Edition: 7893

3 January 2018

Wednesdays Daily Flashnews (Unedited report)

Watch gold prices as it is getting ready to move multiyear high

Close 50% UVXY and buy TEUM

Dear Members,

The first day of 2018 remained very volatile and it looks like globally the markets have decided to move in their own direction. Most of the Asian markets traded higher, but the Indian market struggled. Most of the European markets traded lower when the USA market moved higher. Globally the markets behavior pattern looks very uncertain even though the USA market is going higher.

Commodities traded mixed but precious metals are showing a real shine. Our view on precious metals has been positive and is now turning more positive. Gold can move aggressively higher in the coming time, and gold prices can surprise everyone. Coffee is another one of our favorite commodities and it performed well during the last five trading sessions.

Thirty Year Bond went down sharply lower with Dollar Index.

Most of the currencies gained against USD. Dollar may test 90.78, the level it rebounded from two months ago, but dollar still looks like our favorite currency in 2018.

Globally the market will face a testing time after Friday this week. I am not recommending any buying in the market at this stage. On the higher side the US market can move 1% higher, but there is a significantly larger lower side coming from next week so get ready.

The energy market traded mixed but remain alert as we are close to a top.

Base metals made a top yesterday, and they may make another top in the next 48 hours before they collapse.

I feel good, and am focused on the astro cycle so now get ready to take 100% bets as per our theory.

Crypto currencies traded positively, **TEUM and DPW** traded sharply higher. I am recommending to buying **TEUM** and DPW. TEUM is our favorite trade. It moved 30% yesterday, and I expect it move 500% to 1000% in a few month's so one can sell half of your positions in UVXY and buy TEUM.

Yesterday **lithium stocks moved sharply higher**, I am sure you are invested in this sector. If not then put money in this sector without fear. Yesterday many stocks moved 10 to 30% higher. LIT also made

a big move. In Indian also related to same sector our recommended stocks went higher more than 700% in the last six months, and these stocks were **Graphite Ind, Goa Carbon, Himadri Spec chem, and HEG**. Also other favorite like **High energy batt and Camlin fin**.

This is what we started yesterday: *At this stage there are a few things happening which should be monitored closely. Gold closed above \$1298, coffee held \$118, and closed above \$122, oil is very close to \$61.38, and dollar is heading towards 91.51. On the other hand, S&P traded negatively on Friday, and our negative trading pattern date is very close, and is starting from the middle of this week.*

Overall 2017 was a mixed year for grains and softs. Energy and base/precious metals performed well, and stock markets provided huge returns.

One of our members Jeff stated that 2017 was his worst trading year after having great years, and he hopes that during 2018 I will be able to provide the right path. Yes, I will try my best because if I keep coming wrong then I will not only lose members, but I will also lose my reputation. 2017 was one of the worst years in my predicting career because over the last two decades traders made a fortune following our advice, but during 2017 they suffered following our view.

Many will be back from holidays by this weekend, so this week will be a light trading week. I will try to finish my book in the next two weeks.

On Tuesday we see the markets trading mixed, but surely profit booking will continue dominating the European and US markets. We expected S&P to test 2625 first and that shall take place by the second week of January.

Gold and Silver are surely giving signs of recovery, and so far, they held value around the lower side as predicted. Now, if gold closes above \$1298 for three days then expect the gold bull market to start, and this move can support silver and platinum. Our view is now turning very bearish for base metals and energy over the next few days so watch them closely.

I am adding crypto currencies from to the Daily Flashnews and Weekly Newsletter from the middle of this week ONCE I REACH Mumbai.

*Here is a small note on crypto: Last month I stated that bitcoin will fall from the 7th of January but already it corrected so, **if bitcoin and crypto's don't fall between the 7th and 11th of January then a new bull era in crypto currencies will be born.** I have finish studying Crypto's, so surely our members must get ready to trade all crypto currencies as per our time cycle.*

*Last week we mentioned a few stocks that are listed on the US exchanges: A few more stocks related to crypto currencies are out there and they are Pareteum Corp (**TEUM**), Digital power (**DPW**), and (**ARSC**). These are networking and AI related which could be taken into the crypto currency area.*

OSTK – Overstock CEO is supporting and Investing in blockchain. The stock has been soaring over the last six months from \$14.00 to \$62.00. I am not recommending investing at this stage, but watch this stock as the coming time will be interesting.

