## Thursday's Daily Stock Investment Report (unedited)

### MSFT and AMZN are our favorite on earning, both these stocks should move 7% to 18% higher

Dear Members,

On Wednesday market traded negative, the story of **Valeant Pharmaceutical (VRX)** created fear amidst biotech investors. VRX kept acquiring biotech companies rather than investing in R&D and kept increasing drug prices which is now under investigation. **Ackman** is the third largest holder of VRX (holding 5.7% as per last update) and investors of **Ackman fund "Pershing Square Capital"** must be very uneasy at this stage because Bill Ackmans short bet on **Herbalife and Valeant** haven't done well. After shorting **Herbalife** he kept fighting to prove that the **Herbalife** business model is a pyramid scheme and stocks don't hold value. He wasted a long time to prove his cash and convincing people that his short bet on Herbalife is the right one. Herbalife battle become very popular because it was between **Bill Ackman** who was short and **Carl Icahn** who was long in Herbalife and surely Carl Icahn was winner of this fight. Look at chart of both these stocks.

You must be remembering that two years back I analyzed the astro chart of Ackman and my view was very negative for him as his astro chart had already turned negative since 2013 and we mentioned that he will keep losing money and respect and so far we can say that he has been pulling the trigger on the wrong sides and pursuing efforts to achieve quick gain rather than working like intelligent fund managers such as Carl Icahn or Warren Buffet. Our advice is to stay away from

Ackmans ideas as the worst time cycle for him is on the way. According to his astro chart he may lose a lot of money for his investors.

On the other hand Carl Icahn, Apple, AMZN and MSFT astro charts look amazing so stay invested and we are sure you will earn great returns in the coming time. Yesterday we analyzed this week's stocks earning report card and if you are not a subscriber of stock report than you must subscribe because we put out a daily report on which stocks will perform well after earning.

On Wednesday market traded mixed to negative as expected, base metals and precious metals lost big value. Metal stocks also lost value. On the other hand grains gained value, our buying recommendations in soy products did well on Wednesday and softs traded mix. Thirty year bond gained value on the short term rate dropping. Frontline currencies traded mixed but commodity currencies and emerging market currencies lost value.

Thursday will be very positive day for market and time to take some serious bet on any weakness.

Today CMG went lower as expected, after market TXN announced earning and it gained almost 8%. Thursday we will testing time and we are very much positive because astro chart is positive for AMZN, MSFT and also Google. Hold positions in in all these three stocks, don't bet aggressive on Google but AMZN and MSFT are in our most favorite list for short, medium and longer term.

On Wednesday markets traded negative as predicted. On Thursday one can start buying positions in indexes, and stocks as market may rally big in the next two trading sessions. Today S&P held value of 2008 which we mentioned yesterday, and higher side S&P may move two percent from current level, NASDAQ will also follow and move aggressively.

European, Asian and emerging market will also move higher from late Thursday and shall move sharply higher on Friday.

This is what we mentioned yesterday about AMZN, MSFT, Google and other few stocks. Yesterday we also recommended FDX, it performed very well on Wednesday. Here what we mentioned yesterday: *On Monday we mentioned that one should start buying YINN, BRZU, LBJ and INDL from Thursday, and tomorrow is Thursday so get in without waiting.*

*Last quarter (June 2015) **AMZN** and Google recommendations provided huge returns to investors. We predicted that both these stocks will move at least \$90.00 after earning release. This time our two favorite recommendations are **MSFT and AMZN**. Today Amazon is trading around \$559 and MSFT \$47.65.*

*According to astro chart, **AMZN (Amazon – currently trading at \$559)** look positive as most of planets are in gain house so company will provided great number. We are expecting Amazon to move at least \$65.00 or 12% higher from today's price of \$559. Buy some short term call but most of you are aware that our target for Amazon is 1000 by end of next year so keep adding longer term call option like Jan 2017 with strike price of \$700 and we are sure you will gain great returns.*

*Second best stock is **MSFT (Microsoft – currently trading at \$47.59)**, we are strongly recommend to buy MSFT on earning. Buy 18% in short term call and 82% in longer term call of 2017. Our view is very bullish for Microsoft as Astro cycle will turn very positive in 2016 and 2017. Down side for Microsoft is very limited but higher side is unlimited, at least it can reach \$68 by end of next year. Thursday it will announce earning after market close and we are expecting at least 9% move in stock which huge for this size company.*

**GOOGL (Alphabet)**, also will announce earning on Thursday along with MSFT and AMZN. Google will also perform but it will perform both side so any sharp higher opening should be taken as profit booking. We also recommend buying Google on earning. Currently Google is trading around \$678.

