26 September 2013

Newsletter Heading for the Week

Dear Members,

In the last two years many stocks went through the roof in USA market due to supportive Fed policy and positive attitude from corporate and it seems like people are chasing stocks because no one wants to miss this solid bull market. After reading a few emails it looks like large investors community missed this rally or they were not enough invested and now they are wondering whether it is safe to enter the markets at this stage. After reading their emails, to me it has become clear that people are desperate now as they missed the most unique stock rally of 2012/2013.

In the year 1996 when we came out with the stock bubble predictions, it was very clear that tech, internet and telecommunication stocks would fly and it happened. That period was very easy for us on part of predicting and investing because we were just focusing on NASDAQ and tech stocks and we kept recommending our close friends and clients to keep accumulating tech and telecom stocks. The current bullish trend of stocks is different from 1996 because many sectors are going up together, and it is a broad based rally.

It is always easy to trade or invest when you know that one sector will move up, like in 2001 when we recommended buying metals stocks we knew that these mining stocks would be on fire for the next seven years and they did. Many people made fortunes investing in tech stocks during 1996/1999 and metals stocks during 2001/2007.

Now since the third quarter of 2011 we came out with another stock bubble prediction but this time it is not easy like NASDAQ or HUI stocks, this time was a different era that is why we recommended all different kinds of stocks from financial, housing, tech, food and biotech etc. Now since the two years I have been doing some research and finally I am ready to come up with a clear strategy on stock investment strategy. I made more than \$1.5 million holding tech stocks worth of \$17000 in the three years from 1997 to 1999, and we see a bigger bubble this time so it is important to know that where we should invest and how we shall make money during this stock bubble of 2012 to 2015.

Here is the first months report.

As this is my first stock report "Stock investment report", lets plan strategy of stock investment.

Brief about this bullish cycle "2011 to 2015"

Most of you are aware that astro indicators turned very bullish from 2011 September and we released buying predictions for stocks and Indexes at the same time. We still remember the day when S&P came down to 1089 and we send out an alert stating "This is a life time opportunity to buy as we won't see S&P going to 1089 again", and at the same time we predicted S&P going towards 3200. We also predicted the target price for each year and how S&P would move, for 2012 December we predicted S&P would reach 1400; in 2013 S&P would reach 1750; 2014, 2300 to 2500 and finally S&P topping out around 3200. Since then the journey has been interesting. S&P moved up from 1089 to 1732 and during last two years most of target have been getting achieved. Many of the stocks that we recommended by reading their astro chart moved up nicely from 100% to 500% in many folds and this encouraged us to start this service.

We were pretty sure that this bullish equity trend will be broad based rather than one specific sector or industry moving up. Normally Investors lives become very easy if any one sector moves up in the market, which means money is following there and everyone wants to have a part in that sector or industry. In these kinds of bullish trend it is very easy to make money like Tech (1996-1999) and metal era (2002-2007). **I made money in 1996-1999 not because I was very smart investor or trader, I made money because I found the right sector to put money in and I held that investment for a few years and I became a millionaire.** In Mid 2011 we knew that during this bullish cycle recommendations in stocks will be difficult because overall only sound fundamental stocks will perform. Also CEO's or those who have been managing their companies well those stocks will go through the roof and many new stocks will come on top or they will become the talk of the town (lately **TESLA, Netflix and Facebook or Priceline**).

In Short, **USA brand names are coming back**, look at **Starbucks, Tesla, Visa, Master Card, Facebook, Amex** etc. It will be a difficult time for international money managers because USA stocks will be outperforming compared to world. Yes, we have one master key here "USA stock will run like crazy so the money flow will be here in USA and rest of world will be looking helpless". Since the last two years we have been predicting **"THIS IS THE ERA OF USA AND MADE IN USA IS COMING BACK"**, watch this predictions closely as in the last 30 years of my predicting career astro indicators guided us well about

90% time. I am also human and errors are bound to happen but most of time when we got strong signal from **wave of nature/astro cycle then chances for coming wrong become minimum.**

Let's see what current astro time cycle says and planning:

