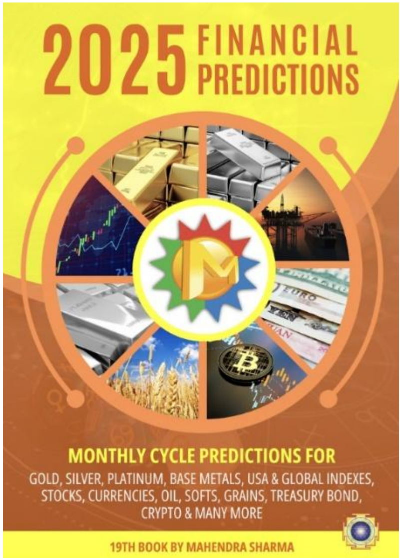
Tuesday's Daily Flashnews

Finally, a great time to make is knocking on your door…

Dear Members,



On Monday, the markets lost value. Gold hit another all-time high, the dollar lost a lot of value, and the Bond market also lost value. On the other hand, energy prices traded sharply lower, grains struggled, and softs also struggled.

Trump's trade and tariff war brings the most uncertain time in history. Still, as I follow astro combinations, it is getting very clear that the next five weeks will be volatile, but this is a great buying opportunity in stocks. I know choosing a stock is challenging, but I always try my best to provide you with a great stock list. History has shown that most of our recommended stocks have provided windfall, and the same will happen this time.

On the other hand, gold went sharply higher. I took some small put options positions in gold, though our view is still extremely bullish, per our book. The higher side prices has been achieved, so I will respect that.

The US dollar lost a big value on Monday, but it is coming closer to making a lifetime opportunity by buying USD, as we don't see it going below the 97.38 level.

The 30-Year bond lost value, and I don't see it remaining below 112-00 in the near future, so this is another lifetime opportunity to make money.

Let's talk in detail in the individual sections below.

<u>Tuesday's trend for all the markets, commodities, currencies, and bonds:</u>

GOLD/SILVER/BASE METALS

On Monday, most metals struggled to perform well, but gold moved higher in a one-sided trend, making another all-time new high. I still remember my prediction in 2001, when I was launching my first book in South Africa. Gold was trading around $272, and I said Invest in gold and you won't regret it until 2051, as it will keep rising. We provided the first cycle target of $1800, the second cycle target of $3000, and the Third cycle target of $5000. We never revealed the fourth and fifth cycle targets as I wanted these targets to be achieved first, and they were. It is incredible to witness that what we predicted for the longer term has come true step by step.

Anyway, I took small, short positions by buying put options, which I am a bit nervous about, as the way everything (markets, currencies, bonds) is trading, and the trade war news is dominating.

On Monday, the astro combinations were not supportive, and we witnessed that most of the metals struggled except for gold. On Tuesday, the Astro combinations are still unsupportive, so I will add more short positions in gold by buying put options, so no open risk is involved. This week, we still see metals struggling, but as mentioned, if this week metals act positively, that will be very bullish news for gold and other metals, so watch this week closely.

On Tuesday, sell metals around the higher side levels, don't buy mining stocks, and take sell positions in JNUG and NUGT. By this Friday, we will know whether to cover shorts in gold and mining stocks ETFs.

I don't want to short gold as it is my favorite metal due to a longer-term powerful astro chart. Still, I respect the Astro combinations, and the short-term astro combinations just turned negative from Monday evening, so I will respect that.

Important note of Monday: If metals don't close negative from Monday to Thursday, then we will predict gold and silver having most crazy rally, but this week we see all these days metals coming down from higher sides.

- The medium-term resistance is $3468 for Gold and $35.55 for Silver. Astro support for gold is $2928 and $29.11; closing below these levels for three days will be bad news for both metals.
- Platinum's Astro resistance level will be $1197, and the support will be $825.
- Major astro resistance for copper is $471, Astor support is $431, Palladium's Astro resistance level will be $1243, and the support will be $728. The next resistance for Nickel will be $23778, and the support will be $15088. Aluminum's Astro resistance level will be $2711, and the support will be $2138

Tuesday's Astro combination recommendation: Sell precious and base metals on Tuesday. I took a small put option trade in gold on Monday and will add some more today as the price rises.

Tuesday's trading ranges: (Continue 2025 Contracts):

GOLD: $3459.90 TO $3395.00 (Spot: 3465.00 to 3397.00)

SILVER: $33.19 TO $32.45 (Spot: 32.78 to 32.41)

COPPER: $477.80 TO 463.10

PLATINUM: $987.00 TO $950.00

PALLADIUM: $945.00 TO $890.00

INDEXES

On Monday, the market lost a lot of value, and selling pressure intensified in the US market. A few of our members even wrote to us saying that technicals are getting very bearish. A few of our members sent charts and notes, as they are very worried about the markets.

Yes, the current time is not that great for anyone. It is always a warning time for the bear because a new cycle has started since the 11th of April, which is neither favorable to the bulls nor the bears. We saw what happened on the 10th of April, when the market rallied and moved crazily higher just 12 hours before the new cycle started. Maybe this cycle started on 10th, not the 11th of April.

