospect of a strong job number, which can confirm the FED hiking rate in this month.

Commodities remained in mixed directions, but grains were on fire. Soy and soy meal went sharply higher. Our favorite, sugar, also moved big. ECB and OPEC events passed without having any impact either on oil, currencies, commodities, or markets.

After an hour, **AVGO** moved over \$10.00 after earning, which supported many chip stocks that started moving higher. Chip maker **AVGO** is a major supplier to **Apple**.

154.91 ↑0.14 (0.09%) 4:00PM EDT
After Hours : **165.18** ↑10.27 (6.63%) 4:44PM EDT - Nasdaq Real Time Price

I would like bring your attention towards the cloud stock. I will write about this sector in the coming week because since the last five months, we have been aggressively recommending buying cloud stocks. Yesterday, DWRE moved up 55% on the takeover from CRM (Sales Force).

Today, most of the **cloud stocks** were on fire, and we strongly recommend to keep accumulating these stocks. One must subscribe to the stock investment report.

Here is what we mentioned yesterday in the **Daily Stock Investment** report: I have

Demandware, Inc. (DWRE) - NYSE ★ Watchlist
74.81 ↑26.82 (55.89%) 4:02PM EDT

been talking about cloud stocks since the last six months; today, **CRM (Sales Forces) have taken over DWRE** by offering a 55% more than the highest price. DWRE moved 55% higher today. We recommended buying DWRE four months back, and we are strongly recommending to invest in cloud stocks. On Monday, we will write in detail about the Cloud stocks.

Yesterday, we recommended **LABU and REGN**, and both performed well, but **BMV** traded unchanged. **LABU** (Leverage Biotech etf) moved over 10% in the last two trading days.

Many **cloud stocks** like **OLED, DWRE, VEEV, IBM, AMZN, MSFT, GOOGL, PRFT, N, RP, PFPT AND QTWO** performed well lately; a few of these stocks have done very well today.

This is what we mentioned on Tuesday: *Monday most of markets gained value. Now S&P will hold 2088 level so down side is very minimum from here and higher side is at least 2 to 2.5% is pending in the next ten trading sessions. Metals traded mix to negative but bounces back as predicted from lows of Monday.*

Currencies traded negative and Tuesday will trade negative but

late in the hours we may see buying coming. Grains will lose value from higher levels but corn may hold value and on other hand sugar as well as coffee will start gaining value. Sugar may turn very volatile.

Thirty Year bond traded negative and negative trend will continue on Monday. Trading in and out metals is recommended and selling in energy on higher side is recommended on Tuesday or adopt day trading strategy.

This week on Wednesday the Beige book, and on Friday the Job report will play a crucial role for the oncoming FED decisions.

Last week gold struggled and closed sharply lower below \$1215. The next support point is coming at \$1195 and the next resistance point for S&P is coming at 2157 to 2175 level. Short term traders can get ready to book profit here.

This is what stated on Monday, the 23rd of May: *You can follow other indicators but give the astro indicators a top priority for the next 18 months. S&P held 2017 level. It went to 2023 but bounced back strongly and closed above 2037 level. Both these levels are the most important ones and S&P may not break these levels from the 24th of MAY 2016 till 2018.*

At this stage your focus should only be on the market and put most of your money in indexes and stocks. Out of \$100, you must put 70% in equities, 7% short metals, 7% short Thirty-Year bond, and 16% hold cash. The rest of the areas like currencies, softs, grains, and energy will be trading directionless. Many short term trading opportunities will come and we will bring them to your attention when they arise.

This above part has been taken from the weekly newsletter. Subscribe to the weekly newsletter to read the rest.

Stay short in Thirty Year

Keep adding Indexes

Sell more metals on rise

Buy sugar and coffee

Here below trading strategy and ranges for Friday:

GOLD/SILVER/BASE METALS

On Thursday, metals traded mixed without any clear move because every metal trader likes to wait for the **Job Report**. We don't care whatever number comes because we see gold going down in the **medium and longer terms**.

On Friday Gold can rise on any negative number below 150,000; wait for a few hours to sell, or sell if it rises towards the \$1233 level. If the report comes around 100,000 or below, then gold may move sharply higher, and you can wait for a few days to sell. We don't see gold going above \$1248 in many years, so the higher side risk is very limited.

If the numbers come above 170,000, then gold will fall. Watch the \$1195 level closely; if gold breaks the \$1195 level, then we may see a \$1163 level very quickly.

