5 December 2016

Thursday Flash News (unedited copy)

Party continued in Wall-Street but...

Dear Members,

Today I expected corrections coming in market from middle of session but it didn't happened. Market is rallying and holding value very well, most stocks starting taking lead role. We are two weeks away from when **Obama term is ending on 20 January 2017, during his eight years' era bull or buyers enjoyed great time. New era will begin of Trump from 20 January. Financial media are falsely calling current rally as a Trump, they are misguiding common investors, Trump era will start from 20 January so from 20 January whatever happens that we will call Trump cycle.**

Many must be feeling that they are missing buying opportunity because everyone talking about bullish trend but my theory is not advising me to that. Still USA market is hanging around current level without making any major breakthrough.

We are still cautious and Thursday may be testing day for market so buy more puts in Nasdaq and most of Indexes. People are expecting 20000 for DOW, this is just number so don't get trap with this number.

Cotton and coffee moved sharply higher as predicted and stay long. Grains also moved higher, book some profit on higher side but don't short grains.

Sell more energy and energy stocks. Base metals moved sharply higher, but precious metal remained in narrow ranges. Gold is in our selling with base metals.

Most important note for 2017 – **Many think that I am predicting a crash in market, but no, I am not predicting a crash in the market but surely investors will have a painful time from 2017 as markets will not be able to make highs, stocks prices will keep dragging down for years so the most sluggish time is coming for the market. There will be time in 2017 in which market may drop over 20% within no time. Selling and cashing is our advice; my weekly newsletter will guide you on the overall directions and short term traders will get good insight from the daily flashnews.** Those who can't afford to subscribe our services shall get ready to buy our news book **"2017 Financial Predictions"** which shall be out on 15 January.

Obama term is ending on 20 January 2017, during his eight year era bull or buyers enjoyed great time. New era will begin of Trump from 20 January. Financial media are falsely calling current rally as a Trump, they are misguiding common investors, Trump era will start from 20 January so from 20 January whatever happens that we will call Trump cycle.

Here is last week's interview with Kitco on metals and the market trend of 2017:

<http://www.kitco.com/news/video/show/Gold--Silver-Outlook-2017/1454/2016-12-23/The-Stars-Predict-THIS-For-Gold-Silver-in-2017---Mahendra-Sharma>

This week will start with a Scorpio moon which will end on Tuesday during the middle of the trading session. Moon in Scorpio with Saturn over 26 degree in Scorpio always brings some accident and unpleasant news.

Must remember, this is what we mentioned Wednesday: *USA and European markets moving higher every signal day after 8 November, on 19 December first negative cycle started and tomorrow will be first day when we shall see profit booking in market and some serious selling can start in the last two hours of trading. Wednesday shall be first day for market which may test bears force. Emerging markets have been struggling, and may struggle for some time but acquire positions for the longer term.*

Gold moved down but base metals traded higher. Energy prices remained firm. Grains and softs traded negative.

Thirty Year bond traded mix and dollar gained more value.

On Wednesday, we see market coming down in second half of the day.

On higher side gold will struggle to remain above \$1148, S&P 2287, oil \$52.78/\$54.65 and Bond 152 so watch these prices closely. Down side gold is holding \$1125, oil \$49.88, dollar 102.75 and Thirty Year bond 147, these are most important astro points so remember if you holding any positions or if you like to take trade.

Twelfth Cycle: (from book 2016 Financial Predictions page number 34)

From the 18th of November to 31st of December 2016 - This will be a very bullish astro cycle for all the major markets as well. During the previous cycle and this cycle the market can move 15-20% higher so plan your trades accordingly, so that you can gain a maximum benefit out of it. Many call options of \$1000 can be worth \$50,000 in three months. In short, this is the best time cycle to make a great amount of money in the market.

Here is what we mentioned in "2016 Financial Predictions" book on page 59, and page 30.

