Weekly Newsletter from 27-1 May 2020

**We are in final positive 9 days...world needs to learn to live along with
Coronavirus...**

Dear Members,

Last week the global equity markets acted far better. S&P held our Astro support level of 2721 and closed above 2800 on Friday. There is no doubt that there are huge challenges for the world right now because the business cycle has completely stopped, and unemployment rates are rising. We have received many emails asking, "Mahendra, when will the world become a normal place?". I have already provided an answer that by the **30th of June** the world will become a normal place. This means that a drug will be available by then, and in fact my astrological combinations indicate that within the month of May we shall have a drug which will be a sign of relief for the world. At least once there is a drug the fear is going to go away. I expect a vaccination to come out by the end of September or by 15th of October, which will be another relief for the world, because then everyone will feel safe from the Corona illness.

Since Saturn started in Capricorn, major earthquakes became in normal human life. Our way of thinking, our way of working was impacted due to everything that has occurred, and we will see the impact of this in the future. 27 years ago, the same Capricorn Saturn brought huge changes to the world, which was when

telecommunication and technology started being integrated in human life, and it has become an integral part of human life since then. The same Saturn will now bring about a change in our way of thinking and conducting business, and it will also greatly change our focus to human health, biotech, and pharmaceutical areas. For the next 27 years I see biotech and healthcare sectors continuing to expand in multi-folds.

In 1995 I recognized the tech revolution and I was able to accurately predict how technology would change the world. That prediction provided a great amount of returns which nobody can calculate at this stage. My job is to see a vague picture of the future and I represent my vision to my members. But these are longer term pictures, so do not act on a very short-term basis if you really want to create a fortune. Right now, is for you to focus on healthcare, pharmaceuticals, and biotech related areas as there is a great potential to make limitless money here.

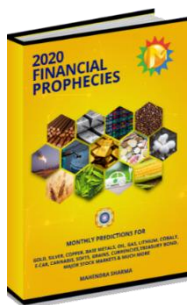

Surely, technology will play a significant role in advancing the healthcare and biotech areas. This is a great area to invest in but remember not to take any short term speculative positions and hold your investments in biotech and healthcare for 10-15 years and I am sure you will create a great amount of wealth for yourself. If you read this year's book (**2020 Financial Predictions**) then I clearly mentioned to focus on the healthcare and biotech sectors as this year they were our top picks. The time has come to shift your portfolio only in two sectors: healthcare (healthcare services, insurance, biotech, hospitals, pharmaceuticals, medical equipment, robotic technology, etc.)

In this book we also advised people to stay away from real estate investments. Surely, if you need to buy a home to live in, that is an exception. But do not take any extra burden by investing in the real estate market. In the future coming time, many sectors will lose their value. Like in 2015 we mentioned that the oil

market is going towards a longer-term bear market and during that time I said that I would not be surprised even if oil goes to \$10. You can visit the 2015 prediction on our website along with all our past predictions. Not only the energy area, but in the future many commodities will lose value. Many industries will shut down because of lower demands. The world will change drastically from here onwards.

IMPORTANT NOTE: Once the world becomes a normal place from the 1st of July, then we may see huge business activity starting in the industrial sector and across all major business cycles. Business exports will grow beyond our imagination at least for 6 months. This will push the market towards an all-time high and that could be the reason why we said S&P might hit 5000 by 2021. I strongly believe that S&P will hit 5000 but comparatively, NASDAQ may gain 40% more value than S&P. It is a great time to bet on NASDAQ index for the longer term. Surely from the second week of May to June some volatility is expected in the markets as predicted in our book but once June ends, the most exciting period is starting to make money. I won't be surprised at all if NASDAQ moves to 20000 by the end of next year. Keep cash on the sidelines and from July onwards follow each of our recommendations closely because we do not want to miss any opportunity to make money. Who says that it's difficult to make money in the market? I think you will create history by following our work and you all should put out a small note by the end of 2021 about whether you were successful or not, and I will publish all the testimonies on our website.

As per our book “2020 Financial prophecies”, Now we are running is the third positive cycle which started from 23 March and market have been moving higher since third cycle started. Now positive third cycle which started on 23rd March will end on 5th May 2020, so interesting to watch.

This what we mentioned in the third cycle in “2020 Financial Prophecies”

Third Cycle: From the 23rd of March to the 5th of May

During the first seven days of this period there will be volatility, but on any sharp correction between the 23rd of March to the 31st of March, one can buy some positions in indexes or stocks on weaknesses. During the month of April, the stock market will move higher once again. During this period, we see biotech stocks rallying in a big way, along with mining and commodity stocks. By the end of this cycle, I strongly recommend booking profits if the stocks rally well as the next cycle is negative.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
