Monday Daily Flash news (Unedited report)

Markets acted mix, but metals and some commodities are gaining value

Dear Members,

On Thursday USA market traded lower in Asian and European markets but in USA trading sessions it bounced back. In the last hour trading sessions it gave away some gains so it was volatile sessions. People are concerned about China's Coronavirus number but still market is acting well which is good sign for investors.

Metals gained value, coffee moved sharply higher but sugar and cotton came down. Grains remained in the mix directions.

Currencies lost some value against USD and energy prices traded mix.

Sun changed house which created some uncertainty but Sun will settle down in the few trading sessions and we shall get real picture.

Short negative astro combinations are losing battle against medium term positive astro cycle which is great news for buyer, but I would like to see few more trading sessions before jump to conclusion.

Biotech and techs are performing very well, Financial also today acted very strong which means that they will come forward to move this market higher.

I will request your to read once again what we mentioned on Monday: *This morning, Saturday the 8th of February Mars changed its house. This is the most*

important astro event as Mars is a short-term planet that changes its house every 45 day. Mars also represents aggressiveness, bull market, blood, war, diseases, biotechnology, metals, and technology.

Mars moved in the zodiac house of Sagittarius where Jupiter and the South Node are situated. Mas is a friend of Jupiter and the house of Sagittarius is owned or ruled by Jupiter, which means that Jupiter will get some extra aggressive power.

Extra aggressive power means that either the bull or bear may become very aggressive in the fight to win the fight on either the bullish or bearish side. My reading of this astro combination is indicating that the bull may win, but I would like to see the next few days trend before confirming 100%. If the bull wins this fight, then the market may move in one direction aggressively; and if the bear gets supported by Mars then the market could turn bearish. Read our weekly newsletter very carefully.

I believe **“2020 financial Prophecies”** book will be great gift from you if anyone is trading or investing in market and you want to surprise him/her with our theory. No theory exist which can guide you one year in advance what would happen in each month.

This is what we stated: In our book I predicted that China will have worst time cycle from 2023 so plan your strategy accordingly.

Watch the important support & resistance levels for this week (10th – 14th of February 2020):

- Gold trading above \$1588 for the three days may push toward \$1663 but at this stage is struggling to close above this level so watch closely. Lower

side. If gold goes to \$1663 then silver will test \$20.23 and Platinum \$1059/988. On lower side \$1551 and \$1541 are key astro support for gold.

- New Palladium's new astro resistance will be at \$2429 and lower side first support at \$1774 and major support at \$1745; Copper will struggle to close above \$263, and lower side \$251 level is major support level.
- S&P's now first astro resistance will be at 3398 and first support at 3338 and 3287.
- Oil now astro resistance level will be \$53.88, and downside astro support will be at \$47.71. Closing below \$51.18 will open the door for \$47.71.
- Gas's new level will be from \$1.81 to \$2.08; close above these levels will give birth to new directions trend.
- Bond achieved 165-00, on lower sides 157-00 is possible.
- Dollar Index closing above 98.18 levels have opened the door for it to test 99.11 level. Pound, euro and Franc are in negative trend.
- Stay long emerging market currencies, sell Dollar once again against Rand 15.35, Peso at around 19.69, Rupee at 72.37, and Real at \$4.28.
- Orange Juice held a strong astro support level at \$95.65, next important astro resistance will be \$137.35, Sugar's \$11.37 support and \$14.68 is astro resistance level. Cotton has support at \$63.08 and \$72.75 strong resistance level, cocoa support level \$2125 and selling \$2798. Coffee support at \$98.75 and \$119.00 first astro resistance.
- Wheat \$501, corn at \$368 and Soy \$863 will be great buy. Higher side book profit in wheat at \$575, corn \$423 and soy at \$975.

Here are the trading strategies and ranges for Friday:

GOLD/SILVER/BASE METALS

On Thursday precious metals and base metals moved higher which indicating that metals to act positive.

On Thursday we recommended short positions in base metals and we are still holding that predictions.

On Friday mix kind of trend will continue, trade in and out in precious metals until gold remains below \$1588 level. Since last many months gold has been struggling to close above \$1588 level. Silver and platinum will follow gold. On lower side Gold will still hold \$1551 level which is great news for buying.

Friday sell positions in copper, palladium, zinc, nickel and aluminum.

Palladium small astro support will be at \$2051/1971 and higher side 2368 will be great sell.

Friday astro combination recommendation – On Friday we see mix trend in precious metals but sell base metals on higher side.