On Thursday **POOL** will be also announcing earning, this one can also move up to 10% higher so one can take positions in **POOL** on Wednesday. Currently POOL is trading around \$75.00

We are sure you will do well with all these recommendations.

**CERN (Cerner Corp)** will be announcing earning on 27 October, and we strongly recommend to buy at \$65.60, we are expecting at least 10% move in **CERN**.

Last week **UFPI** performed well after earning, it moved over 15% after earning and we are still recommending to holding **UFPI**.

On Tuesday most of markets traded mix to bit negative as predicted and same kind of trend will continue on Wednesday. In our weekly newsletter we predicted Tuesday and Wednesday market to trade mix to bit negative.

We are strongly recommend start buying positions on lower sides so don't miss opportunity of buying.

Yesterday we recommended buying **HSTM**, stock moved over 10% and we are still recommend holding positions in it.

Today after market **Yahoo and CMG** announce earning and both stocks were down bit, we didn't recommended as astro chart were not clear for both these stocks.

This is what we mentioned on Monday: **HSTM** announced earning after market, looks like that stock **MSFT, GOOGLE, and AMZN** will be announcing earning on Thursday so surely it will be most interesting day.

Stay away from buying in energy, metals and biotech stocks but surely tech and industrial stocks.

Add some aggressive positions on Thursday in following etf's ETF's BRZU, LBJ, INDL, YINN and ASHR.

On Tuesday VZ, YHOO, YELP, NXPI, SKX, ISRG, ILMN, RUBI & CMG will announce earning.

Our favorite is **RUBI (best buy for Tuesday)** this will move at least 10 to 15%.

**ISRG and SKX** will hold value. **VZ** should be bought.

**CMG and ILMN** should be sold on any rise.

On Wednesday **CERN and TVL** will announce earning we like both these stocks. We recommend buying both these stocks, may provide you nice returns on during this week.

Apart from earning we like **FDX**, one can buy **FDX** for short term gain.

Last week **IPHI, AAOI, AMZN and MSFT** performed well, IPHI is our favorite in mid-size stock. Last week **IPHI** moved sharply higher. On 27 October IPHI will announce earning, we are expecting IPHI to move at least 50% higher from current price. Also two more our favorite are **LGIH and NHTC**.

HI, AAOI, AMZN and Google moved sharply higher, must hold positions in these stocks. On Monday IBM will announce results on Monday before opening and in the last nine quarter earning stock always went down but this time story will be different, we recommend buying IBM but not short term call, buy March 2016 call and down side maximum risk is 5% and higher side you will make 25 to 30% in the next five months.

We don't see S&P going below 1988 now and higher side S&P will face small resistance at 2042 so short term traders can book small profit there.

DUST, YINN and BRZU will be great bet. Wait for Monday's report as we will put stock list for next week's earning buying.

**POOL (\$75.70)** – This stock can move up sharply after earning on Wednesday so buy and book profit on rise.

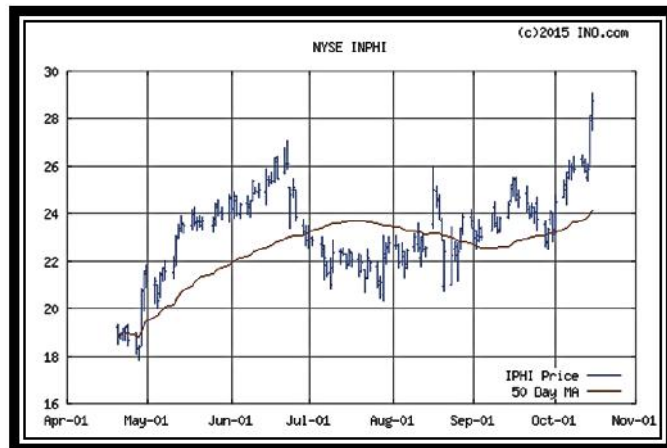

**UFPI (\$63.00)** – We like UFPI, company will announce earning on Wednesday, buy this one as well.

Here what we recommended on 8 October: *We are adding one more stock in our our housing related stock and that is BSET, it closed more than 4% higher today at \$31.90. One can buy this one in your portfolio.*