Tenth Cycle for metal market:, from page 59, book "2016 Financial Predictions"

From the 7th of October to 17th of November 2016 - Once again precious metals prices will fall sharply lower during this cycle so one should book profit before this cycle starts, or close your positions if you are holding any in metals. Sharp corrections in metals futures prices and metals stocks will surprise many because this fall will happen without any major news taking place in the metals market. This is purely a bearish cycle and we recommend short positions in metals.

Eleventh Cycle for US stock market, from page 33, book "2016 Financial Predictions":

From the 7th of October to 17th of November 2016 - This will be the cycle where a turnaround will take place in the market and we see the market recovering very sharply. We won't be surprised at all if the market moves towards an all-time high during this period. This is a great time to buy stocks, indexes or short term call options as most of the sectors will move up aggressively (Biotech, tech, financial, industrial etc.). In short, this will be the most bullish cycle for the market.

Here are the trading strategy and ranges for Thursday:

GOLD/SILVER/BASE METALS

On Wednesday base metals moved higher and precious metals traded in the narrow ranges. Base metals like **copper, palladium, Zinc,, nickel and lead** is about to move south directions big way so stay short or add more.

Gold and silver has limited upside, as mentioned gold will struggle to close above \$1168 and won't be able to close above this level for the three days so watch this prediction closely. Silver will hold value on Thursday.

Time to start buying DUST from Thursday. Thursday sell base and precious metals around higher side levels and add more on Friday as next week looks very bearish for base metal and precious metals.

This is what we mentioned on 28 December: ***One can start selling gold around \$1168 without worrying about fall of dollar as we don't see fall of dollar could help gold in coming as astro cycle is***

negative for gold and that is important indicators not fall of dollar. We don't see gold going above \$1188 or remaining above \$1188 in 2017 so any rise on Friday shall be taken as selling opportunity. Major short term support is at \$1125. Keep adding sell positions in **Silver, copper, copper, zinc, lead, aluminum and nickel, these base metals are trading negative and these base metals will fall sharply lower.**

This is what we mentioned on 14 November: Our view was very negative for precious metals from 1st November. Last week on Friday copper tested \$273 this was expected, and prices reversed sharply from USA sessions and closed around \$250. This was big move in copper. Any rise in copper shall be taken as a selling opportunity. DUST moved from \$31.00 to \$56.00; one can book some profit in DUST around \$61.00.

The maximum higher side for gold could be \$1241 and silver \$17.83. Copper should also be in your selling list around \$253.50 level.

Major astro support for gold will remain at \$1241 level, once gold starts trading below \$1241 then we may see \$1211/1189 level immediately which we are expecting in the first week of December. Gold is under most powerful negative astro combinations which can damage gold prices drastically, we still believe that gold may hit \$775 very soon, may be or before mid-2017. Hold positions in DUST and put options in metals.

This is small note from 3 October: *We are not recommending any buying in silver and platinum as well as metal stocks. Medium and longer term traders must hold shorts in gold, platinum and silver. **Gold trading below or closing below \$1295 will push toward first target \$1256, and silver from \$18.15 to \$16.75 level.** DUST is great buy so don't miss opportunity of buying on Tomorrow. Gold won't go above \$1348 level in any worst-case scenario.*

Remember this what we stated on 22 September: *Most of positive astro time have ended and **small positive astro combinations is there which will going to end on 1 October** and gold will enter in to **100% worst negative cycle from 1 November.** At this stage trade in and out and keep building longer put options in gold and we are sure you will make future in 2017 by remaining bearish in gold.*

*Every analyst on this planet is recommending buying gold except me. **Copper traded positive and stay long in copper, buying copper at \$205 was good call.** Sell more palladium and silver, stay sideline in platinum on Friday.*

*Gold won't cross \$1348 level in coming many years, and down side is unlimited. Wait for 2017 and you will see magic or power of hidden astro waves. **Gold will struggle to move above \$1348 and silver \$20.28;** these are the selling levels in both these precious metals but remain as a day trader for this week.*