Friday's trading range: **(March 2020 future contract):**

GOLD: \$1586.00 to \$1570.00 April (Spot ranges \$1582.00 to \$1567.00)

PLATINUM: \$981.00 TO \$965.00 April 20

INDEXES

On Thursday globally markets traded negative but USA market recovered and close barely lower in the last trading hours so it was nice recovery from lower levels.

On Friday we see markets holding value, I won't surprise if USA Indexes close at all time high so don't short market on Friday. Monday will be holiday in USA so long

weekend. Tuesday traders will be back with actions and actions may be positive, but you don't want to take three days risk of holiday.

Short term trader trade in and out in market. Still **SOXL** traded positive and **LABU** lost some value. DXCM announce earning as expected, stock moved higher in normal trading hours and moving higher after market close.

As I mentioned that medium term positive astro combinations are taking over short term uncertain astro combinations which means that market will be buy on weakness if next three days trades stable to positive then I can predicted next target for S&P 3498 in few weeks' time.

Let me not get over excited as I would like to get first some confirmations in the next three days before you push you to add more aggressive positions.

Your focus shall be on biotech at this stage, surely tech will do well but those which are not that connected to China.

All these stocks are in our buying list since 2011 and we constantly recommended adding on weakness in 2019, still they are great bet: TSLA, NFLX, AMZN, Google, MSFT, Apple, and REGN.

Friday's astro combination recommendation: On Friday we are expecting buying coming back but some profit booking will also come around higher so day trader can take advantage of swing.

ENERGY

On Thursday oil prices gained some value but still it is struggling to move higher. On Friday we shall expect both side move and prices may hold value due to positive astro day.

Gas will also act positive. Higher side selling is recommended and watch \$53.75 level is important astro resistance level

due to mix astro combinations so selling is recommended on higher side.

Gas gained value but I won't get very excited until it doesn't get close above \$1.92 level for the three trading sessions. Thursday trade in and out.

This is what we stated over the last four years: So far, short-term trading has provided great returns in the last 18 months after my selling recommendation at \$97.00 mid-2014. You must remember at we mentioned two weeks ago. In 2001, we recommended buying oil at \$16.78 with a target of \$100 and higher. In August 2008, we recommended selling at \$145 with the target of \$32.00. Once again in 2014 we recommended selling oil at \$100 with target of \$27.71. I couldn't ask more from nature.

Friday astro combination recommendations for oil – Trade in and out in oil and gas.

Friday's trading range (March 2020 contracts):

OIL: \$52.12 to \$50.39

NATURAL GAS: \$1.87 to \$1.79

RB GAS: \$1.6080 TO \$1.5510

HEATING OIL: \$1.6997 TO 1.6531

CURRENCIES

On Thursday Euro made low once again. Pound and Yen gained value but their rise will be proven short life.

Most of other side currencies remained in the mix directions. Emerging market currencies lost value.

On Friday we are expecting mix trend in market so stay sideline or just trade in and out without taking any aggressive positions on either sides. Brazilian Real tested all time low on China issue but then bounce back after Bank Policy. It is most favorite currency of 2020 so take buying opportunity from next week Wednesday.

Trade in and out in Franc, Australian dollar, Canadian dollar, New Zealand dollar. Higher Pound and Yen on higher sides.

99.11 level is most crucial astro resistance for USD so watch it closely.

Friday astro combination recommendation – Sell most of currencies on higher sides.

Friday's trading range: (March 2020 future Contract)

DOLLAR INDEX – 99.11 to 98.71

AUSTRALIAN DOLLAR – 0.6757 to 0.6697 (Spot 0.6748 to 0.6589)

TREASURY BOND

Bond prices traded mix, Friday and next week is negative for bond so take sell positions in Bond on Friday with target of 159 by next Thursday.

Selling at 164-00 was the best one and cover at 159-00.

In 2018 January, we stated: *We started recommending selling in Bond at 172-00 with the most important support level at 137-00, which was achieved.*

Fridays astro combination recommendation – Sell Bond on Friday.

Friday's trading range (March 2020 contract):

TREASURY BOND – 162-15 TO 161-19

SOFT COMMODITIES/

On Thursday coffee gained more 3%, \$98.75 level was held very strongly which confirmed that bottom has been formed in Coffee.

Cotton and sugar lost value. Sugar achieved top of \$15.78 level and crashed by 4%. We are sure you must have gotten out from Sugar. Stay short in cotton as it will move toward \$62.75 level. Cocoa will trade mix.