OTIV – It is a non-cash dealing company, and is entering to deal with bitcoin. The stock soared but we are not recommending buying at this stage. Surely you can track this one as well.

Watch a few symbols closely like **GBTC, LFIN, CRCW, and BIOP**. CRCW has been suspended from trading but will start trading on the 3rd of January. Trade any of these products with your own risk. I own a small quantity of **LFIN**.

Watch closely this week:

Energy and base metals will make a top from the middle of this week.

Weakness in the European equity market will continue and after the 5th of January the market can start a big downwards journey.

A great opportunity to buy USD is on the way from the middle of this week

Precious metals are at a very important juncture, and can blow on the upside toward multi-year high. Gold may test \$1509 or \$1695 so follow our letter closely. Coffee will along with gold.

This is what we stated yesterday: Frontline lithium stocks traded negative for mid-cap and small cap were in demand. **LTUM** remained in demand (we recommended buying at \$0.08) and it will keep moving higher in coming. Let's see whether it tests \$0.65 level during this week or not, we are expecting it test \$1.18 level.

This is what we stated on Monday: S&P closed at 2581, it can move or test 2723. **IF THE MARKET DOESN'T FALL BY NEXT WEEK** and market may test 2723 level but I don't think S&P can test 3200 level which was predicted in 2009 because now **overall the astro cycle has turned negative for the markets for the longer term**. Next aggressive selling level will be at 2700 if market keep moving higher. The day it gives signs of weakness will be the day to jump and go all in with longer term bear bets on the market. S&P will not only test 1818 but it will test 1557.

Watch the important support & resistance levels updated on Monday, the 2nd of January 2018:

- Gold started trading above \$1298 which confirms that gold may test \$1319, \$1343, and even \$1357. The major astro support point will be at \$1283 and \$1298. Silver and Platinum will follow gold.
- Oil will hold \$57.88. Oil will test \$60.88 to \$61.38, and these are selling levels. Sell gas at \$3.14, and buying is only recommended at \$2.68. ERX traded above \$30.50 which is a positive sign for energy stocks and it may test \$38.55.
- Thirty Year traded negatively as predicted, and now the major astro support will be at 147-00. One can start buying TTT, TBT, and TMV.
- S&P's first important resistance will be at \$2725. NASDAQ's astro resistance will be at 6587 and Russell at 1555. On the down side we may see 2625.
- Sell Pound aggressively at 1.3728 and Euro at 1.2088, but do it from the middle of this week.
- Buy dollar around 91.00 or below. One can start buying it from 91.55. **Last month USD bounced back strongly from 91.00 as predicted. It was a strong buying recommendation at 91.00 which proved prudent.**
- I am sure you must have closed all longs in cocoa and orange Juice at \$1800 and \$133. Cotton and coffee started acting positively. The next level will be at \$82.78 and \$128.55. The major astro support for coffee is at \$118, sugar \$13.71, and cotton at \$67.68. In the worst-case scenario coffee may test \$112 or even lower if it closes below \$118, but a longer term bullish astro cycle is about to begin. Close longs in cotton around \$78.78.
- Soy oil has had a major astro support at \$32.11, and resistance at \$35.11. Selling is recommended at \$34.88.
- We have been stating that Corn will hold \$340, Wheat \$421, Soy \$952, and Meal \$305. On the higher side, the astro resistance level for wheat will be at \$525, Corn \$388 to \$433, and Soy at \$988 - \$1038 to \$1059.

- Orange Juice will have a major support at \$132 and it is a must-buy. Cocoa must be in your buying list at \$1800. Lumber will fail to move above \$480, and cocoa will come down from \$2259.

