Friday's Flash news (unedited copy)

Dear Members,

On Thursday Market treaded mix, European market closed all time high. DAX remained in demand as European zone stabilizing and showing better outlook for future. Euro collapse to new as predicted, our targets are achieving and now next one 1.0788 should get achieve soon. Swiss Franc also lost 2000 points from top of last month. Rest of world currencies are under pressure due to rising momentum of USD. This move of USD of last 8 months remain one of the best gained in history.

Other commodities traded negative, and thirty year also remained directionless. Add more positions in DAX on any weakness, and USA market will remain in bullish tone until S&P holds 2088. We are still hopeful of USD achieving 2178 if its closes above 2118.

Wednesday market came down on profit booking and negative data. As predicted in this week newsletter that emerging countries would start cutting interest rate and we saw China and Indian doing this. RBI cut rate yesterday but market failed to hold value.

This is what we mentioned on 22 January and holding same predictions: *Stocks are trading mixed as some stocks are rising sharply and many are falling. We strongly recommend holding positions in the market as well as our recommended stocks until S&P holds 1982. S&P shouldn't close down below 1982 for more than two days. USA market is volatile but at the same time it has been consolidating around 2000. Tech stocks are performing very well. Precious metals and energy bounced back from lower levels on Monday. Oil held \$44.55 level very well. Grains and soft commodities struggled as predicted.*

So far S&P is holding 1982, oil \$44.55 and gold has not been able to hold above \$1307. Also watch 152 level for Thirty year.

Here are the trading ranges and strategies for Friday:

METALS

Thursday was positive astro day for metals but they failed to perform positively which is making us very nervous now. This positivity will end on Friday morning in New York around 10.45 AM so watch metals move. Those who are shorts in metals should old positions tightly.

Higher will remain limited in metals. Metals stocks will struggle, DUST and GLL performed very well as predicted. Gold has three major astro support point, \$1193, 1182 and \$1143, what

these levels closely. On higher side astro resistance \$1212 and 1221. Worst case scenario \$1247.

This is what we mentioned Wednesday: *Gold is struggling to close above \$1220, silver \$16.98 and copper \$270. These are great selling levels so take an opportunity of selling on Monday around the higher sides.*

Avoid or sell metal stocks or buy DUST at this level and expect it to move at least 30% higher.

We see gold will hold \$1182 but if this level is taken out then gold prices can have a free fall. On the higher side gold will struggle to move above \$1220 so this will be a great level to sell.

This is what we mentioned three week back Tuesday: *Gold touched our predicted higher side level of \$1307 and lost big value from there. Now traders should watch \$1183 and \$1142 levels closely, gold shouldn't close below these levels. Now \$1242 is a great selling level in gold and \$1200 is astro support level so keep these figures in mind.*

This is what we mentioned on the 1st of September: **Gold breached \$1283 level which clearly indicating that is moving toward \$1248 to \$1153 and silver \$17.57 to 14.87 level soon. Metal stocks will also suffer setback.**

Here is Friday's range: **(May 2015 contract):**

GOLD: \$1205.90 to \$1191.20 April

SILVER: \$16.35 TO 15.90

COPPER: \$267.00 TO \$262.20

PALLADIUM: \$827.00 TO \$818.00

PLATINUM: \$1187.30 TO \$1167.00 April

INDEXES

On Thursday European market moved up aggressively higher. On Friday Job report will move market aggressively on both sides, buy on any weakness as market won't be able to hold on lower sides yet.

Rest of world markets will also trade positively so don't short European markets but avoid any positions in emerging market except India. Our astro cycles are still very positive for Japan, Europe and USA, so hold positions tightly.

This is what we mentioned Wednesday: *We strongly recommend trading in and out. Still markets can trade in the tight range until S&P hold 2088 and we see S&P holding 2088. Thursday will be great day to take short term buying positions in market around lower sides. One can also buy on Wednesday.*

Avoid rest of world markets.

We are waiting S&P to close above 2118 because if this number taken out then S&P will easily move toward 2178.

This is what we mentioned on the 12th of December: ***S&P broke the most important level of 2014 after breaking \$2033 and now 1988 and 1980 will be great buying opportunities as our astro indicators are not showing any weakness below 1980 so one can start buying on any weakness in stocks and indexes on Monday.***

Oil's negative trend should start playing the biggest role for the market consumer and corporates of America, India, Japan and China, and this will be key reason to push S&P toward 3200.

Here are Fridays' ranges: (March **contracts**)

HONG KONG (cash) – 24350 to 24080

NIKKEI – 18950 TO 18709

NIFTY S&P (Spot) – 9018 to 8860

CAC – 4970 TO 4920

DAX – 11570 TO 11403

DEX EURO STOXX – 3623 – 3588

FTSE – 6975 TO 6899

FTSE/JSE (Cash) – 47335 to 46925

S&P – 2109.00 TO 2093.00

NASDAQ – 4470.50 TO 4435.25

RUSSELL – 1237.50 TO 1227.00

DOW – 18190 TO 18050

TREASURY BOND

Thirty year bond traded mix on Thursday, We highly recommend taking more sell positions on any rise after Job report around higher sides. Keep adding TMV and TBT.

