## Friday's Flash news (unedited copy)

**Dear Members, this was Wednesdays flashnews headline: Astro indicators are not showing any negativity but market is selling off, but if market rebound then they will go crazily higher due to fake selling of Monday and Tuesday**

Dear Members,

We received great notes from readers of "2015 Financial Predictions", I hope that predictions in this book will change many people's life if markets behave like what we mentioned in book.

**Small favor I need** – If you have read book and liked it then please putout word for this book so it goes in many people's hand. Many of you will think that I want to make money by selling this book, that is 1% truth but our moto is to get recognitions to this subject of astrology and wave of nature. I could have kept \$5.00 or \$1500 price for this book and I am very much aware that our loyal members still would have bought is at \$1500. I always keep a fair value, and I thought \$159 is great value for my hard of three months of writing this book.

On Thursday stock prices traded very positive as predicted. Commodities traded mix to negative. Currencies remained very volatile to weaker but emerging market currencies traded positive, especially Indian Rupee. Thirty year bond went sharply lower as predicted.

Many members were very excited with our call, we normally don't putout their emails but one of our daily flashnews member sent note:

Hi Mahendra Ji,

I think so far nobody (including so called Market experts) has dared to predict the market trend in uncertain times. They all take a general U turn with the sell offs and start predicting sell on rise.

**Your work is amazing and really applaudable.**

Best Regards  
Rajesh Khandelwal

Sent from my iPhone

We are aware that how much people trust on our small notes when we strongly recommend either buying or selling and this is purely because of astro cycles, I am zero without astro cycle indicators.

On Friday employment report and surely everyone is expecting major volatility but we see more calmness in market after having two major positive days.

Avoid any buying in commodities, hold positions in USD and Indian Rupee. Hold selling positions in Thirty year bond.

S&P closed above 2045 which clearly indicates that it is moving toward 2088. Watch small astro resistance at 2066 and astro support point 2045.

This is what we mentioned yesterday: *It looks like the positive momentum in the market will continue as the astro cycles are showing positive indications, so hold your positions in stocks and indexes. Our astro support level of 1982 will remain the most important support level in the coming time and on the higher side the market will have a small astro resistance at 2045; and the major resistance still remains at 2088. Investors may start celebrating if S&P closes above 2088 for two days, because after this happens, the market won't look back.*

*Important Note: If anyone would like to join our affiliation program then they can do so by clicking the link below.*

**Buy:** <http://www.mahendraprophecy.com/2015-financial-predictions-ebook.php>

This is what we mentioned for Wednesday: *On Tuesday most of global market lost big value but still weaker trend is not convincing as it is not matching with Astro cycles so we still believe that market will rebound sharply. Thursday and Friday is very positive astro day for all major markets so watch closely Wednesday, hold positions in market. Mars changing house and Mon will be in Sun house from Thursday so we are still expecting huge turn around for markets.*

*Metals and other commodities traded positive but energy prices went down once again. Oil prices is creating some damage to market but we see oil stabilizing soon around \$47.50.*

***We strongly recommend staying away from any leverage trade for the 24 hours and one can start taking aggressive positions in markets on late Wednesday or Thursday.***

*Currencies traded both sides and same kind of trend will continue but still USD will have upper hand. Thirty year bond is moving very volatile, this final move it is taking and I don't know how many hours or day it can hold these prices because it is getting ready for major fall like Yen and Euro so trade carefully.*

*Gold traded positive as predicted and still it can hold value during this week. \$1225 will be crucial for Gold and won't able to break \$1247.*

*Once again S&P testing last month lows of 1982, and it will hold value, what we expected huge upside move during this week for S&P which may not happen but still we are hope that S&P move go back to 2033 or higher by Friday.*

**Here are the trading ranges and strategies for Friday:**

## **METALS**

On Thursday, precious and base metals traded mix, we strongly recommend trading in and out in metals without any positions. At this stage its very difficult for gold to cross 1225 level as mentioned and down side \$1193 support level.

Gold shouldn't close below \$1193 and \$1182 otherwise it can have free fall. It is trade above \$1225 then chances that it may move toward \$1247 but looks very difficult.

In this week newsletter we mentioned gold to trade positive and so far it traded as predicted. Aggressive trade can be only taken after breaching either levels.

This is what we mentioned yesterday: Wednesday precious metals lost value and base metals traded mixed. If tomorrow and Friday precious metals go down or close in red, it will confirm that weakness will continue in precious metals. We are still not recommending any buying positions in precious metals. One should also avoid any buying in Base metals as well as metals stocks. \$1225 will remain an important astro resistance for gold and it looks like gold will struggle to move above this price.

