Friday's trading range for Stocks & Indexes (Unedited copy)

Dear Members,

Thursday equity markets went sharply high as predicted and commodity traded mix. Our recommended favorite stocks of this week FNMA, FMCC, JCP, S, FCEL, BLDP, PLUG, TSLA, and HZNP done very well. I would like to put few of our favorite stocks charts of this week:

Unfortunately I have less time for Astro research for stocks, but whatever stocks we recommended done amazingly well in the last one year (stocks like FNMA and FMCC went up 2000%, PLUG 1000% and most of other went up between 100 to 500%). I feel fortunate that I learnt Astro subject from my maternal Grandfather.

On Thursday finally S&P was able to close around 1854 (most important Astro level) and we have been mentioning this figure since last five month. We predicted that January and February S&P may remain around 1854 and one day is pending in the month of February S&P is at 1854. Now it will be interesting to watch from here onward because if S&P close two days above this level then markets may move up sharply in coming days. Read our next week newsletter carefully.

We are not changing any major predictions for Friday so hold positions in our recommended stocks and add more FCEL, This is what we mentioned yesterday: *Wednesday mining stocks came down sharply as expected but on other hand housing and alternative energy stocks performed very well. Our most favorite FNMA, FMCC, FCEL, PLUG, BLDP, HYGS performed very well. Our Astro indicators still showing positive wave so don't short stocks or Indexes at any level as market just much more power to move higher. Still tech and biotech stocks are in positive cycle to hold investment in these stocks.*

We don't follow technical nor we hear noises from crowd, we silently follow wave of nature which is plus or life of market from Astro theory. Yesterday we mentioned that technical won't able to give us overall picture for medium and longer term because they will keep changing on every move but Astro cycle fill this positions.

Anyway still 1854 looks solid wall for S&P but surely this wall will be demolish soon in the next few days. On downside 1833 has string Astro support so buy on any weakness below 1839. Emerging markets traded positive as predicted and we strongly recommend holding positions in these markets.

JC Penny, Sprint, FCEL, FMCC, and FNMA buying recommendations done very well in the last three trading sessions and we still recommend holding positions in all these stocks and another 30% move can come very easily. Our target of FCEL is \$5.00 in the next six months.

This is what we mentioned on Tuesday: Trading in and out should be trading strategy until S&P doesn't close above 1854 for two days. Asian and European markets will trade mix to positive. Don't short market at this stage, surely one can take hedging trade. Commodities looks negative so take selling in commodities.

Our buying recommendations in FNMA and FMCC done very well in the last three trading days and we still recommend holding positions in both of this stocks for medium and longer term. Now time to take longer term positions JCP, S, FCEL, ISRG, and RAD.

Tesla remained one of the best buying call in the last two years. We strongly recommended buying Tesla at \$30 and we predicted it could reach \$280. Hardly anyone wanted to buy this predictions but those who bought made fortune.

This is what we recommended on Monday and holding same recommendations: **Here are three new buying recommendations (INDY \$22.70) Indian etf, (FXP \$68.00) Buy Chinese ultra-short and buy Brazil ultra-short (URB 37.00). These are short, medium and longer term trades.**

During this week, we see a mixed trend in the equity market. Watch the 1854 level very closely for S&P because if S&P trades above this level for two days, then we may see \$1900 soon. I would like to watch the time cycle from the 28th of February to the 3rd of March 2014, because Mars will be retrograding and may bring some volatility.

Some exposure should be taken in commodities as we see some weaknesses coming in UGAZ (natural gas), DUST (metal stocks) and GLL (gold). Coffee etf "JO" has done amazing well; one should book profit.

These stocks have done well as predicted during last week, so now is the time to book profits. **ANIP, ACT, DXCM, PCRX, FMCC and FNMA.** Hold positions in **FCEL, FMCC and FNMA**, in fact, one can keep adding these three stocks on weaknesses.

Housing stocks are our favorite, so hold positions in housing stocks and housing ETF (DRN – bull market), and one can hold shorts in bear etf (DRV).

Here are our favorite housing stocks: KBH, TOL, PHM, ARL, TREE, MHO, VTR, MTG, FNMA and FMCC. Buy these stocks for the medium and longer term.

Daily Trading ranges for Friday (Indexes range are March future contracts):

S&P – 1863.00 TO 1845.00

NASDAQ – 3727.50 TO 3680.25

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