Here what we mentioned for last week Wednesday 31 August: *Our view is not changing at all, so great buying opportunity in DUST at \$29.00 level, add some more put options in gold, silver, platinum, palladium and base metals. You can buy Oct put of \$ \$19.75 in silver at \$0.27, and gold \$1340 at \$13.00. We just bought DUST, and add more small put options of October. Mostly we recommend buying put in metals for Feb 2017. **Currently gold is trading \$1354, silver \$20.18, Platinum \$ 1103 and Palladium \$700.** As mentioned gold will have difficult time to hold above \$1348 level (spot price) so watch current value closely.*

This is what we mentioned on 11 August: ***Higher side in gold can rise maximum \$15 from current level of \$1348 and lower side more than \$300 by end of February 2017. Sell more NUGT around \$178 and JNUG around \$320; these levels were the previous highs last month. Add more buying in DUST.***

Thursday's trading range: (March 2017 contract):

GOLD: \$1169.80 to \$1155.20

SILVER: \$16.68 TO \$16.31

COPPER: \$257.90 TO \$252.10

PALLADIUM: \$748.80 TO \$725.00

PLATINUM: \$953.90 TO \$929.50

INDEXES

On Wednesday, most of markets traded mix but USA equity market went higher. Dow is close to 20000 but not break-up that level, it may do it and that will be final day of end of this rally.

Wednesday, we recommended to sell USA and European markets around higher sides but market never came down from higher side which surprised me.

On Thursday, we are still recommending taking some sell positions in European market as most of European markets have achieved top and from here down ward trend will continue any time. Sell DEX, DAX and FTSE.

Next week outlook looks negative for market as well as commodities like metals and energy so everything will start coming down, be aware as negative time is just around the corner. **Maximum higher side in S&P could be 2287 but still S&P will struggle to remain above 2268 for the three days so watch this prediction closely.**

The next two important levels for S&P to watch are 2233 and 2193.

This is what we mentioned 12 December: *FED decision is due tomorrow, we are strongly recommend to book profit or close all long or buying positions around higher sides. We may see S&P testing predicted level of higher and around that prices one can take short positions. Maximum higher side in S&P could be 2287, so start taking March 2017 put options without any fear because market will form top in the next 72 hours. Read this week's weekly newsletter careful.*

We are not changing what we stated Monday, 31 October: *On Monday, we are expecting markets to remain mixed or on both sides; watch 2117 astro level in S&P, we still don't see S&P remaining below 2117 for the next five days but a major astro support level is at 2088 level in the worst-case scenario. If S&P remain above 2117 can push S&P toward 2217, 2237 and maximum 2287, and around 2287 shall be selling level.*

This is what we mentioned Monday 8 August: Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12th February 2016, S&P moved more than 360 points rally which no one expected. Still no one is expecting S&P to hit 2500 by the end of this year and early next year strong rally.

This is what we mentioned on the 29th of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

Thursdays trading ranges: (March 2017)

HONG KONG (cash) – 22255 to 22071

NIKKEI – 19812 TO 19551

NIFTY S&P (Spot) – 8248 TO 8155

Singapore Straits (Spot) – 2915 TO 2892

CAC – 4907 TO 4870

DAX – 11632 TO 11528

DEX EURO STOXX – 3317 – 3283

FTSE – 7151 TO 7098

FTSE/JSE (Cash) – 44251 to 43882

S&P e-mini – 2271.00 TO 2253.00

NASDAQ 100 e-mini – 4951.00 TO 4901.00

RUSSELL e-mini – 1393.25 TO 1378.00

DOW e-mini – 19909 TO 19811

VIX (Cash)- 14.02 to 12.92

TREASURY BOND

On Wednesday Thirty Year Bond traded mix and close in green. Positive trend in bond will continue. Thirty Year will struggle to move above 152-00 level so time to book profit.

Day traders can buy positions around lower sides and book some more profit on rise around the higher side ranges mentioned below.