I know everyone is worried about the trade war, but I repeat that the USA will be the only winner. You will see that from June 2025 in the fifth cycle, so I recommend buying stocks and building long positions in US stocks today. The reason I am saying this from today is that the market is neither supporting the bulls nor the bears.

Markets are close to our crucial astro support levels; we already predicted that we don't see the market going below the March level, so weakness from here will be one of the great money-making opportunities if you invest in the market at the current levels. Significant volatility is still expected on both sides throughout May 2025, but the market is bottoming out, so this is a great time to keep adding long positions on weakness. Bears will also lose a lot of money at the current time. It's a warning time cycle from the bull and bear, which means that the markets will aggressively move in both directions during this cycle.

Today, the markets may rebound, and if that happens, it is a warning sign for those who are holding cash or shorting stocks and the market. Traders and investors should start deploying cash in the market every week for the next few weeks.

Tuesday's Astro combinations are mixed and negative, but one Astro combination is hidden and showing a great sign, so I will be watching it very closely. In the weekly newsletter, I clearly said that this week is not a positive one for the market, but if the market turns around this week, we may see a mega rally.

Day traders can book a profit on the higher side. TESLA earnings will be out today, and we are all aware of the numbers, so nothing new is pending, as everyone is bearish on TESLA. I will be buying TESLA on weakness on Wednesday. Wait for next week's weekly newsletter, as it will be one of the most important letters I have ever written.

Dollar, and Thirty Year Bond are also putting pressure on the US markets, but they will turn around big in the coming weeks.

We still recommend buying some long positions in LABU and NAIL. These two sectors will perform very well in the medium term.

Important note of Monday: if the market close in the green from Monday to Thursday, then I will recommend getting ready for aggressive long positions next week. This week is a negative or uncertain week, so keep this in mind.

In May 2023, when NVDA was trading around $375, we predicted it would reach $975 to $1275 within the following year.

Since 2011, we have recommended adding all these stocks and still recommend adding long positions. They are TSLA, MELI, NFLX, DXCM, AMZN, Google, MSFT, Apple, VEEV, AMD, NVDA, HZNP, VRTX, MA, V, BAC, HZNP, COST, and REGN.

- Critical, very short-term Astro support for S&P and NASDAQ will be at 4803 and 16328. Both indexes trade three to five below these levels. Astro resistance for the NASDAQ will be at 5755 and 20288.

Tuesday Astro combination recommendation: On Tuesday, take long position in the market around the lower side.

Tuesday's trading ranges (Continue 2025 Contracts):

HONG KONG (cash) – 21437 to 20108

NIKKEI – 34654 to 34005

NIFTY S&P (Spot) – 24100 TO 23848

DAX – 21285 TO 21108

FTSE – 8309 TO 8222

CAC – 7254 TO 7151

DEX EURO STOXX – 4915 to 4843

S&P e-mini – 5259 TO 5131

NASDAQ 100 e-mini – 18239 TO 17648

RUSSELL e-mini – 1868 TO 1825

DOW e-mini – 39059 TO 37901

CURRENCIES

On Monday, most of the frontline currencies gained handsome value, but struggled to close above the higher side level. One should also remember that the dollar index wont remain below 97.38 during the next 5 years, so we are very close to the top in the currencies, or the top in the dollar.

On Tuesday we are still recommending taking short positions in most of the frontline currencies around the higher level as mentioned in the daily ranges, and I am sure that you will do extremely well in the coming time.

On Monday the Canadian and Australian Dollar, both the commodity currencies struggled to perform well, and both these currencies should be in your selling list.

Emerging market currencies struggled yesterday. It is a great time to short most of the emerging market currencies and buy the USD against these currencies.

No external power on this planet can push the USD lower after the 7th of May, so until then remain a short term trader and sell around the higher side. Quickly buy if you make 150 or 200 bips. Those who have deep pockets can hold short positions in the currencies with a maximum 1.5% risk on the higher side. Those who don’t have deep pockets can buy put options in the Euro, Pound, Swiss Franc, and Yen; or buy call options in the USD.

Tuesday will be the day to sell most of the currencies. Yes, I am aware that the FED is ready to cut rates, which may bring weakness in the USD for one day, but nothing apart from that.

- The US dollar Index breached a critical astro support level, which is not good news at this stage, but still, the dollar could rebound from here toward the 104.65 level. AT this stage, USD must not close below the 100.21 level for over three days.
- In the short term, the critical Astro support levels for the frontline currencies will be: Australian 0.6051, Canadian 0.6803, Pound 1.0475, Euro 0.9645, Franc 0.9925, and Yen 0.6618. The Euro will have a critical Astro resistance at 1.1539, the Pound at 1.3207, the Canadian at 0.7518, the Australian Dollar at 0.6495, the yen at 0.7388, and the Swiss Franc at 1.2398.
    - Rand 16.71, USD/Peso 16.82, REAL 4.83, and Rupee 83.08 are these currencies' crucial Astro support levels. On the higher side, the Dollar may struggle to close above these Astro resistance levels against Rand 19.28, Peso 21.88, Real 6.33, and Rupee 86.88.