Cotton will struggle to stay short in cotton. Coffee is heading toward \$107.88 level in the next ten days and then \$117.81 level.

Lumber and orange Juice gained some value but avoid both these commodities.

Four months ago, we stated: A lifetime buying opportunity is coming in coffee at \$93.75, cotton at \$57.75, sugar at \$10.88.

Friday astro combination recommendations – Buy coffee, stay short in cotton.

Friday's trading range: **(March 2020 Contract)**

COFFEE: \$106.05 TO \$101.95

COTTON: 68.10 TO 67.19

COCOA: 3020 TO 2942

SUGAR: \$15.45 TO \$14.81

GRAINS

On Thursday soy gained value, but wheat and corn lost some value.

Grains have formed bottom so keep accumulating on lower sides. Next week on Wednesday and Thursday get ready to take some serious aggressive long positions in soy and corn as they can move 10% higher by end

of March so great time to make money.

Wheat will be good buy around \$505 level.

Corn is still our favorite. Six weeks ago we stated: Wheat is great buy now around \$505; Soy will be great buy between \$888 to \$868 level, corn will be great buy around \$368 level if they come to these levels.

Friday astro combination recommendations –Trade in and out or deep pocket then start buying soy and corn.

Friday's trading range **(March future 2020 contracts):**

CORN: \$383.00 TO \$376.00

WHEAT: \$548.00 TO \$537.00

From stock market sections:

INDEXES:

Remember this Feb 2018 statement – Now I will be watching 2550 level; if S&P closes below this level for the three days, then disaster will take place for stocks and S&P may test 2451. I may recommend closing long in stocks but lets see whether S&P will not close below 2550 or it bounce back from this level. I am not worried after April but let's focus on April at this stage. If everything goes smooth, then we may see S&P testing 2900 every soon in 2018.

This is what we mentioned on Tuesday, the 25th of January 2016: *Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.*

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

This is what we mentioned the 18th of Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in*

mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.

This is what we mentioned on Monday, the 8th of August: Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12th February 2016, S&P moved more than 360 points rally which no one expected.

This is what we mentioned on the 29th of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

Thirty Year Bond

This is what we mentioned on the 10th of September: *Tuesday Thirty Year Bond gained value, and same indicating on Wednesday. Fed may leave rate decision sideline which can push bond toward 168/169. Rate hike may bring prices 162 level. Overall trend is negative so get ready to sell on any rise if FED refuse to hike.*

In the last ten weeks' bond prices came down from 176 to 165 as predicted and our longer-term view is very negative so keep building sell positions on any rise.

By the end of this year we may see 162-25 and 157. Stay long in TTT, TBT and TMV.

Energy:

This is what we stated on Monday, the 17th of April: ERX lost more 5% value and if ERX trade below \$30.00 then there are chances that it will test \$25.50 level which means oil prices will trade negative in coming time.

Once again oil will try to test \$54.78 but if this week it fails then we may see \$47.00 level once again. Major astro support point is \$49.88 level. RB Gas and HEATING OIL will follow oil.

On Monday oil prices will trade mix to negative but in USA trading one can take small buying, if oil fail to rise on Tuesday then expect major corrections in once again in coming time.

On Monday Natural gas will trade mix and prices will move both sides, trading in and out will remain best strategy in gas on Monday. Sell or short around \$3.38 level.

This is what we mentioned on the 8th of January - Natural gas went down sharply as predicted and tested \$3.16 from \$3.83, and the volatile trend will continue in GAS so trade carefully. Oil will only be able to move higher if it closes above \$54.78 for three days which we don't see happening.

Energy stocks traded mixed. ERX is unable to move above \$43.00 and oil above \$54.78 which is not a good sign for the energy market.

We are not changing any of the predictions we mentioned on the 3rd of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it must close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is

recommended around \$48.88 level and on the down side the important level to buy is at \$44.55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2nd of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

This is what we mentioned in our book "2016 Financial Predictions" in oil's section:

IMPORTANT NOTE: *As most of you are aware our view for energy has been very negative since June 2014. The overall trend in energy prices will remain negative so we do not recommend adopting long term positions. This means that do not take any trades earlier in the year and continue holding them for the rest of the year, because the higher side in oil will remain limited. There will be better opportunities to make money by trading in and out. Heating oil and RB gas will follow oils trend, so during this year we may see oil moving towards \$48.50 or \$52.95, and on the down side it may hold \$34.55. If it closes below \$35.55 for three days then there are chances that oil prices could fall towards \$29.65. Traders should take advantage of buying short term call options before any of the above-mentioned cycles start, and also book profit quickly before the positive cycles end.*

Energy stocks will trade mixed without any major movement, so longer term investors should not be putting any money in energy stocks. Any sharp rise should be taken as a profit booking opportunity if you are holding any energy stocks.