Stay away from any new buying in TMV, TTT, and TBT, and we are sure you must have closed **100% long positions in TMV, TBT and TTT.**

New trading levels will be 145 to 155 level. The longer term is bearish.

This is what we mentioned 10 September: *Tuesday Thirty Year Bond gained value, and same indicating on Wednesday. Fed may leave rate decision sideline which can push bond toward 168/169. Rate hike may bring prices 162 level. Overall trend is negative so get ready to sell on any rise if FED refuse to hike.*

In the last ten weeks' bond prices came down from 176 to 165 as predicted and our longer-term view is very negative so keep building sell positions on any rise.

By the end of this year we may see 162-25 and 157. Stay long in TTT, TBT and TMV.

Thursday's trading range (March 2017 contract):

TREASURY BOND – 151-16 TO 150-02

SOFT COMMODITIES

Last two trading days have been best for soft traders as predicted. Cotton moved more 3%, and coffee also gained nice value. Sugar also moved higher, we recommend selling sugar around \$20.98 level so get out from 100% buying positions in sugar.

Cotton closed above \$72.00 which is very bullish sign and our next target is \$78.00. Coffee have been gaining as well as predicted, if its closes above \$142 for three days than we may see \$155 level very quickly.

Stay away from cocoa, orange Juice and lumber. Add more selling in orange Juice.

This is what we mentioned on 12 December: *Cotton must trade two more day above \$72.00 level to confirm powerful bullish trend. Buy coffee around \$139 level. Get ready to buy sugar around 18.00 level, best level will be \$17.55. If cotton closes above \$72.00 for two days, then we may see \$78.00 to \$95.00 levels. Stay away from the rest of the softs. Cotton must hold \$68.55 level for bullish market to continue.*

The cocoa short recommendation was the best trade of 2016; price of cocoa crashed from \$3300 to \$2160, cover all short in cocoa.

This is what we mentioned on 4 November: *Coffee traded sharply higher, it has been one of the best call because no one expected coffee to move this aggressively as good crop number and higher inventories. Coffee prices moved from \$120 to \$175 level, our maximum higher side target is \$178 level so now one can book 100% profit. Stay short in orange juice above \$221 and start covering shorts in cocoa around \$2500 and below because it fell 20% from our selling recommendations.*

This is what we mentioned last week Monday, 8 August: *Watch \$143 support level for coffee, coffee must hold this level and on the higher side coffee can move towards the astro resistance level of \$154. We are sure you must have booked profit in most of the softs (cotton at \$75,00, coffee \$154/178, sugar \$19.98/\$22.95, orange juice \$190/210, and cocoa \$3090), and now is the time to stay away.*

This is what we mentioned on the 26th of May: We strongly recommend staying away from any short positions as sugar prices may move towards \$17.65 level and that will be the level to take some short positions with stop-loss of 17.89 and if Sugar start trading above \$17.89 for 26 hours than we may see \$19.98 level.

Coffee prices will hold value on the Down side so one can buy some positions in coffee on Monday. \$128 level will play the resistance level. On the other hand orange juice will move higher but we don't see it moving above 165.00 level so close all positions if you have any in Juice.

Stay short in cocoa and buy coffee as prices will hold \$122 level.

Remember what we mentioned on February 2016 - Coffee will struggle to close above \$118 and \$128. The maximum down side is \$112 or \$109. One can start accumulating coffee with target of \$128. Cotton will struggle to close above \$64.88 and on the down side one can buy around \$57.50. Sugar selling is recommended at \$16.65 buying around \$12.78 to \$12.50 is recommended.

Thursday's trading range: (March 2017 Contract)

COFFEE: \$145.00 TO \$139.05 Buying recommended at \$112.50 and \$118.00

SUGAR: \$21.02 TO \$20.48 First bought at \$12.78 – Now book profit above \$19.98

COTTON: 75.71 TO 72.95 Buy recommended at \$65.00

GRAINS

Most of grains gained value on Wednesday. On Thursday, positive trend will continue but book some profit in soy around higher sides. Bullish era in grain is about to begin so stay long in grains if you are medium and longer term traders.