Here are the trading strategies and ranges for Wednesday:

GOLD/SILVER/BASE METALS

On Tuesday, the first trading day for 2018, gold, silver, and platinum prices went higher. JNUG and NUGT, moved higher too, as predicted. Base metals also went higher but they are now ready to collapse, so get ready and take some serious short positions in base metals like copper, palladium, zinc, nickel, and lead. All these base metals will have the worst time so don't fear your short positions.

On Wednesday weakness should be taken as a buying opportunity in gold, silver, and platinum. The short to medium term astro cycle is very positive for gold which will help metals on both side. On the lower side is our buying recommendation is on Wednesday in gold, silver, and platinum.

This is what we stated yesterday: *The Astro cycles have turned positive for gold. Gold tested \$1238 and we recommended buying it at that level. It crossed \$1263 and \$1298 which is a very bullish sign. The coming time is turning very bullish for gold, so get ready to buy some serious futures call options if Gold holds \$1298 for the next five days. One can buy with strict stop-loss at \$1283. **If my astro cycle and golds trend matches this week, then I am raising my target for gold to \$1509. Gold will outperform silver, platinum, and the rest of the metals.***

Buy silver and platinum from Tuesday. Buy positions in gold, mining stocks, or you can buy GLD, JNUG (Junior bull market ETF's) and NUGT. Stay away from DUST.

I still recommend buying gold, silver, and platinum rather than mining stocks because the stock market situation can get ugly. I have been wrong for the last six months about the stock markets trend, but that doesn't mean that the dark clouds are over for the market.

Yes, I have been wrong on base metals and I don't feel shame to accept my wrong prediction, but I still hold my prediction of a fall in base metal prices. Yes, prices may not crash that hard, which I expected last year, because the current trend in precious metals will try to support them, but we are still recommending selling base metals from the middle of this week.

Base metal prices could crash from the 7th of January so remember this. This is a great level to sell Copper at \$330.00 and we may see the next level of \$332.80, and Palladium at \$1059 which was achieved yesterday.

Wednesday's astro combination recommendation – Buy precious metals on lower and start selling some serious short positions in base metals.

Wednesday's trading range: (March 2018 contract):

GOLD: \$1323.90 to \$1308.00

SILVER: \$17.39 TO \$17.07

COPPER: \$329.95 TO \$325.90

PALLADIUM: \$1096.00 TO \$1074.00

PLATINUM: \$957.00 TO \$939.00 April 2018

INDEXES

On Tuesday the rest of the global markets struggled except for a few Asian markets, and the USA market. The USA market still has room to move one percent higher from current levels, and I expect the same for most of the global markets.

For the last few months we have been starting that from or after the 5th of January, most of the markets can move down sharply.

On Wednesday we are recommending trading in and out without buying positions in any stocks or indexes. European, and emerging markets will start selling off. The USA will start moving down from next week. Its time to invest in Lithium stocks and ETF's, gold stocks and ETF's, as these are our two favorite areas, however I will still put 75% investments in lithium related areas.

Crypto is doing well, and I will recommend playing TEUM, DPW, and LFIN. Before traders did not have a chance because there were no Crypto Currency investment products available except for GBTC which has done very well. It was purely a play of Bitcoin and crypto. **I like TEUM very much so invest 65% of your UVXY money in this one. Last month I stated that I will only recommend selling UVXY if I find something which can bring back the money lost in UVXY, and I think TEUM is the one which can make you money. Buy and hold positions very tightly.**

Yesterday lithium stocks moved aggressively higher. Our favorite stocks like **LTUM, NVSGF, MLNLF, RRSF, ALTAF, PILBF** and many other stocks performed very well. Now it's time to come back and start trading on our recommendations. Yes I had a bad year, but that won't push me back because I follow the theory which has provided me with great predictions over the last 35 years.