Natural Gas' trend will remain positive during 2016, so one can stay long in Natural Gas in the year 2016. However, it is very important to remember to keep booking profit before any of the above mentioned negative cycles start. Overall, Natural Gas will outperform oil in the year 2016.

For short term strategies and price targets please follow our weekly and daily newsletters.

Ninth Cycle:

From the 26th of November to 31st of December 2016 - During this cycle, we see positive momentum coming back in the energy markets; oil prices will form a bottom, and oil stocks will also act positively. Even though this is a positive cycle, the higher side will remain limited. Natural gas and RB gas will move sharply higher during this period.

Energy trading ranges for 2016:

Crude Oil: \$52.95 to \$29.78 (As predicted last year, oil may hold the \$30.00 level, and if it trades below that for five days, then there's a possibility that it could test 2002's low of the \$27.78 level)

Natural Gas: \$2.88 to \$1.82 (higher side \$3.57 if it cross \$2.88)

Look at accuracy levels about oil that we predicted in the book.

This is what we stated Monday, the 31st of Oct 2016: *Friday oil, heating oil and RB Gas traded negative as predicted. Energy stocks also went down but gas traded mixed. On Monday, oil will trade negative; stay sidelined or those who are holding shorts can continue holding and cover some around \$47.50. If oil starts trading below this, then expect \$46.75 to \$44.88 level, cover all shorts at \$44.55 level. Heating oil and RB Gas will trade negative or will follow oil. On the higher side, oil will struggle to remain above \$49.88 level which is the most important astro resistance level.*

Natural gas will trade on both sides without any clear directions so avoid trading but on the lower side one can buy GAS for Tuesday. Don't touch energy stocks as they will keep struggling.

This is what we mentioned on Friday, the 2nd of Sept 2016: *On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue Friday. One can cover 50 to 70% shorts around \$42.61 level in oil and 100% around \$41.78, so one can cover positions in heating oil and RB Gas on Friday.*

This is what we mentioned Monday, the 21st of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on the 27th of August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

This is what we mentioned on the 27th of April 2015: *Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January 2015: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December 2014: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we stated on the 4th of January, 2017: *We don't see dollar index going above 103.78 level so watch closely and closing below 102.55 will push dollar toward 101.55 level. Most of currencies gained nice value on Wednesday, emerging market currencies had best day.*

On Thursday, most of currencies will trade both sides, buying is recommended on lower sides in most of currencies so don't miss opportunity.

Buy Pound, Yen, Australian dollar and Canadian dollar. Also buy Franc and Euro without fear.

Astro cycle changed late today on 3rd January so safe buying in all major currencies against USD.

Dollar closing below 102.75 will confirm that it would test the 101.55 level this week.

We are not changing any predictions in currencies of what we mentioned on Monday, the 31st of October 2016: *Once again tested 99.00 level but then sharply came down from the middle of the trading sessions. We are still recommending to keep building positions in USD around 99.00 level. On Monday, we still recommend buying Euro and other currencies around the lower side, or selling USD around the higher side level. On the down side USD may hold 96.71 level so watch this level closely. Euro can move up to 1.1111 level in this week, so book profit if it goes there.*

On late Monday, the Scorpio Moon will bring both sides volatility. On Wednesday, the FED will announce decisions and due to the Scorpio Moon traders will get confused. Trade light or just trade in and out in currencies but medium term traders can hold selling positions in USD.

Stay short in Yen but one can cover Japanese Yen as it may move towards 0.9525 to 0.9250 level at this stage.

This is what we mentioned on Monday, the 29th of August 2016: *We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below*

0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.

This is what we mentioned last Monday, the 25th of July 2016: This is what we mentioned on Wednesday, the 13th of July: Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.

Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list until it holds this level.

On Monday, the 11th of April 2016 we stated: Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.

This is what we mentioned last Thursday: Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned on the 22nd of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23rd of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

Dollar is our longer-term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium- and longer-term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on Monday, the 15th of Jan 2015: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the*

nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year's book "2015 financial predictions" we predicted the "final bear cycle in the market from the 27th of July to the 15th of August 2015". Yes, the Sun can bring some uncertainty, but take this uncertainty as a buying opportunity at the same time in 2015 in the month of August.

Watch the 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