Stay sideline in soy oil. Corn and wheat can make upside move. No shorts in grains, buying on weakness or around lower side is our advice.

This is what we stated on 14 November: *The down side in and Corn and soy will be limited or these grains will hold \$438, Soy \$955, Soy meal \$303.00, soy oil will hold \$34.00/33.00 and wheat \$393.*

This is what we mentioned 17 October: Monday grains prices moved sharply higher, Soy oil remained in frontline with testing almost 35.50 level which is most important as if soy oil start trading above 35.50 level then it can gain more 30% value in no time so watch soy oil trend closely. Short term traders can book some profit around \$35.55 level in soy oil but don't short soy oil.

Corn, wheat and soy also gained value, stay long in grains as still more three to five percent higher side level is indicating. Tuesday will remain positive days in grains. Corn achieved the predicted short term higher side of \$353 and now corn can reach \$369; one can book some profit around this level.

We already stated that in the worst case scenario soy may test \$943/935, corn \$325 and wheat \$383 on the lower sides. On the higher side we see that Soy can move up to \$1015, corn to \$369, soy meal to \$338 and wheat to \$445.

This is what we mentioned on Thursday 15 September: *Soy will have support at \$935, wheat \$398, and corn \$327. Don't take any aggressive positions in soy oil as it failed to move above \$33.55 level which indicates that it may test 31.10 level.*

Last week on the 9th of June, we stated - *Buying recommendations in soy and meal from November 2015 have done very well. Corn will struggle to move above \$451, Soy \$1211, and Soy meal \$435; these are the levels to sell.*

This is what we mentioned on the 2nd of March 2016: *The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.***

Thursday's trading range (March 2017 contracts):

CORN: \$360.00 TO \$354.25

WHEAT: \$425.00 TO \$411.00

SOY: \$1021.00 TO \$1007.75

SOY MEAL: \$324.00 TO \$316.10

SOY OIL: \$35.55 TO \$34.81

ENERGY

On Wednesday oil, heating oil and RB Gas traded higher, but energy stocks struggled to move higher even though market was trading higher and oil prices were positive.

We still don't see oil remaining or closing above \$54.78 level for the three days, we are still recommending selling oil around higher side on Thursday and Friday as next week looks very negative for oil.

Natural gas closed sharply lower, we recommend to close 50% to 80% short positions on Friday.

We are not recommending any buying in energy stocks, selling is our advice. Oil should test \$49.88 level very soon.

This is what we mentioned yesterday, 2 January: *Oil is failing to move above \$54.78 level so now on the down side we see the \$49.88 level. This will be a selling opportunity on Tuesday in most of energy products. Natural gas failed to remain above \$3.83 which confirms that it will test \$3.57 very quickly.*

This is what we mentioned in our book "2016 financial Predictions" in oil sections:

IMPORTANT NOTE: *As most of you are aware our view for energy has been very negative since June 2014. The overall trend in energy prices will remain negative so we do not recommend adopting long term positions. This means that do not take any trades earlier in the year and continue holding them for the rest of the year, because the higher side in oil will remain limited. There will be better opportunities to make money by trading in and out. Heating oil and RB gas will follow oils trend, so during this year we may see oil moving towards \$48.50 or \$52.95, and on the down side it may hold \$34.55. If it closes below \$35.55 for three days then there are chances that oil prices could fall towards \$29.65. Traders should take advantage of buying short term call options before any of the above-mentioned cycles start, and also book profit quickly before the positive cycles end.*

Energy stocks will trade mixed without any major movement, so longer term investors should not be putting any money in energy stocks. Any sharp rise should be taken as a profit booking opportunity if you are holding any energy stocks.