This is what we stated on 28 November: ***If the market doesn't give any indication of weakness on the 3rd of December, then you should stay away from any short positions till the 4th of January or until S&P hits 2725.***

Most of the indexes are right at the top, S&P is at 2725, Nasdaq mini 6588, Russell 1555, Dow, 25055, Dax around at 13582, Brazil 78000, Nifty achieved a top at 10498, South African 55075, CAC 5528, FTSE 7598, and Nikkei 23500. Taking sell positions in most of these markets around these levels will provide great returns in the markets.

Last week, we recommended selling emerging market ETF's, and they came down sharply. This was our recommendations: Sell BRZU around 52.00, INDL around \$99.00 or sell the emerging market ETF EEM.

Wednesdays astro combination recommendation – Trade in and out Asian and emerging, but take shorts in USA MARKET AND ERUOEPAN MARKETS.

Wednesday's trading ranges: (March 2018 Contracts)

HONG KONG (cash) – 30755 to 30445

NIFTY S&P (Spot) – 10479 TO 10403

NIKKEI – 23075 to 22741

CAC – 5311 TO 5261

DAX – 12933 TO 12782

DEX EURO STOXX – 3500 – 3448

FTSE – 7653 TO 7557

FTSE/JSE (Cash) – 52597 to 52205

S&P e-mini – 2701.00 TO 2683.00

NASDAQ 100 e-mini – 6551.00 TO 6488

DOW e-mini – 24838 TO 24740

RUSSELL e-mini – 1557.00 TO 1537.00

TREASURY BOND

On Tuesday Treasury Bond traded sharply lower as predicted. On Wednesday we see more weakness so hold your short positions. Add more shorts on Wednesday around the higher side with a target of 147-00. This is what we started yesterday: Treasury Last week Thirty Year Bond bounced back, and there is a great trading opportunity from Tuesday. We are recommending selling Thirty Year on Tuesday as the worst time cycle is starting from the 5th of January 2017. Tuesday on the higher side one can take short positions in Thirty Year.

We see a max higher side of one point from here, and on the down side we see a price target of 147 by next week.

Buy some positions in ETF'S like TBT, TMV, and TTT.

Keep adding short positions in Thirty Year Bond on any rise.

The overall trend will remain weaker as we expect inflation and rates rising in 2018. We already stated that Bond prices will hit 137 or lower in 2018.

Wednesdays astro combination recommendation – Selling is recommended on the higher side.

Wednesday's trading range (March 2018 contract):

TREASURY BOND – 152-07 TO 150-28

SOFT COMMODITIES

Coffee finally moved as predicted. We recommended buying between \$118 to \$122, with a target of \$128 which got achieved yesterday, but we are not recommending selling any positions as our next target is \$137.50. Buy more coffee on Wednesday around the lower side and add more of the "JO" etf.

Cotton traded lower so don't buy any new positions, as \$78.78 is a very important level. Buy if it closes above this level or buy at \$75.15.

Avoid Cocoa, Orange Juice, and sugar, and add more short positions in Lumber on Wednesday.

This is what we stated on last week Monday: *Coffee have been trading around \$120 and holding \$118 level which is good news. Cotton have tested \$78.00 level, it achieved higher side target level of \$78.78 level and we are sure you must have closed long. Cocoa price lost big value and closed close \$1800*

level. Lumber and sugar traded as predicted, and orange Juice also came down to \$133 level as predicted.

Cotton prices moved or close above \$78.78 for the three trading sessions then we shall expect prices to move toward 86.50 and \$93.00 so new bull market is could begin as cotton is positive astro cycle.

On Monday mix trading pattern is indicating, cover shorts in cocoa and orange Juice. Later this week we may buy small positions.

Lumber is ready to fall so any rise shall be taken as selling opportunity. Later this week get ready to buy coffee, cotton, cocoa and orange Juice. Sell sugar and lumber on any rise on Tuesday.

This what we stated in the two months: As I said, three of the most important supports in coffee are at \$118, and \$112. We don't see coffee going below \$112 so keep this in mind. Cotton and sugar will remain in a positive trend but close all longs in sugar around \$15.78. 70% Cotton positions can be closed around \$72.72, and after that \$77.77 level. Stay on the sidelines in cocoa, and wait for it to hit \$1800 to take long positions once again. Stay short or add shorts in lumber and Orange Juice on Monday. Overall, Monday will remain a mixed day for soft commodities.