On Friday get ready to sell on any sharp rise after few hours' job report release.

Get ready to sell gold, platinum and silver on rises. Copper will trade positively on Friday. Metals have been trading within the predicted daily ranges.

This is what we mentioned this Monday: *Keep adding DUST, and keep selling JNUG, NUGT, GLD, and GDX.*

During this week the higher side gold will struggle to break \$1231 and on the down side \$1195 will be a small support level for this week. If gold starts trading below \$1195 then expect it to move towards \$1163 level. Silver will follow gold.

Get ready to sell metals on any rise on Friday. From middle of next week big fall in metals is indicating.

Must remembers - Overall trend for medium and longer term is very negative for gold and silver.

This Monday (the 23rd of May) we mentioned this and must remember it: Gold may hold \$1245 level as predicted, and on the higher side gold will struggle to move above \$1263 levels. Gold staying below \$1254 will open the door for \$1195. Gold is still holding above \$1250 level. Last week we provided the final deadline of 21 days for a trend changing indicator, but we don't see gold holding above \$1250 for the 21 days.

This is what we mentioned on the 9th of May: *Monday will be one of the best days to take selling positions in gold, silver, and metal stocks. As mentioned last week, gold will have a difficult time moving above \$1307 and we still believe that gold won't be able to trade above \$1250 for the 11 days.* **NUGT and JNUG** should be in your selling list, and **DUST** still we recommend so hold positions. Gold will have difficult time to hold \$1307 level.

This is what we mentioned on the 10th of March: **We don't see gold trading above \$1250 for more than 11 days**, and higher side we don't see holding above \$1280. Lower side is still wide open to \$1042, \$986 and \$892. In second half of 2016 and early 2017 gold prices will collapse to levels no one sees happening at this stage. Plan your put options strategy well.

Here is Friday's range: (July 2016 contract): Prices will break either side due to job report

GOLD: \$1219.00 to \$1200.80

SILVER: \$16.16 TO \$15.81

COPPER: \$209.00 TO \$205.10 Cover shorts and buy

PALLADIUM: \$538.90 TO \$525.50

PLATINUM: \$971.00 TO \$945.00

INDEXES

On Thursday, ECB and OPEC events passed without any impacting either oil or the markets, currencies, and commodities. S&P finally broke its 18 months of jinx of closing above 2088 for the fifth day in a row. On Thursday, USA market closed higher after trading mixed. On Friday, we see the market moving higher regardless of which number comes from the JOB report.

Last week when S&P was at 2043, we predicted that S&P would achieve 2112 by next week and now is the day for this level to be fulfilled. Friday shall to be a positive day for the market. After the middle of sessions, the market will trade sideways or in a narrow range.

Stay long in most of the global market as well as in the USA market. S&P will hold 2093 and the higher side will be at the 2118 level, so watch closely on Friday. Next week's newsletter will be the most interesting one.

This is what we mentioned on Wednesday: *Tuesday market traded mix as expected and on Tuesday most of markets will trade mix but in USA market we will see buying coming from middle of sessions so lower side buying is recommended.*

On Tuesday S&P went below 2088 for briefly but bounced sharply from that level and closed around 2095, at this stage one must keep adding positions in S&P and most of markets around lower side of Wednesday and Thursday.

Sell energy stocks and sell metals on Wednesday. Great time to buy DUST or sell GDX around higher level on opening.

We want S&P to close above this level for three to five days above 2088 to confirm the next level of 2157 to 2175 level so wait for Tuesday and Wednesdays closing.

Globally the markets gained but China remained very quiet. The Indian market acted very hot and aggressively.

This is what we mentioned on Monday (the 23rd of May): On Monday we are expecting a mixed day with some volatility. There may be some sudden news related move in the market because this is the final day for all the negativity to end. From Tuesday onwards we see a very strong momentum starting in the market.

We strongly recommend taking short term positions in Nikkei, Indian, Shanghai, and European markets. NASDAQ looks like a great buy among USA indexes. S&P also looks like a great buy due to the fact that financials are getting ready to run.

Stay on the sideline's on Monday and watch markets trend. Tuesday will be the day to acquire positions. Plan your strategy well because if we are right in our reading then you will make tons of money in the coming time.

It looks like that S&P may break 2088 higher level and may start trading above 2100 from next week, during this week or next week and on the down side it will hold 2037 level.

The most exciting journey is about to begin for investors and this will be one of the most memorable moves which history may remember.

Many great tech and financial are at buy, FMCC and FNMA are great buy, we recommended buying both these in last week stock report.