Natural Gas' trend will remain positive during 2016, so one can stay long in Natural Gas in the year 2016. However, it is very important to remember to keep booking profit before any of the above mentioned negative cycles start. Overall, Natural Gas will outperform oil in the year 2016.

For short term strategies and price targets please follow our weekly and daily newsletters.

Ninth Cycle:

From the 26th of November to 31st of December 2016 - During this cycle we see positive momentum coming back in the energy market and oil prices will form a bottom, and oil stocks will also act positively. Even though this is a positive cycle, the higher side will remain limited. Natural gas and RB gas will move sharply higher during this period.

Energy trading ranges for 2016:

Crude Oil: \$52.95 to \$29.78 (As predicted last year that oil may hold \$30.00 level and if its trade below for five days then possibility that could test 2002 low of \$27.78 level)

Natural Gas: \$2.88 to \$1.82 (higher side \$3.57 if it cross \$2.88)

Look at accuracy level about oil what we predicted in the book.

This is what we stated Monday, 31 Oct: *Friday oil, heating oil and RB Gas traded negative as predicted. Energy stocks also went down but gas traded mixed. On Monday, oil will trade negative; stay sidelined or those who are holding shorts can continue holding and cover some around \$47.50. If oil starts trading below this, then expect \$46.75 to \$44.88 level, cover all shorts at \$44.55 level. Heating oil and RB Gas will trade negative or will follow oil. On the higher side, oil will struggle to remain above \$49.88 level which is the most important astro resistance level.*

Natural gas will trade on both sides without any clear directions so avoid trading but on the lower side one can buy GAS for Tuesday. Don't touch energy stocks as they will keep struggling.

This is what we mentioned on for Friday 2 Sep: On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue Friday. One can cover 50 to 70% shorts around \$42.61 level in oil and 100% around \$41.78, so one can cover positions in heating oil and RB Gas on Friday.

This is what we mentioned 1 August 2016: Selling oil at \$98.00, covering all shorts at \$44.55 and \$27.71 were best call of last two years in oil. Early this year buying back at \$27.71 with higher side target \$48.88 level. Last month we recommended shorting oil around \$48.88 to \$49.88 levels with target of \$39.88 which got achieved today.

On Monday oil, heating oil and RB Gas traded sharply lower. Energy stocks also lost big value, as predicted wait for ERX to test 25.00 level before you take any actions in energy stocks so avoid any buying in energy stocks.

Trading in and out is recommended in gas on daily basis, those who like to take sell should wait for another 10% move on higher side in gas, and keep buying on lower side if prices reaches to \$2.63 level.

Lower side we see oil moving toward \$39.88, watch this level closely, we don't see oil breaking below \$36.55 level in the pending months of 2016. Expect ERX to reach the \$25.00 level and watch if it holds than start buy some positions.

Mentioned last month: Overall oil won't be able to cross the \$48.88 level and on the down side it may break the \$40.00 level, but cover all shorts around the \$39.88 levels.

We are not changing any of the predictions we mentioned on the 3rd of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it must close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some

selling is recommended around \$48.88 level and on the down side the important level to buy is at \$44.55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2nd of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

A few past important predictions and levels for energy of the daily Flashnews are at the end of this letter.

Thursday's trading range (February 2017 contracts):

OIL: \$54.25 to \$52.35

NATURAL GAS: \$3.35 to \$3.20

HEATING OIL: \$1.7201 TO 1.6603

RB GAS: \$1.6675 TO \$1.6095

CURRENCIES

Dollar Index failed to move higher as predicted, dollar is topping out. We don't see dollar index going above 103.78 level so watch closely and closing below 102.55 will push dollar toward 101.55 level. Most of currencies gained nice value on Wednesday, emerging market currencies had best day.

On Thursday most of currencies will trade both sides, buying is recommended on lower sides in most of currencies so don't miss opportunity.

Buy Pound, Yen, Australian dollar and Canadian dollar. Also buy Franc and Euro without fear.

Astro cycle changed late today on 3rd January so safe buying in all major currencies against USD.