Wednesday astro combination recommendations – Buy small cocoa and orange Juice, stay long in coffee.

Wednesday's trading range: (March 2018 Contract)

COFFEE: \$137.55 TO \$134.75

SUGAR: \$15.45 TO \$14.99

COTTON: 78.12 TO 76.80

LUMBER: 455 TO 448

COCOA: 1960 TO 1908

ORNAGE JUICE: 138.30 TO 133.90

GRAINS

On Tuesday wheat prices moved higher as predicted. The rest of the grains traded mixed. On Wednesday a mixed trading pattern will continue but still wheat will remain firm. Corn will hold value and soy bean will trade on both sides. Soy held \$952 on the lower side as predicted. Soy must close above \$988 to provide us with a clear buying recommendation.

Coffee and precious metals are our favorite commodities at this stage. Wheat and soy will make some serious moves this year, but at this stage in the short-term wheat will outperform. Trade in and out in grains as per the mentioned daily levels.

Trade light in grains.

This is what we stated yesterday: Friday grains prices traded mixed. We are expecting grains to trade mixed as the major astro combinations will only change around the evening of the 14th of January, so remain a short-term trader in wheat, corn and soy. Meal and soy oil will trade mixed at this stage.

Buy soy if it holds \$952 (March contracts), as closing below \$952 could push prices towards \$937.

Overall this is a mixed week for grains so don't hold any short positions in grains, but get ready to sell soy oil on Tuesday around the higher side.

We must wait a few more weeks, and then grains will move into the most crucial astro cycle, so just hold light buying in soy, wheat, and corn as this stage, or buy small positions on Tuesday.

As predicted soy started trading negatively once it started trading below \$988. The next major astro support level in soy will be \$952 so watch this level closely. We are not recommending any major buying in grains until the end of this year. Wheat will hold \$407, corn \$341, and soy \$852.

On Monday trading in and out will remain the best strategy in grains as mentioned.

Three months ago, we recommended booking profit in wheat at \$575, soy at \$988, and corn at \$388, which have proven to be great trades.

Wednesdays astro combination recommendations – Trade in and out, buy very small positions in wheat and soy around the lower side.

Wednesday's trading range (March 2018 contracts):

CORN: \$354.5 TO \$350.00

WHEAT: \$437.25 TO \$428.00

SOY: \$970.00 TO \$960.00

SOY MEAL: \$320.00 TO \$315.90

SOY OIL: \$33.81 TO \$33.20

ENERGY

On Tuesday energy prices traded mixed. Oil is ready to test \$61.38 on the higher side which we have been predicting for the last three months, but I am sure you must also remember that we recommended getting ready to sell it once oil tests \$61.38. I am sure oil will test this level either today or tomorrow. If not, or if you don't want to wait for this level then start taking short positions in energy from Thursday, which is tomorrow.

Sell oil, heating oil, and RB Gas on Wednesday around the higher sides.

Natural gas will be a great short at \$3.15 with a target of \$2.95. Once \$2.95 is taken away then we may see \$2.63 very quickly.

Energy stocks won't be able to move higher from Thursday. We see a big correction coming in energy stocks. ERX MOVED SHAPRLY HIGHER YESTERDAY. WATCH \$37.55.

Note: If oil trades above \$61.38 for five days then we may see oil walking with gold in the coming time, but at this stage I don't see that happening.

This is what we stated last week Wednesday, 6 December: Natural gas came down on Tuesday and breached \$2.95 level so stay away. Don't buy gas at this stage until it remains below \$2.95, because then it could easily fall 10 to 15% more.