This is what we mentioned Wednesday: *On Monday bond will start trading negatively so the best time to add more selling positions in Thirty Year Bond will be on Monday. Add more TMV and TBT. Short term trading strategy should remain trading in and out and longer term traders should hold positions tightly in TBT, TMV and puts in thirty year.*

This is what we mentioned last Monday: *March contract came down to 144 from 152 and June from 171 to 159 in the last ten trading days. TMV and TBT performed well in the last ten*

days. More weakness is still on the way but cover some part of positions around 143 if you are short term trader.

This is what we mentioned on 2 Feb: *Thirty year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 152 or the below mentioned higher side ranges.*

Buy call options of Jan 2016 and Jan 2017 in TBT, TMV.

Friday trading range (March 2015 contract):

TREASURY BOND – 145-27 TO 144-20

TREASURY BOND – 159-12 TO 158-00 (June contract)

SOFT COMMODITIES

On Thursday softs traded negative, we recommend buying coffee and sugar, and avoid rest of softs or trade in and out as mentioned below ranges. Hold positions in coffee and get ready to buy sugar on Friday. Avoid rest of softs.

This is what we mentioned yesterday: *Don't go aggressive on softs. Coffee will be good buy on Friday. \$128 level is good buy but breaking \$142 and \$137 put coffee under bearish trend. Astro cycle is turning positive from 15 March for softs and grains so until then trading in and out will remain right strategy.*

Lumber, orange juice and cocoa will keep trading unstable to weaker. Lumber should be in your buying list for the longer term.

Coffee and sugar will move aggressively higher in the coming time. Cotton will trade mixed to negative on Tuesday.

Friday trading range: (May 2015 Contract)

COFFEE: \$138.00 TO \$132.90

COTTON: \$63.80 TO \$62.70

SUGAR: \$13.71 TO \$13.32

COCOA: 3019 TO 2962

GRAINS

On Thursday grains traded negative, we recommend buying some positions around lower sides on Friday. For day traders we recommend trading in and out as mentioned below ranges.

Best time to acquire positions in grains will be 15 March 2015.

This is what we mentioned Friday: ***Best time to start accumulate grains in the month of March, and until then trade in and out.***

This is what we mentioned four months back: *Don't buy any position at this stage but wait for the next week's newsletter for the right advice. Selling calls in soy around \$1550, wheat at \$730 have done very well and we targeted Soy to fall below \$1000 and wheat \$550. Both these lower side targets are closer to being fulfilled. Selling grains remained the best advice in 2014, yes gold and silver selling has also done well.*

This is what we mentioned two month back: *Avoid Soy products. We don't see soy going below \$930, wheat \$477 and corn \$330 so go aggressive if prices come to these levels.*

Friday's trading range **(May 2015 contracts):**

CORN: \$393.00 TO \$385.50

WHEAT: \$486.00 TO \$473.00

SOY: \$998.00 TO \$977.00

SOY MEAL: \$329.00 TO \$320.00

SOY OIL: \$32.00 TO \$31.10

ENERGY

Oil and natural gas traded bit positive compare to RB gas and heating oil. On Friday we recommend trading in and out without taking any side trade. We recommend taking some short positions in RB gas and Heating oil against buying of Natural gas.

Keep adding short positions in natural gas.

Don't touch energy stocks, take selective short positions in energy stocks if you like to buy some oil positions on weakness or lower sides.

This is what we mentioned yesterday: *Monday was positive day for energy but energy stocks acted negatively, we recommend staying away from oil now. Book profit on Tuesday in oil those who bought positions around lower levels. Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors.*

On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on 3 January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December: ***Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.***

This is what we mentioned last Monday (5th of December): ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Friday's trading range **(March 2015 contracts):**

OIL: \$52.19 to \$49.75 **April contract**

NATURAL GAS: \$2.89 to \$2.77

HEATING OIL: \$1.9070 TO 1.8410

RB GAS: \$1.9270 TO \$1.8610

CURRENCIES

We are not changing any predictions in currencies as selling Euro predictions have done miracle for investors those who believed in our predictions for rise in USD and collapse in euro and Yen.

It was not guessing trade, and none of our predictions are guessing, we put our hard work to analyzing hidden wave of nature which we discover from astro cycles.

Don't touch Euro, Franc, and Canadian or Australian dollar. Also avoid Yen and emerging market currencies for one more week. Start covering some short positions in euro but don't buy any positions.

Hold sell positions in euro as our predicted target of 1.0788 will fulfill soon.

Read again, what we mentioned yesterday: *Tuesday USD and most of currencies traded mix and same kind of trend will continue. USD getting ready to cross 95.55 but it has to close above 95.55 for two days to give confirmations of it reaching around 97.88 level. We are not changing any predictions of what we mentioned yesterday.*

Compare to stronger USD, we see weaker Euro and Franc which will put USD toward new high. Japanese Yen and Pound will trade negative also on Tuesday.

