Friday Daily Flash news (Unedited report)

Oil achieved \$27.71 level and S&P held 2771...

Dear Members,

Oil gained from \$10.00 to \$27.71 in the last 17 trading days. It was one of the best call against the uncertainty of what we saw in May-2020 future contracts. On 21st April I disclosed I just bought oil.

On other hand S&P held 2771 level which is great news, yesterday we mentioned that though we are in negative cycle but may not see one side move in market. Short term positive days may impact trend in market. Thursday was positive astro

day and market acted positive which is good news.

According to my theory softs bottomed out, and grains will bottom out from next week.

Emerging market currencies gained value, frontline currencies traded mix.

Gold and silver prices gained, base metals lost value on Thursday as predicted. Stay long in gold and silver.

Financial stocks performed well after news brokeout GOLDMAN buying Wells Frago. USA institutions are doing great financial engineering.

Our top picks like **REGN, VRTX, ALNY, DXCM, LVGO, NFLX, AMZN and MSFT** are performing amazingly well.

Since first week of February we have been recommending buying these COVID-19 stocks, many already went more than five folds. Still these stocks are in our buying list.... We recommended most of these stocks and most of them have gained value.

Markets will remain volatile at this but neither side aggressive trend is indicating so follow our trading ranges to take trades.

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