This is what we stated two months back: *We are not recommending any shorts in oil. One can stay long or buy around the lower side if oil goes down after inventory. Heating oil and RB Gas will follow oil. One must get out from oil around \$61.38. Oil holding \$44.55 and moving above \$49.88 was a clear bullish sign and we predicted that. Pivot point will be at \$53.88 level.*

Overall last three years we stated: So far, short-term trading has provided great returns in the last 18 months after my selling recommendation at \$97.00 mid-2014. You must remember what we mentioned two weeks ago: In 2001, we recommended buying oil at \$16.78 with the target of \$100 and higher. In August 2008, we recommended selling at \$145 with the target of \$32.00. Once again in 2014 we recommended selling oil at \$100 with target of \$27.71. I couldn't ask more from nature.

Wednesday astro combination recommendations for oil – Sell oil, heating oil and RB Gas on higher sides.

Wednesday's trading range (February 2018 contracts):

OIL: \$61.38 to \$59.78

NATURAL GAS: \$3.11 to \$2.97

HEATING OIL: \$2.0829 TO 2.0365

RB GAS: \$1.7815 TO \$1.7465

CURRENCIES

On Tuesday USD went sharply lower. Emerging market currencies like Rupee and Real went sharply higher. Peso and other emerging market currencies traded mixed.

On the other hand, most of the frontline currencies traded sharply higher. Dollar can trade uncertain or negative for a few more days, but after that dollar will make a big move and stabilize.

Rupee breached the most important level of 63.81 which indicates that Rupee may test 63.11 on the lower side. Real will hold value or will gain value this week.

Euro, Pound, Franc, and Yen will hold value, but on Wednesday and Thursday all these major frontline currencies will achieve tops. Canadian dollar is ready to move sharply lower but sell from Friday.

Australian Dollar will hold value during this week.

On the higher side most of the currencies have achieved a top against USD, but they can hold value this week, as the positive trend in USD is starting late in the evening on the 5th of January. From next week USD is coming back with a strong positive momentum.

Buy Peso as in 2018 as it will gain 20% value.

Pound won't move above 1.3725, Euro 1.2098, and Canadian dollar 0.8089, with a three percent lower side target in the next three weeks. Canadian dollar is on our top selling list as we are expecting a huge crash in 2018.

Dollar Index will trade mixed, but won't go below 90.78, so any level below 91.00 is a good buying level.

For the last six weeks back, we have been stating: A Lifetime opportunity for selling in Euro at 1.2088, Frank 1.0593, Australian dollar at 0.8198, Canadian dollar at 0.8283, and Pound at 1.3775. These are great selling levels, so it is free money in all these currencies. Dollar Index won't go below 90.78 in the worst-case scenario, so we are now very close to the bottom.

1 September we stated: *Finally, great buying opportunity in USD have arrived since we recommended selling US dollar index at 102.75 to 103.78 levels. One must start buying USD around today's lower side levels as USD may make huge reversal from Thursday as predicted in this week newsletter.*

Start building short or sell positions in Euro, Australian dollar, Canadian dollar and Franc. Also close all long positions in emerging market currencies. This is first time we are recommending to close all long positions in emerging market currencies since we started recommending buying in 2016.

Euro will top out around 1.2038 level. Dollar Index will be great buy at around 91.78 level.

The maximum higher side for Australian dollar will be at \$0.8078, and Canadian at the 0.8154 level. Pound will move higher on Monday, so buying is recommended. The higher side target is at the 1.3425 level. Euro closing below the 1.1788 level will bring a bearish trend back in EURO. Euro will be a great sell around the 1.2038 level if it moves there.

USD is a great buy around the 92.50 level; keep adding positions on every point it lowers. In the worst-case scenario, we may see the 90.78 level, but the chances of this happening are at 1%.

Wednesdays astro combination recommendation – Trade in and out in the most of currencies, but Australian dollar will show some positivity and Pound will come in selling list with Canadian dollar from later of this week. Stay away from Yen and Franc.

