Friday's Flash news (unedited copy)

Shanghai will hit 5700 to 6100 before it corrects

Dear Members,

On Thursday most of market gained value but Indian and Brazilian market lost value. We are strongly recommend holding positions in most of all markets and one can keep adding positions in both these emerging market. Weakness in Indian and Brazilian market is purely due to sharp rise in Chinese stocks which putting huge pressure on both these merging market due to fund sifting.

S&P closed above 2088 in the second day in row which is clearly indicating that bullish pattern is taking shape in market. On Friday USA market will trade mix to positive and same kind of trend will remain for most of global markets. Trading in and out as per mentioned below ranges of Friday

Last week two most important stocks we provided and this week so far they acted very well. They were **RAD and CY**, both these stocks are in top longer term holding list. You can also buy call options of these both stocks of 2017 Jan. Rite Aid is Corp is very close 13 year high

and we are sure it will move above that. Current rally can take this stock to \$14.00 by the end of this year or early next year so investors must hold this stock in their portfolio. Jupiter Changing house in the first week of July 2015 will bring wind fall to investors of RAD so our first stock is RAD from our new 20 stocks buying list. In the next 27 months this one can even move toward \$30.00.

RAD made \$51.10 on 4 Jan 1999 and \$0.20 low on 2 March 2009. RAD gained 4500% from in the last six years. Only those who has visions and patience makes fortune if they take timely decisions in market. On 26 February 2009 when we gave interview with Jack of CNBC, we predicted that market would bottom out by 6 of March 2009 and DOW would hit 32000. We call that it is best time in history to add money in market.

USA is currently entering into most powerful economic cycle and dollar bullish pattern. One hand emerging market and other countries are cutting rates while USA is looking ahead of increasing rate rise. It is most interesting time because fundamental are supporting rate rise and FED is convinced. Media may make noise which is their job but we recommend investors to take rate is in very positive way if you like to make money because DOW will hot 32000.

Shanghai market is trading higher but YINN and ASHR is struggling which is not great sign so avoid any new buying in YINN. Our buying recommendations have done very well in YINN in the last one year as it went from \$23.00 to \$70.00. We recommended booking profit at \$64.00 and we are not recommending any new buying in Chinese etfs. **INDL and BRZU** is great buy at this stage for medium and longer term betting.

This is what we mentioned yesterday: *On Wednesday most of global market as well as USA market gained handsome value and it looks like that fear have gone from market. Important event was that S&P closed above 2088 which is very bullish indications for USA equity market.*

Get ready for Rate rise in the month of July. Thursday positive trend will continue for markets so hold positions in most of global markets and add more positions on any weakness.

Tech and financial are leading, these both sector will take this market to new higher in the coming time. Buying Financial have proven great call of 2015 so far and we believe that financial will keep moving higher in 2016/17.

USA market will have once again hurdle at 2118 but we are optimistic because we are just not very far away from most power cycle to begin. Most Index leader stocks will start taking lead from here so one should start doing research that stocks they want to hold or buy in S&P, NASDAQ and DOW, if S&P goes to 3200 or down goes to 32000. These target won't achieve without Index leaders move higher.

Rate rise is coming and fear of this may put some pressure on emerging markets as previously mentioned that many emerging market countries are cutting rate and on other

hand USA is ready for rate rise, keep accumulating **INDL, GREK and BRZU** for medium and longer term.

Financial are doing and they will keep doing well, don't short market. Sell more commodities etfs and commodity stocks.

Book some profit TNT, TTT and TBT as we see Thirty year holding 147.00 level.

One can start adding call options in S&P and NASDAQ of December 2015.

I am about to list 20 new stocks in longer term buying so get ready for Friday. Put equal amount in each stock and we are sure your money will be minimum double in the next 18 months.

This is what we mentioned on two weeks back on Friday: *This is what we mentioned yesterday and we don't want to change any recommendations at this stage: Today one again we recommend buying these name for the longer term so here we are putting cyber security stocks list: **PANW, CYBR, FEYE, PFPT, VDSI, QLYS, FTNT, IMPV, CUDE, LOCK, BLOX, CHKP, ZIXI, PYDS, and SYMP.** Those who just like to buy etf of security then they can invest in **HACK.***

*We own **FEYE, CYBR and BLOX.** I use to own **FTNT, VDSI and QLYS** but book profit due to sharp rise and now thinking of buying these stocks back which I sold. In the two year time Saturn and North Node can push cyber security stocks sharply higher. I we also see bubble and burst situations in these stocks in the next two years. Cyber security stocks may remind us tech bubble of 1998-2000 so great time to invest in these stocks to make great amount of profit in the next two years.*

We are planning to add position in **CHKP for the longer term, also **CYBR, BLOX and FEYE** will remain in our longer term buying positions.**

I am doing extensive astro research on these companies and will try to put detail report on coming Monday's letter so wait for that. It looks like that cyber security stocks will be on top in our pick from here onward.

*Please read once again our yesterday's recommendations as few of trade can make you great amount of money in coming time. Especially metal shorts because if gold fall 100 or 200 buck from here then **GLL, DSLV and DUST** will go crazily higher as they are bear etfs.*

This is what we mentioned on the last week Tuesday: **Commodity related stocks like energy and metals will trade negative. Hold short positions in recommended energy stocks.**

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