Dollar closing below 102.75 will confirm that it would test the 101.55 level this week.

We are not changing any predictions in currencies of what we mentioned on Monday, 31 October: *Once again tested 99.00 level but then sharply came down from the middle of the trading sessions. We are still recommending to keep building positions in USD around 99.00 level. On Monday, we still recommend buying Euro and other currencies around the lower side, or selling USD around the higher side level. On the down side USD may hold 96.71 level so watch this level closely. Euro can move up to 1.1111 level in this week, so book profit if it goes there.*

On late Monday, the Scorpio Moon will bring both sides volatility. On Wednesday, the FED will announce decisions and due to the Scorpio Moon traders will get confused. Trade light or just trade in and out in currencies but medium term traders can hold selling positions in USD.

Stay short in Yen but one can cover Japanese Yen as it may move towards 0.9525 to 0.9250 level at this stage.

This is what we mentioned Monday on 29 August: *We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below 0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.*

This is what we mentioned last week on Monday, 25 July: This is what we mentioned on Wednesday, the 13th of July: *Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.*

*Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list until it holds this level.*

On Monday, the 11th of April we stated: *Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.*

Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.

Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.

A few of the past important predictions and levels for currencies of the daily Flashnews are at the end of this letter.

Thursday's trading range: **(March futures)**

DOLLAR INDEX – 103.01 to 102.38

AUSTRALIAN DOLLAR – 0.7318 to 0.7228

CANADIAN DOLLAR – 0.7551 to 0.7481

BRITISH POUND – 1.2401 to 1.2263

EURO – 1.0565 to 1.0461

JAPANESE YEN – 0.8591 to 0.8488

SWISS FRANC – 0.9888 to 0.9755

RUPEE – 68.00 to 67.68 (Spot)

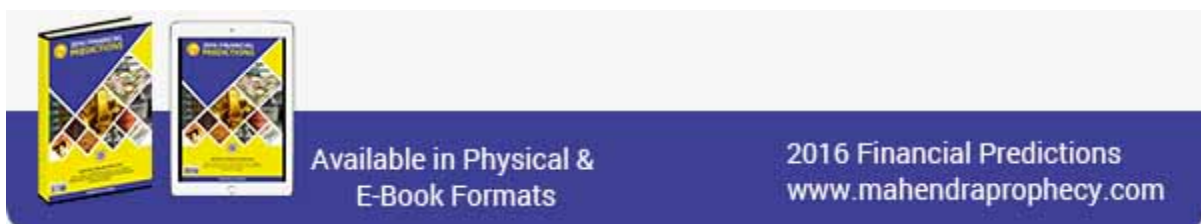

RAND – 13.68 to 13.51 (Spot)

London 23:16	Rio de Janeiro 19:16	New York 18:16	Los Angeles 15:16	Sydney 8:16
Tokyo 7:16	Shanghai 6:16	Bangkok 5:16	New Delhi 4:46	Dubai 2:16

Thanks & God Bless, Mahendra Sharma

2016 Financial Predictions
www.mahendraprophecy.com

Some past important notes and important ranges from our daily flashnews:

From few past Flashnews - important commentary:

This is what we mentioned on the 18th of Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that*

S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.

Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and

making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.

After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.

There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21st of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.

Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts.

INDEXES:

This is what we mentioned on Tuesday, the 25th of January: Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.

All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.

Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.

On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.

If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.

This is what we mentioned the 18th of Jan 2016: On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26th of February 2009. We recommended that the market would bottom out on the 6th of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.

Energy:

This is what we mentioned Monday, the 21st of December 2015: Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.

In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.

Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.

This is what we mentioned on the 27th of August 2015: If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.

We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.

This is what we mentioned on the 27th of April 2015: *Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5th of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5th of December 2014: ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Currencies:

This is what we mentioned last Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.

Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.

This is what we mentioned on the 22nd of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23rd of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.

Remember this what we mentioned on the 5th of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned on the 15th of Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