Wednesday's trading range: (March 2018 Contract)

DOLLAR INDEX – 91.92 to 91.15

AUSTRALIAN DOLLAR – 0.7860 to 0.7795

CANADIAN DOLLAR – 0.8032 to 0.7965

BRITISH POUND – 1.3671 to 1.3541

EURO – 1.2139 to 1.2059

JAPANESE YEN – 0.8968 to 0.8901

SWISS FRANC – 1.0386 to 1.0295

RUPEE – 63.60 to 63.28 (Spot)

RAND – 12.54 to 12.36 (Spot)

London	23:16	Rio de Janeiro	19:16	New York	18:16	Los Angeles	15:16	Sydney	8:16
Tokyo	7:16	Shanghai	6:16	Bangkok	5:16	New Delhi	3:46	Dubai	2:16

Thanks & God Bless, Mahendra Sharma

3 January 2018, 05.00 AM, Hoi An

Small part from past Flashnews:

Remember this what we stated on 22 September 2016: **Gold will struggle to move above \$1348 and silver \$20.28**; these are the selling levels in both these precious metals but remain as a day trader for this week.

This is what we mentioned on 11 August 2016: **Higher side in gold can rise maximum \$15 from current level of \$1348 and lower side more than \$300 by end of February 2017. Sell more NUGT around \$178 and JNUG around \$320; these levels were the previous highs last month. Add more buying in DUST.**

From stock market sections:

INDEXES:

This is what we mentioned on Tuesday, the 25th of January 2016: *Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.*

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

This is what we mentioned the 18th of Jan 2016: *On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

This is what we mentioned Monday 8 August: Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12th February 2016, S&P moved more than 360 points rally which no one expected.

This is what we mentioned on the 29th of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

Thirty Year Bond

This is what we mentioned 10 September: *Tuesday Thirty Year Bond gained value, and same indicating on Wednesday. Fed may leave rate decision sideline which can push bond toward 168/169. Rate hike may bring prices 162 level. Overall trend is negative so get ready to sell on any rise if FED refuse to hike.*

In the last ten weeks' bond prices came down from 176 to 165 as predicted and our longer-term view is very negative so keep building sell positions on any rise.

By the end of this year we may see 162-25 and 157. Stay long in TTT, TBT and TMV.

Energy:

This is what we stated 17 April, Monday: *ERX lost more 5% value and if ERX trade below \$30.00 then there are chances that it will test \$25.50 level which means oil prices will trade negative in coming time.*

Once again oil will try to test \$54.78 but if this week it fails then we may see \$47.00 level once again. Major astro support point is \$49.88 level. RB Gas and HEATING OIL will follow oil.

On Monday oil prices will trade mix to negative but in USA trading one can take small buying, if oil fail to rise on Tuesday then expect major corrections in once again in coming time.

On Monday Natural gas will trade mix and prices will move both sides, trading in and out will remain best strategy in gas on Monday. Sell or short around \$3.38 level.

This is what we mentioned on 8 January - *Natural gas went down sharply as predicted and tested \$3.16 from \$3.83, and the volatile trend will continue in GAS so trade carefully. Oil will only be able to move higher if it closes above \$54.78 for three days which we don't see happening.*

Energy stocks traded mixed. ERX is unable to move above \$43.00 and oil above \$54.78 which is not a good sign for the energy market.

We are not changing any of the predictions we mentioned on the 3rd of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it must close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level and on the down side the important level to buy is at \$44.55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2nd of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

This is what we mentioned in our book "2016 financial Predictions" in oil sections:

IMPORTANT NOTE: As most of you are aware our view for energy has been very negative since June 2014. The overall trend in energy prices will remain negative so we do not recommend adopting long term positions. This means that do not take any trades earlier in the year and continue holding them for the rest of the year, because the higher side in oil will remain limited. There will be better opportunities to make money by trading in and out. Heating oil and RB gas will follow oils trend, so during this year we may see oil moving towards \$48.50 or \$52.95, and on the down side it may hold \$34.55. If it closes below \$35.55 for three days then there are chances that oil prices could fall towards \$29.65. Traders should take advantage of buying short term call options before any of the above-mentioned cycles start, and also book profit quickly before the positive cycles end.