I would like to put a small part this week predictions from our newsletter: *Last week metals traded negatively due to a stronger dollar and traders wanted to remain away until positive sentiments returned because metal investors have lost big money in the last two years. Our advice is to have patience because better time will come to invest so there is no need to run after trades.*

*This week's astro cycle is very important so gold, silver and base metals should act positively from Tuesday and this positive trend to continue till Friday. If precious and base metals trade negatively from Tuesday to Friday then we will be the first to start getting worried for metals and metal investors.*

*Sometimes a few days with important astro combinations can reveal the real picture of oncoming time cycle. This week's trend can will decide future trend of gold because either metals moves towards new lows in the month of January or January can push metals above \$1200.*

*In short, this week's trend will be enough to guide you so watch gold, silver and base metals trend closely. If they start trading negatively from Tuesday then surely a big fall is on the way.*

This is what we mentioned on 1 September: **Gold breached \$1283 level which clearly indicating that is moving toward \$1248 to \$1153 and silver \$17.57 to 14.87 level soon. Metal stocks will also suffer setback.**

Here is Friday's range: **(March 2015 contract):**

**GOLD: \$1218.80 to \$1195 Feb 2015**

**SILVER: \$16.79 TO 16.31**

**COPPER: \$279.10 TO \$274.10**

**PALLADIUM: \$796.00 TO \$783.00**

**PLATINUM: \$1228.30 TO \$1214.00 April 2015**

## INDEXES

On Thursday stock market moved up sharply higher and short sellers start running to cover short. This week we mentioned that short sellers will run for their life because we saw market moving very aggressively higher. Last two days have been fantastic for buyers.

On Friday market will trade very calmly without much volatility and chances is clear that market may close once again on higher note. We strongly recommend holding positions in markets, don't short any market at this stage, our favorite markets are USA and European.

2045 was easily taken away by strong move so now 2066 and 2088 ware levels to watch. It will be most exciting day if S&P closes above 2088.

Book some profit in DRN but don't short. Hold positions in YINN and FAS.

This is what we mentioned yesterday: *Globally stock prices moved sharply higher as expected. We have constantly been mentioning that this will be the most interesting bull market so traders should take advantage of buying on any weakness. Tech, biotech and financials performed very well. Housing stocks also moved sharply higher and they are our second favorite in 2015. We do not see S&P dropping below 2005, so hold positions in the markets and one can add more as earning season starting from next week and we see a great earning season for most corporates.*

*Buy more in European and USA. YINN and INDL moved sharply higher so hold positions in both these ETF's.*

This is what we mentioned on late Tuesday: *On Tuesday market lost big value but we see are still seeing positive trend will continue in market as this volatility or fall in market will be proven fake so stay invested in market. Buy European, Asian and USA market on weakness or lower side.*

*S&P will bounced back from and all other USA indexes will bounce back. We don't see S&P falling below 1982 which is great level to buy, even in last month same thing happened also this level was proven great.*

*Wednesday onward market will move higher so buy tech stocks, Apple is great buy and other retailers are also great buy. Banking and energy stocks will also rebound.*

*TMV or TBT are great buy.*

This is what we mentioned 12 December: ***S&P broke the most important level of 2014 after breaking \$2033 and now 1988 and 1982 will be great buying opportunities as our astro indicators are not showing any weakness below 1982 so one can start buying on any weakness in stocks and indexes on Monday.***

***Oil's negative trend should start playing the biggest role for the market consumer and corporates of America, India, Japan and China, and this will be key reason to push S&P toward 3200.***

Here are Fridays' ranges: (March **contracts**)

**HONG KONG (cash) – 24220 to 23880**

**NIKKEI – 17598 TO 17300**

**NIFTY S&P (Spot) – 8269 to 8220**

**CAC – 4302 TO 4230**

**DAX – 9910 TO 9789**

**DEX EURO STOXX – 3157 – 3101**

**FTSE – 6553 TO 6488**

**FTSE/JSE (Cash) – 43950 to 43578**

**S&P – 2066.00 TO 2045.50**

**NASDAQ – 4279.50 TO 4206.25**

**RUSSELL – 1201.90 TO 1183.00**

**DOW – 17988 TO 17770**

### **TREASURY BOND**

We are not changing anything that we mentioned yesterday: Thirty year bond traded negative on Thursday, still volatile trend is pending but overall negative trend started so don't miss selling opportunity. Current astro cycle is warning very strongly on Thirty year bond move because it is making all attempt to through traders out from market and this always happen in final phase of bull cycle before crash starts.

We strongly recommend hold put option in bond and call in TMV.