This is what we mentioned on the 29th of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in

the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro level will be 2038 and 2088 which has played a crucial role in keeping the bull away for the last 16 months. We are still expecting S&P to touch an all-time high in the month of April so watch this prediction closely.

Past important predictions and levels for indexes of daily Flashnews are at end of this letter.

Here are Friday's ranges: **(June 2016 contracts)** Prices will break either side due to job report

HONG KONG (cash) – 20995 to 20791

NIKKEI – 17001 TO 16821

NIFTY S&P (Spot) – 8261 TO 8181 Buy at lower sides

CAC – 4497 TO 4445

DAX – 10305 TO 10205

DEX EURO STOXX – 3054 – 3025

FTSE – 6255 TO 6171

FTSE/JSE (Cash) – 47951 to 47575

S&P e-mini – 2112.50 TO 2095.75

NASDAQ 100 e-mini – 4555.00 TO 4515.00

RUSSELL e-mini – 1177.00 TO 1163.00

DOW e-mini – 17921 TO 17755

TREASURY BOND

On Thursday, the Thirty Year Bond moved sharply higher; once again it is trying to test the 166 level, and we still believe that it won't be able to cross it, so get ready to take selling positions. Friday will be the best day to take selling positions.

Our next two months' target in the Thirty Year is with the target of 160 and 154. Stay long in TTT, TMV and TBT.

Friday's trading range (June 2015 contract): Prices will break either side due to job report

TREASURY BOND – 166-21 TO 165-05

SOFT COMMODITIES

On Thursday, coffee and sugar gained value. Sugar moved sharply higher as expected, and we still recommend adding more coffee. Hold positions in sugar as we see it moving toward \$20.00 as predicted. Our recommendations of buying sugar from the \$12.83 level have done very well. Stay away from cotton, cocoa, lumber, and orange juice.

Coffee is ready to move big and may surprise everyone. Coffee has been trading tight between the \$120 to \$122 levels.

The rest of the softs will trade negatively. Watch the \$17.86 level as sugar closing above \$17.86 will push the prices up to \$20.00. The next turnaround date for coffee is the 3rd of June 2016. Coffee is ready to move big.

This is what we mentioned on Monday: We strongly recommend staying away from any short positions as sugar prices may move towards \$17.65 level and that will be the level to take some short positions with stop-loss of 17.89 and if Sugar start trading above \$17.89 for 26 hours than we may see \$19.98 level.

Coffee prices will hold value on the Down side so one can buy some positions in Thirty Year on Monday. \$128 level will play the resistance level. On the other hand orange juice will move higher but we don't see it moving above 165.00 level so close all positions if you have any in Juice.

Stay short in cocoa and coffee as they will hold \$122 level.

Overall Monday will remain a mixed day for softs.

Remember what we mentioned in February 2016 - Coffee will struggle to close above \$118 and \$128. The maximum down side is \$112 or \$109. One can start accumulating coffee with target of \$128. Cotton will struggle to close above \$64.88 and on the down side one can buy around \$57.50. Sugar selling is recommended at \$16.65 buying around \$12.78 to \$12.50 is recommended.

Friday's trading range: **(July 2016 Contract)**

COFFEE: \$126.05 TO \$122.65 Buying recommended at \$112.50 and \$118.00

COTTON: \$63.45 TO \$62.35

SUGAR: \$18.34 TO \$17.81 First bought at \$12.78

COCOA: \$3077 TO \$3031

GRAINS

On Thursday, soy, meal, and wheat moved higher. Corn and soy oil remained in a mixed trend without moving in any direction. Soy and soy meal prices moved more than 4% and almost moved to a multi-year high.

We are not recommending any buying at this stage; those who sold today can hold selling positions. Soy Meal closed at \$419. Sell around here and the target is the \$375 level within the next one month, so a great amount of money can be made. Soy can test the \$1151 level; sell or buy put which will lock your risk; we see it may move down toward \$1073 within the next three weeks.

Stay away from wheat and corn at this stage. Some weaknesses will come in wheat, so don't buy wheat this stage. Trade in and out in corn at this stage.

We are strongly recommending buying in **Soy oil** from today.

Buying recommendations in soy and meal from November 2015 have done very well. Corn will struggle to move above \$431, Soy \$1152, and Wheat \$497, and Soy meal \$419; these are the levels to sell.