1. Saturn with North node will depress many big old brand names and will bring new comers to the front line and will also put these company in the success story list. Once again we would like to remind you that this cycle will support risk takers. From 2009 this unique cycle started under Saturn period and North node joined in 2011. We have seen that many big name companies are lagging behind including Microsoft, Kodak, Toyota, GM, Nokia etc. Must listens to our interview with Jack Bouroudjian 26 Feb 2009, it is on our website home page.
2. During 2011 to 2015, overall market will perform very positive but **housing, mortgage, bio-tech and innovative and new technologies will do amazingly well compared to old ones.** Also finance, energy efficiency, breweries, food and food related stocks will do well.
3. You have to avoid mining and commodity related stocks as these stocks won't be able to perform well. Investing money in these stock will like blocking your money which is not providing any returns. In fact investor of mining stocks will keep losing money.
4. **Give more allocation to longer term**, try to avoiding short term trading in stocks if you like to take complete advantage of the running equity bull market which may last until 2015.
5. If you have parked big money in treasury or bank deposit then you should diversify and buy good stocks.
6. **Any weakness or fall between five to seven percent** in market should be taken as an opportunity in stocks.
7. You can trade or invest in Index, etf's, call options and stocks.
8. You should be avoiding or shorting any stocks which are rising due to new products or innovative, we believe that current astro cycle will support those who take risks and move ahead without fear as these companies will bring change into the whole industry like Apple and Tesla did. Don't go against the wave of nature/astro cycle; as buyers will keep making money and short sellers or those who will be waiting will remain sideways without taking advantage of the most unique bullish trend in equities. **Two years ago we mentioned that risk takers, and buyer in this market will make money, especially in USA market because this is era of USA equity market.**

Let's see how our recommended stocks performed in the last two years and how they look in the coming time:

TESLA: Electric car market remained the top performer in our recommended list, stocks have done amazingly well and we know it will outperform in the coming time. Our target on this stock is \$280. It is currently trading around \$180. We strongly recommended in 2012 around \$30, and we kept recommending adding more every month.

VISA: Visa credit card company have done very well. In the coming time this company will do well. It is currently sitting at an all-time high, our target is \$500 in the next two years. Currently the price is at \$193 and we recommended buying it at \$83 in 2011. We kept recommending adding more every month.

MASTER CARD: This is also a credit card company. It has done very well and will keep doing well in the coming time. Our target for two years is \$1500. Currently it is trading around \$680. We recommended buying it in in 2011 at around \$235. We kept recommending adding more every month.

AMEX: American express credit card company, has also done well. We are still recommending holding this stock. Our target is \$250 in the next two years. It is currently trading around \$75. We recommended buying it in 2012 at around \$45.

PRICELINE: Online travel booking company. This was one of our great picks in late 2011, and its stocks moved up crazily. In mid-2011 we recommended buying around \$439 and now it is trading around \$1001. Our next target is \$1200. Our members should book profit on any rise and we will write in detail about the trading strategy for Priceline here below in this month's letter.

STARBUCKS: This stock has also done very well since we recommended buying it. We recommended this stock around \$33 and it is currently trading at \$75. Our target is \$180 to \$250. We will write in detail below.

WHOLE FOOD: This stock has also done well, we recommended it around \$28 and it is currently trading around \$56. The astro chart is very positive for this company. Our target is \$90.

COSTCO: In the last quarter of 2011 we recommended around

\$84.0 and currently it is trading around \$115. This company has great astro chart and we clearly see Costco to perform very well for the next 7 years. Our target is \$190 in the next two years.

FMCC & FNMA: Both these housing stocks have done amazingly well. We kept recommending acquiring

positions in this stock around \$0.23, and currently these stocks are trading around \$1.29. They went to our predicted target \$5.00. We see a housing boom and mortgage companies to doing well.

YHOO: Yahoo Inc. moved up around 100% from where we recommended. Currently we see a mixed trend for Yahoo so those who bought yahoo can book half profit at this stage. The next two years look far better for this company but we strongly believe that Yahoo will be bought by any other group by mid next year when Jupiter enters in Cancer.

Read all new recommendations of stock report below here of this month's letter, also we will send update every few days to our "stock investment report".

Important note: We will send a detailed letter monthly on our top picks, and with new picks. We will also send a few updates every week on stocks and any new pick so watch our stock

reports closely as well as market trend because it stocks perform well of market is in positive directions.

Here stock Investment Monthly letter from 1-30 October 2013:

Current offer price for one month - \$199,	and new price will be \$500, save \$210
Current offer price for one month - \$550,	and new price will be \$1410, save \$860
Current offer price for one month - \$970,	and new price will be \$2590, save \$1620
Current offer price for one month - \$1790	and new price will be \$4750, save \$2960

Click her to subscribe or extend it: <http://www.mahendraprophecy.com/stock-investment-report.php>

Important note: **Advisors and fund manager always like to talk on both sides and they communicate with if's and but's. In the last twenty five years we never used if or but in any of our predictions. Whenever we see any new trend developing we recommend them openly without any fear and this is the reason our work on the financial market has been becoming very popular, especially from 2001. We see a bullish trend in the market so stick with it and many will make fortunes. A new millionaire and billionaire list will rise in multifold in USA in the coming two years.**

We will keep sending updates with new stocks if we like any during our daily research. We will watch closely our recommendations and guide you if there is any profit booking recommendations or stop-loss advise.

We wish you good luck with this service. Please update us about how your performance.

Thanks & God Bless,
Mahendra Sharma

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