This is what we mentioned on Monday: *Avoid any new trading for a few days but medium and longer term traders can hold shorts in it, or add more TMV. Last week we mentioned a bearish trend to start from 6 January 2015, which is 24 hours away.*

***Hold positions in TBT, TMV and put options in June 2015 futures contract.***

***145 and 148 are great ranges to add put options in Thirty year and buy in TMV around \$30 levels. June's contract is trading around 160, so take selling positions in June contracts.***

***We are changing our upper side target of 148 in March contract, so one can add more put options.***

Friday trading range (March 2015 contract):

**TREASURY BOND – 148-07 TO 146-05**

### SOFT COMMODITIES

On Wednesday soft commodities traded mixed and on Friday they will trade mixed, but keep adding positions in cotton and avoid the rest of the soft commodities.

This is what we mentioned yesterday: On Tuesday softs traded positive, sugar prices went higher more than 4%, coffee also moved higher but rest of softs remained in negative trend.

On Wednesday we see positive opening but we recommend selling or booking profit in coffee and sugar. Add some more position in cotton.

Buy coffee around \$157 level and cotton around \$59.00. We don't see coffee going below \$155 and cotton below \$58.10.

Hold selling in cocoa, lumber, orange juice, and sugar.

Friday trading range: (March 2015 Contract)

**COFFEE: \$181.00 TO \$175.30**

**COTTON: \$60.98 TO \$60.15**

**SUGAR: \$15.15 TO \$14.68**

### GRAINS

On Thursday grain prices traded mixed to weaker as predicted and the same kind of trend will continue on Friday so selling is recommended on the higher side.

This is what we mentioned yesterday: On Tuesday grains prices gained, but from mid-Wednesday or Thursday grain prices will move down again so stay away from any buying or if you have bought some positions then must get out around higher side mentioned below ranges.

Weakness in Wheat and soy to remain here for the few weeks. Soy oil and corn will remain in positive directions.

This is what we mentioned four months back: *Don't buy any position at this stage but wait for the next week's newsletter for the right advice. Selling calls in soy around \$1550, wheat at \$730 have done very well and we targeted Soy to fall below \$1000 and wheat \$550. Both these lower side targets are closer to being fulfilled. Selling grains remained the best advice in 2014, yes gold and silver selling has also done well.*

This is what we mentioned two month back: *Avoid Soy products. We don't see soy going below \$930, wheat \$477 and corn \$330 so go aggressive if prices come to these levels.*

Friday's trading range **(March 2015 contracts):**

**CORN: \$399.00 TO \$390.00**

**WHEAT: \$572.50 TO \$562.00**

**SOY: \$1055.50 TO \$1030.50**

**SOY MEAL: \$350.00 TO \$343.10**

**SOY OIL: \$34.20 TO \$33.55**

## **ENERGY**

Oil prices traded mix on Thursday. Positive trend stocks supported energy stocks but still oil and other energy products were struggling. On Friday we recommend trading in and out in energy. Still we are not recommending any aggressive buying in oil but surely as predicted on Tuesday that oil would hold \$47 level which so far did well.

This is what we mentioned yesterday: Our yesterday's call of buying oil around \$47 did well and we still recommend covering shorts in oil around \$47. Avoid heating oil and RB gas for a few days but natural gas still looks like a good trade. On Thursday trading in and out will remain the best strategy in oil.

This is what we mentioned yesterday: From Wednesday oil may start recovering from lows so are not changing any outlook of buying around lower side mentioned ranges. Same time one can buy heating oil, RB gas and Heating oil. Don't take any leverage trade as still oil has to spend some time before it recover.

Energy stocks traded bit weaker and we are sure you must be watching ERX closely as it came down to \$51.50, we recommend buying around \$49.

This is what we mentioned yesterday: *ERX fell 12% to 54.00, around \$49.00 should be good buy but buy with stop-loss. Last month we recommended buying ERX around \$49 and it worked well because it moved to \$64.00. Around \$65.00 we recommended selling ERX so one can cut positions now.*

*Watch ERX trend closely, but don't miss buying opportunity in GAS.*

This is what we mentioned on last week Wednesday: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned 11 December: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get*

*out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

*Energy stocks are crashing, heating and RB gas falling sharply with oil. We still recommend to stay away from energy at this stage, trading in and out will be right strategy, specially selling at higher levels.*

This is what we mentioned last Monday (5 December): ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gas gained value from the lower levels on Friday as predicted.***

***On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.***

Friday's trading range **(February 2015 contracts):**

**OIL: \$50.25 to \$47.97**

**NATURAL GAS: \$3.07 to \$2.88**

**HEATING OIL: \$1.7300 TO \$1.6780**

**RB GAS: \$1.3605 TO \$1.3200**

## **CURRENCIES**

US Dollar gained value against Euro, Pound and Franc. Who thought middle of last year that USD index will hit 92.00 and Euro could fall below 1.2000 levels. Selling Yen, Euro and Franc remained best call.

On Friday currencies will trade both sides, on higher side medium term traders can get out from all positions. Longer term selling of Euro can cover 50% positions.