Australian and Canadian dollar will trade negative.

Emerging market currencies will trade positive to mix, we are not recommending any trading positions for this week.

This is what we mentioned Monday: **Wednesday currencies traded positive, USD lost some value and we recommend holding positions in USD or adding USD around 94.00 levels. Next week USD may hit back 95.50 and Euro will touch decade lows.**

We recommend selling Euro, Franc, and Australian and Canadian dollar on higher side predicted prices here below. Some buying is recommended in Pound and Yen around lower sides.

Emerging market currencies will trade mix. Euro is ready to break 1.10 and Franc below par value in coming few weeks so hold your trade.

Remember this what we mentioned on last week Thursday: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but eventually dollar will break 95.50 and move towards 102.70 later this year. On the other hand euro will move towards 1.0730.*

On Monday we see a mixed trend in currencies, so trading in and out is recommended. Japanese Yen and Pound will gain value. Emerging market currencies will lose some value. During the last hour of trading one can take some selling positions in Euro and Franc.

Australian and Canadian dollar will lose value so stay away from both these currencies.

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on last Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one*

interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell.

Now Swiss Franc will trade differently and it will be purely move with its own power or weakness. After breaking its pact with Euro, Franc will trade differently. We will question the decision timing because we see a positive trend starting for the European markets so euro may stabilize and Swiss Franc will remain around here or may lose value in the medium and longer term. Read our weekly newsletter closely.

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May 2014: Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

Friday's trading range: **(March 2015 future contract)**

DOLLAR INDEX – 96.72 to 95.97

AUSTRALIAN DOLLAR – 0.7820 to 0.7720

CANADIAN DOLLAR – 0.8043 to 0.7960

BRITISH POUND – 1.5278 to 1.5180

EURO – 1.1090 to 1.0959

JAPANESE YEN – 0.8352 to 0.8279

SWISS FRANC – 1.0319 to 1.0230

RUPPEE – 62.57 to 62.23 (Spot)

RAND – 11.91 to 11.77 (Spot)

Thanks & God Bless, Mahendra Sharma,

This is a must have e-book for every institution, broker, trader and investor!
Make wave of nature/astronomical cycle an integral part of your
trading/Investment strategies!

2015 Financial Predictions

www.mahendraprophecy.com

Below are a few important notes from the last two months Flashnews:

This is what we mentioned on the 14th of December: ***We are not changing our outlook on market because still all astro indications are positive, so I would like to wait for more 48 hours before we give clear indications. We still believe that S&P won't close below 1982 for three days in row, and if it does then surely that will be most negative news but happening of this is 1% chances.***

Members must remember that S&P is just a few percentage points away from an all-time high. Mentioned on the 30th of October: ***S&P is back to a few percent away from an all-time high and everyone is wondering whether it will break this new high and move towards 2130. We are aware that most of our members are still trusting and hoping that our target may get achieved by the end of this year. The market tuned around the previous week on Tuesday from 1813 and it has been moving higher non-stop. Short sellers are having nightmares because the market unexpectedly went higher against all odds.***

Commodities are struggling at this stage, except for grains which just bounced back from lows as expected. Energy. Metals and softs are hanging around at the same levels. Commodity stocks are also suffering and we are not expecting any great news at this stage for commodities because our astro indicators are not indicating any supportive sign.

This is what we mentioned on the 26th of October: ***Wednesday short term traders should book profit but one should buy back on lower side as if S&P holds 1918 level. On Monday we mentioned that S&P would rock if it trade two days above 1918 which may take S&P toward 2000 level.***

Late Wednesday evening we see some profit booking coming back.

This is what we mentioned on the 12th of October: ***Those who like to trade for longer period can buy market aggressively from 16 October. We still believe that S&P may close around 2130 by end of this year which means that strong rally can take place in market.***

This is what we mentioned on the 20th of August: ***Soft and grains remained mix, but metals and energy lost value. Era of 1995 to 2000 is back now*** because equity and USD is showing positivity and commodities are struggling.

Hold positions in stocks, avoid commodities, sell bond and one can start buying USD on weakness. Indexes should be in your buying list. Watch our predicted ranges closely, once again 1988 will be crucial level for S&P, 1282 for gold and USD 81.00.

From our book: *From here to 15 August markets will trade mix, but surely many stocks will move higher. We will be releasing more five stocks in retirement account in today's stock report. In this year book "2014 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2014", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity.*

This is what we mentioned on the 18th of May (two days before the market started rebounding, as we predicted a huge rally starting from the 21st of May in all major indexes): In short, time is running out for most analysts who have been predicting a fall or crash. Investors will miss the opportunity of buying; in fact, they will go in the red if they short stocks and indexes, so we warn these analysts to advise investors carefully. We see a huge move coming from the 21st of May and S&P will achieve 1955 from the current levels of 1870.

In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