Tuesday Astro Combination Recommendation: On Tuesday, start building short positions in most currencies, but remember, volatility is expected to continue in frontline currencies. Emerging market currencies will fall big in the coming days.

Tuesday's trading ranges (Continue Futures Contracts 2025):

DOLLAR INDEX – 98.68 to 97.68

AUSTRALIAN DOLLAR – 0.6459 to 0.6375

CANADIAN DOLLAR – 0.7269 to 0.7200

BRITISH POUND – 1.3309 to 1.3260

EURO – 1.1621 to 1.1460

JAPANESE YEN – 0.7169 to 0.7100

SWISS FRANC – 1.2573 to 1.2411

USD/RUPEE – 85.28 to 85.01 (Spot)

USD/RAND – 18.87 to 18.63 (Spot)

USD/PESO – 19.78 to 19.65 (Spot)

USD/REAL – 5.83 to 5.72 (Spot)

ENERGY

On Monday oil, heating oil, RB gas, and natural gas lost value. If oil trades negatively on Tuesday then it will be a very negative sign, but remember that in this weeks weekly newsletter we recommended buying oil so I wont recommend taking any short positions in oil. If you have any short positions then cover them. On Tuesday we still see oil, heating oil, and RB gas trading higher.

Natural Gas traded negatively. Our view turned negative for the last three weeks, and it has been falling non-stop since then. We still do not see any upwards trend but it is coming to our astro buying level of 2.88 which indicates that one can start buying some positions because from the first week of May gas will start moving higher.

- Astro's support level for oil is $57.68; on the higher side, $68.98 is the astro resistance level.

- Natural Gas will have significant Astro support at $3.00 and significant Astro resistance at $3.88.

Tuesday's Astro combination recommendations for Oil: On Tuesday, add a small long in oil around the lower sides, but remain short in gas.

Tuesday's trading range (Continued future 2025 contracts):

OIL: $63.25 to $61.71

NATURAL GAS: $3.27 to $3.05

HEATING OIL: $2.0930 TO $2.0537

RB GAS: $2.0965 TO $2.0280

GRAINS

On Monday grains traded in an uncertain to negative trend, and the negative trend will continue this week as recommended in the weekly newsletter so stay away from any buying. They are getting very close to our important Astro support level so get ready to buy grains around the lower side

On Tuesday we see most of the grains trading on both sides. If you have deep pockets then one should start buying some small long positions from today.

- *As mentioned, corn is not below the significant Astro support of $451, Wheat at $503, and Soy at $953. Now short-term astro support or buying leels are $477, $541, and Soy $1013. Corn's key resistance levels will be*

$556, soy at $1079, and wheat at $611; these are the profit-booking levels for the short term.

Tuesday's Astro combination recommendations: On Tuesday, the weakness of an uncertain trend will continue.

Tuesday's trading range (Continue Future contracts 2025 contracts):

CORN: $495.00 TO $487.00

WHEAT: $559.00 TO $549.00

SOY: $1045.00 TO $1029.00

SOY MEAL: $302.00 TO $294.00

SOY OIL: $48.95 TO $47.89

SOFT COMMODITIES

On Monday, most of the softs traded negatively, except for Cocoa, which gained value. On Tuesday, we are still not recommending any buying in softs except for Cotton, so stay away from any buying in Coffee, Cocoa, and Sugar. Our longer term view is still optimistic for coffee, but I am waiting for the good astro cycle to start, or for it to hit our lower side Astro support level at $325.

- This is what we have been mentioning: Cotton will be a great buy at $61.11, and its Astro resistance will be $70.21. Sugar has an astro resistance level of $21.71 and support at $16.51. Cocoa's Astro support is $ 7,195, and resistance is $9,088.

- Coffee will have an astro support level of $343.00; on the higher side, extreme Astro resistance will be at $392.

Tuesday's Astro combination recommendations: On Tuesday, we see a mixed to negative trend in softs.

Tuesday's trading range: (Continue 2025 future Contracts):

COFFEE: $370.10 TO 359.17

COTTON: 67.63 - TO 66.15

COCOA: 8718 TO 8507

SUGAR: $17.93 TO $17.69

TREASURY BOND

On Monday Thirty-Year bond lost significant value, but remember that we do not see the Bond market trading below 112-00 so this is a great time to take long positons in Bond. If you have deep pockets then take very aggressive positions in Bond on any weakness from here onwards.

On Tuesday both side moves are expected in the Bond market but add long positions around the lower side.

- Bond must close above 122-00 for three days for a bullish trend, which could push prices toward 131-28. Short-term significant astro support will be at the 112-00 level.

Tuesday's Astro combination recommendation: Add more long positions around lower sides on Tuesday.

Tuesday's trading range (Continue 2025 future contracts):

TREASURY BOND – 113-00 TO 112-15

Thanks & God Bless, Mahendra Sharma

21st April 2025, 3:00 PM Santa Barbara

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