Energy stocks will trade mixed without any major movement, so longer term investors should not be putting any money in energy stocks. Any sharp rise should be taken as a profit booking opportunity if you are holding any energy stocks.

Natural Gas' trend will remain positive during 2016, so one can stay long in Natural Gas in the year 2016. However, it is very important to remember to keep booking profit before any of the above mentioned negative cycles start. Overall, Natural Gas will outperform oil in the year 2016.

For short term strategies and price targets please follow our weekly and daily newsletters.

Ninth Cycle:

From the **26th of November to 31st of December 2016** - During this cycle we see positive momentum coming back in the energy market and oil prices will form a bottom, and oil stocks will also act positively. Even though this is a positive cycle, the higher side will remain limited. Natural gas and RB gas will move sharply higher during this period.

Energy trading ranges for 2016:

Crude Oil: \$52.95 to \$29.78 (As predicted last year that oil may hold \$30.00 level and if its trade below for five days then possibility that could test 2002 low of \$27.78 level)

Natural Gas: \$2.88 to \$1.82 (higher side \$3.57 if it cross \$2.88)

Look at accuracy level about oil what we predicted in the book.

This is what we stated Monday, 31 Oct 2016: *Friday oil, heating oil and RB Gas traded negative as predicted. Energy stocks also went down but gas traded mixed. On Monday, oil will trade negative; stay sidelined or those who are holding shorts can continue holding and cover some around \$47.50. If oil starts trading below this, then expect \$46.75 to \$44.88 level, cover all shorts at \$44.55 level. Heating oil and RB Gas will trade negative or will follow oil. On the higher side, oil will struggle to remain above \$49.88 level which is the most important astro resistance level.*

Natural gas will trade on both sides without any clear directions so avoid trading but on the lower side one can buy GAS for Tuesday. Don't touch energy stocks as they will keep struggling.

This is what we mentioned on for Friday 2 Sep 2016: *On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue Friday. One can cover 50 to 70% shorts around \$42.61 level in oil and 100% around \$41.78, so one can cover positions in heating oil and RB Gas on Friday.*

This is what we mentioned Monday, the 21st of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on the 27th of August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

This is what we mentioned on the 27th of April 2015: *Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January 2015: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December 2014: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we stated 4 January 2017: *We don't see dollar index going above 103.78 level so watch closely and closing below 102.55 will push dollar toward 101.55 level. Most of currencies gained nice value on Wednesday, emerging market currencies had best day.*

On Thursday, most of currencies will trade both sides, buying is recommended on lower sides in most of currencies so don't miss opportunity.

Buy Pound, Yen, Australian dollar and Canadian dollar. Also buy Franc and Euro without fear.

Astro cycle changed late today on 3rd January so safe buying in all major currencies against USD.

Dollar closing below 102.75 will confirm that it would test the 101.55 level this week.

We are not changing any predictions in currencies of what we mentioned on Monday, 31 October 2016: *Once again tested 99.00 level but then sharply came down from the middle of the trading sessions. We are still recommending to keep building positions in USD around 99.00 level. On Monday, we still recommend buying Euro and other currencies around the lower side, or selling USD around the higher side level. On the down side USD may hold 96.71 level so watch this level closely. Euro can move up to 1.1111 level in this week, so book profit if it goes there.*

On late Monday, the Scorpio Moon will bring both sides volatility. On Wednesday, the FED will announce decisions and due to the Scorpio Moon traders will get confused. Trade light or just trade in and out in currencies but medium term traders can hold selling positions in USD.

Stay short in Yen but one can cover Japanese Yen as it may move towards 0.9525 to 0.9250 level at this stage.

This is what we mentioned Monday on 29 August 2016: *We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below 0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.*

This is what we mentioned last week on Monday, 25 July 2016: This is what we mentioned on Wednesday, the 13th of July: *Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.*

*Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list until it holds this level.*

On Monday, the 11th of April 2016 we stated: *Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.*

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.

This is what we mentioned last Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned on the 22nd of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23rd of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on the 15th of Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