This is what we mentioned on the 2nd of March 2016: Buy May/Sep 2016 call options in wheat, corn and soy. An interesting trend will develop any time in grains so you must have some positions in grains. 3 March is the turnaround day for grains so plan your trades accordingly. Short term traders can trade in and out.

The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.**

Friday's trading range **(July 2016 contracts):**

CORN: \$420.50 TO \$410.25

WHEAT: \$493.00 TO \$478.00

SOY: \$1157.00 TO \$1128.00

SOY MEAL: \$423.90 TO \$408.50

SOY OIL: \$32.83 TO \$32.02

ENERGY

The OPEC event went without any major news. Oil is trading around \$50, so why will OPEC make any changes? In fact, they should be happy that oil came back sharply from \$27.71. If oil was trading around \$30.00, then surely OPEC might have done anything to boost prices.

On Thursday oil prices traded mixed with all the other energy futures. Natural gas moved up. We are not changing any predictions; we recommend trading in and out will remain the best strategy. In the last ten days, trading in and out provided a nice profit on a daily basis, and we recommend the same for Friday. Avoid any buying in energy stocks.

We still believe that \$48.88 is the most powerful astro level, and we don't recommend taking any new positions, but we've done very well in buying oil at \$27.71. We recommended booking profit in parts at \$38.88, \$44.88 and \$48.88. There are chances that oil may test the \$52.55 level, so either you trade in and out with the levels mentioned in our daily Flashnews, or simply stay away. Stay away from heating oil and RB Gas.

Natural gas moved higher; selling is recommended at the \$2.48 levels.

Stay away from energy stocks. The \$46.11 level is good, and those who sold oil should wait for the buyback around the \$44.55 level. At this stage, remain a short term trader.

Energy stocks will trade mixed to directionless; we are not recommending any positions in energy stocks. We are not changing any of the predictions we mentioned on Tuesday: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it has to close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

On Wednesday finally oil prices closed above \$48.88 level, we won't recommend any trade until it doesn't close above \$48.88 for the next three trading sessions. Closing above \$48.88 level will push oil toward \$52.55 level. RB Gas and Heating oil will trade mix, higher side one can nook profit. Trading in and out in oil will remain best strategy.

On Thursday we are recommending taking some sell positions on higher sides or just trading in and out.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level with stop-loss of \$49.59 and on the downside the important level to buy is at \$44.55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2nd of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

A few past important predictions and levels for energy of the daily Flashnews are at the end of this letter.

Friday's trading range (All July 2016 contracts):

OIL: \$49.81 to \$48.05

NATURAL GAS: \$2.45 to \$2.34

HEATING OIL: \$1.5333 TO 1.4815

RB GAS: \$1.6575 TO \$1.6025

CURRENCIES

On Thursday, dollar moved a bit higher due to expectations of the FED hiking rate. Dollar will remain on the higher sides; we are not expecting dollar to move above the 96.55 level, so watch this level closely.

We recommend buying Australian dollar and trading in and out in most of the currencies. Euro, Franc, and Canadian dollar will trade on both sides. Buy these currencies if they move sharply lower; wait for a few hours after the job report... or you can buy next week. On the higher side, dollar may achieve the 96.55 level, and this will be the level to book profits.

We are still recommending to hold buying in emerging market currencies and add more aggressive positions. Pound shall be a good buy here. In fact, most of the currencies should get stabilized around today's lower levels, and may start rebounding.

This is what we mentioned last Wednesday: *Wednesday most of currencies gained value and Thursday also we see some weakness in USD. As mentioned, we don't see dollar moving above 96.50 level and down side it won't go below 92.50 so remember these both levels when you planning to takes some trades for medium term.*

Buy in British Pound have done very well on Tuesday and Wednesday. On Thursday we recommend booking profit in Pound around higher sides or at 1.4801 level.

One can sell Swiss Franc and Euro on any rise but down side will remain very limited in Euro. Hold sell in Swiss Franc or add more sell on Thursday.

Yesterday we recommended covering shorts in Commodities currencies (Australian dollar and Canadian dollar), and taking small buying and still we recommend you can take this trades.

We are sure you must have taken buying in emerging market currencies, we are highly recommend taking sell in USD against emerging market currencies. Next week will be very positive for emerging market currencies. Thursday will mix to positive day for emerging market currencies.

On Monday, the 11th of April we stated: Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 93.50 level so watch USD trend closely, and start taking positions at 93.50 level. Euro and Franc may hold value on Monday but most of the other currencies will lose value against USD from middle of Monday so great time to sell positions in most of other currencies.