Emerging market currencies traded as predicted, Rupee buying recommendations have performed very well during this week as Rupee gained 1.5% from low. Keep adding Rupee.

Wait for our weekly newsletter. Here what we mentioned yesterday: ***Dollar still remained in a positive trend against Euro, Swiss Franc and British Pound. Dollar index hit a ten year high. Emerging market currencies traded positively and Rupee gained against frontline currencies as well as emerging market currencies. Rupee is a great buy against most currencies so one take a trade or buyers can hold positions.***

***On Thursday dollar and most currencies will trade mixed so trading in and out will be the best strategy for Thursday.***

This is what we mentioned on last Monday (5 December): *Friday dollar gained handsome value, Euro, Yen and Franc made more lows and Dollar made a high. We recommend trading in and out in currencies on Monday, book 85 to 90% profit in USD, EURO, FRANC and YEN. Our view for the medium and longer term is still very negative for euro and Franc compared to other currencies so we won't recommend any net buying in Euro or Franc.*

*Emerging market currencies traded as predicted and will trade positively on Monday. We still believe that Euro may touch 1.1880 level before the end of this year. Another two major trading weeks are pending before everyone starts their holiday mood and we recommend going flat positions after 20 December to 3 January.*

*On Monday all major currencies will move on both sides.*

This is we mentioned on 2 October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember this what we mentioned in the months of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

**This is what we mentioned in the month of May 2014: Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.**

**Friday's trading range: (March 2015 future contract)**

**DOLLAR INDEX – 92.95 to 92.21**

**AUSTRALIAN DOLLAR – 0.8138 to 0.8048**

**CANADIAN DOLLAR – 0.8486 to 0.8414**

**BRITISH POUND – 1.5120 to 1.4998**

**EURO – 1.1879 to 1.1741**

**JAPANESE YEN – 0.8393 to 0.8312**

**SWISS FRANC – 0.9850 to 0.9760**

**RUPPEE – 62.98 to 62.40 (Spot)**

**RAND – 11.63 to 11.44 (Spot)**

**Below few important notes from last two months Flashnews:**

This is what we mentioned on 14 December: ***We are not changing our outlook on market because still all astro indications are positive, so I would like to wait for more 48 hours before we give clear indications. We still believe that S&P won't close below 1982 for three days in row, and if it does then surely that will be most negative news but happening of this is 1% chances.***

Members must remember that S&P is just a few percentage points away from an all-time high. 30 October: ***S&P is back to a few percent away from an all-time high and everyone is wondering whether it will break this new high and move towards 2130. We are aware that most of our members are still trusting and hoping that our target may get achieved by the end of this year. The market tuned around the previous week on Tuesday from 1813 and it has been moving higher non-stop. Short sellers are having nightmares because the market unexpectedly went higher against all odds.***

***Commodities are struggling at this stage, except for grains which just bounced back from lows as expected. Energy. Metals and softs are hanging around at the same levels. Commodity stocks are also suffering and we are not expecting any great news at this stage for commodities because our astro indicators are not indicating any supportive sign.***

This is what we mentioned on 26 October: ***Wednesday short term traders should book profit but one should buy back on lower side as if S&P holds 1918 level. On Monday we mentioned that S&P would rock if it trade two days above 1918 which may take S&P toward 2000 level.***

***Late Wednesday evening we see some profit booking coming back.***

This is what we mentioned on 12 October: ***Those who like to trade for longer period can buy market aggressively from 16 October. We still believe that S&P may close around 2130 by end of this year which means that strong rally can take place in market.***

This is what we mentioned on 20 August: ***Soft and grains remained mix, but metals and energy lost value. Era of 1995 to 2000 is back now*** because equity and USD is showing positivity and commodities are struggling.

***Hold positions in stocks, avoid commodities, sell bond and one can start buying USD on weakness. Indexes should be in your buying list. Watch our predicted ranges closely, once again 1988 will be crucial level for S&P, 1282 for gold and USD 81.00.***

***From our book:*** *From here to 15 August markets will trade mix, but surely many stocks will move higher. We will be releasing more five stocks in retirement account in today's stock report. In this year book "2014 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2014", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity.*

This is what we mentioned on the 18th of May (two days before the market started rebounding, as we predicted a huge rally starting from the 21st of May in all major indexes): In short, time is running out for most analysts who have been predicting a fall or crash. Investors will miss the opportunity of buying; in fact, they will go in the red if they short stocks and indexes, so we warn these analysts to advise investors carefully. We see a huge move coming from the 21st of May and S&P will achieve 1955 from the current levels of 1870.

In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

Thanks & God Bless, Mahendra Sharma,

8 January 2015, Thursday 3.00 PM, Santa Barbara