*It is getting clear that stocks like Cisco, Microsoft, Amazon, Google, IPHI and many tech companies are getting ready for historic rise. Tech stocks and LEN, TOL, LGIH, HD, RH, LOW, SHW, BLDR, FAST and CNCO.*

*We are preparing list of stocks to buy on earning from next week so get ready to pick some favorite stocks which may surprise Wall-Street and these stocks will rally after earning. AAOI and IPHI are our favourite stock.*

*We are not changing any recommendations of what we mentioned yesterday: Stocks like Google, Amazon, CSCO, Microsoft, IBM IPHI, AAOI, and Netflix are moving aggressively higher and these stocks will take the USA market to a record high. Each and every member*

**must have positions in these stocks if you are not holding positions in them right now.** On the other hand emerging market ETF's are also moving in a sharply upwards direction. Energy ETF's like **GASL and ERX** moved almost over 35% in the last three to four trading sessions. Housing, tech, home builder and home improvement sectors are also performing very well and we recommend just focusing on these sectors at this stage.

Last month we recommended buying **HLTH, LGIH, EFOI, NHTC and THRX** and they are performing well. **NHTC, HLTH and LGIH** are our favorite stocks so don't miss the buying opportunity even at this level. These three stocks will move in multi folds. Also keep a close watch on **FMCC and FMNA**.

Watch 1988 level closely as at this stage S&P will have difficulty to cross this level and has to close three days above this level to give clear indications of new buying with target pf 2073 level in short term. Down side S&P will hold 1944 levels.

No new buying is recommended in biotech at this stage, lets market get change in early November so until then stay side line.

On Friday 2 Oct, this we mentioned in alert: *On Friday we stated: Job data unexpectedly came out negative and market came down sharply lower but these lower prices may not able to remain for more than few hours or few days so time to acquire more positions here in USA market. This week on Monday S&P made a low of 1863 level and right now it is trading at 1886 and this level should be held and it won't trade below 1886 for more than three days.*

*Must watch: Emerging markets are bottoming and emerging market currencies also started moving higher since last three trading sessions after weaker news of five years. Time to acquire emerging market currencies and emerging markets. Watch YINN, BRZU, INDL and LBJ.*

*In 2011 mid-October S&P bottomed out and moved 30% in the 5 months, and every year there on S&P always bottomed out in mid-October and same we are expecting this year to happen as we have been predicting that market should bottomed out by **10 or 16 October 2015. We are still expecting huge rally in first quarter of 2016. We are expecting S&P to gain 20% by 2016 March.***

*Thanks & God Bless, Mahendra Sharma, 7.00 AM Santa Barbara, 2 Oct 2015*

This is what we stated last Thursday: *On Thursday we strongly recommend buying energy stocks, and energy etfs. Tech and biotech stocks will keep recovering from recent fall. ERX is great bet today. It moved higher yesterday from our buying level of \$24.00. One can buy **TOT, PTR, BTU, NOV and OXY**, these energy stocks are for short term buying.*

*For S&P 1928 will remain a crucial level and S&P has to close above 1928 for two days to give a clear buying indication. We are expecting the market to move aggressively higher any time after the 15<sup>th</sup> of October, which can force the market to close 15% higher from current levels.*

This is what we mentioned Monday: **We doesn't see S&P closing below 1923 for three days otherwise until 10 October market can remain weaker or volatile so watch this astro level closely. We recommend you to read this week's weekly newsletter carefully.**

Short term for Monday: Tech stocks are ready to below upside, it is one of the best time to acquire positions in stocks. **MSFT, AMZN and on other hand V, COSTCO, WMT, HD and XOM** can provide great returns during this week. WALMART and MICROSOFT are most favorite, Walmart lost more than 20% value, buy this week call options of expiry of next week, buy 64.00 call and we are sure you double your money within the few days.

**Reading daily range:** When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