Japanese Yen has been gaining value, and we see Yen gaining value in the coming days so don't short Yen, one can buy Yen around lower side ranges and target it to move towards 0.9255 level and that should be the high of 2016.

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level. Wednesday will be right day to build some short for medium term positions in these currencies.

A few of the past important predictions and levels for currencies of the daily Flashnews are at the end of this letter.

Friday's trading range: (June) Prices will break either side due to job report

DOLLAR INDEX – 95.93 to 95.23

AUSTRALIAN DOLLAR – 0.7278 to 0.7165

CANADIAN DOLLAR – 0.7657 to 0.7601

BRITISH POUND – 1.4521 to 1.4359

EURO – 1.1199 to 1.1095

JAPANESE YEN – 0.9223 to 0.9119

SWISS FRANC – 1.0155 to 1.0081

RUPEE – 67.45 to 67.01 (Spot)

RAND – 15.65 to 15.47 (Spot)

REAL – 3.60 TO 3.56 (SPOT)

Thanks & God Bless, Mahendra Sharma

2 June 2016, 03.21 PM, Santa Barbara

Some past important notes and important ranges from our daily flashnews:

From few past Flashnews - important commentary:

This is what we mentioned on the 18th of Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.

After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.

There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21st of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.

Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts.

Metal:

*This is what we mentioned Monday, the 8th of February 2016: **In 2016, maximum higher side for gold won't able to trade above \$1250 and lower side \$988 to \$880, and silver \$975 level on lower sides and maximum higher side \$17.35. After five years, gold's time cycle is changing against most of the emerging market currencies so it will start losing value against Rupee, Real, Peso, Rand, Rubble and many other currencies. Gold may lose 20 to 30% value against these currencies. If you are invested in gold in these currency terms, you should get out. This phenomenon will happen for the first time in many investors lives so traders in these countries have to be very careful. Sell gold and buy these emerging market currencies. August note: Gold came down from \$1935 TO \$1073, and up 7% from lows but must remember that it is in bear astro cycle.***

INDEXES:

*This is what we mentioned on Tuesday, the 25th of January: **Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.***

All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.

Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.

This is what we mentioned the 18th of Jan 2016: On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.

Thirty Year Bond

This is what we mentioned on the 6th of October: Most of you are aware that our Thirty Year Bond selling recommendations are for the medium and longer term. In the last six months a few selling opportunities came at 172 and 162, and we took advantage of selling and did very well. We have been recommending buying TMV but most of you must remember that our recommendations is only for a two year time horizon. Don't make any aggressive short term bets on Thirty Year Bond or TMV.

Thirty year won't go above 160 level. Right you can accumulate March 2016 put options. We are sure you must be holding positions in TMV and this trade is for the longer term.

This is what we mentioned on the 26th of June, Friday: Wednesday Thirty-year bond lost more value, June contract came down to 151 so it lost almost 21 points from 172. Our predictions of Thirty-year bond topping out proven best call and we also mentioned that fortune could be made and we sure many of you must have done amazingly well in this trade in the last three months.

This is what we mentioned on the 2nd of Feb: Thirty Year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 172 (June contract) or the below mentioned higher side ranges.

Grains

*This is what we mentioned on the 14th of January: **Must buy grains because we see big weather related issues coming from the end of January which could bring disasters to many places on this planet, and any crop damaging news can push prices higher. We have been watching our grains accuracy level very closely, and at this stage our accuracy levels are very high so take advantage of our accuracy level. Trade in and out in wheat and corn, but soy products should be in your buying list on Monday.***

This is what we mentioned on the 18th of December: Grains are our favorite in 2016. Thursday one can trade in and out. Down side is very limited from current levels so take some buying positions around the below mentioned levels in most of the grains, which may provide you with good returns within the next ten days.

*The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see that 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.***

This is what we mentioned on the 28th of July: ***Time to build long positive so don't miss this opportunity. Last week corn closed around \$375, wheat \$477 and \$880, these are great level to cover 100% shorts in grains.***

Energy:

This is what we mentioned Monday, the 21st of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on the 27th of August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

This is what we mentioned on the 27th of April 2015: ***Adopt trading in and out strategy in energy, but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.*** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: ***Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.***

This is what we mentioned on the 5th of December 2014: ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we mentioned last Thursday: ***Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.***

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned on the 22nd of December: ***Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.***

This is what we mentioned on the 23rd of April 2015: ***The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.***

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March 2015: ***Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.***

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on the 15th of Jan 2015, Monday: ***Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one***

interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
