Thursday's Flash news (unedited copy)

Astro indicators are turning very negative on precious metals

Dear Members,

On Wednesday markets bounced back strongly but commodities traded sharply lower. Currencies gained value and Thirty year bond lost more two points. Predictions of fall of in Thirty year prices turned out best short term predictions of last two months. Most of those who invested in this trade must have done very well. Last year fall in energy and rise of USD were two best call provided by astro cycles.

Yesterday we warned on weakness in Metals and energy, and we are still recommending staying away from metals. Keep your love and emotions away as buying metals can turn out worst decisions.

Indian market traded negative among international market, traders are worried about drought which can hit growth and may bring big inflations problem in country.

Thursday stocks will gain more value, everyone is watching Greece, EU and IMF outcome. Commodities will trade mix but metals are in our short list. Oil and other energy product will trade mix and USD will gain value as most of currencies will start losing value from mid trading sessions on Thursday.

This is what we mentioned yesterday: *Scorpio Moon on will bring some volatility and Tuesday and Wednesday in commodities, currencies and bond prices. Stocks prices might not get effected due to positive Saturn running form Scorpio house.*

Support or resistance level in S&P at 2118 will remain very crucial. On the other hand gold is doing its best to hold \$1180 level but let's see how many more days it can hold this level because the astro signs are not very encouraging and Dollar index is ready for a three digit mark one more time so let's see if it hits it in the next two weeks.

This is what we mentioned two weeks back on Wednesday (20 May): *Gold have been trading in range of \$1225 to \$1142 since one year after coming down from high of \$1900 in 2011 which we predicted and since then we have been not recommending investing any money in metals and metal stocks. We are planning to recommend buying metals later this years which we already mentioned last year in Kitco interview and our website.*

For medium and longer term traders trading range: Major support on down side will remain at \$1180 and \$1142, on higher side \$1225. Breaking either side will confirm end bear of bullish trend.

Oil is trading positive and energy stocks are trading mix to negative as predicted. We still believe that oil will have touch time to cross \$63.88 as predicted.

Cut or cover all shorts in grains and softs as tomorrow is our final day for ending bear trend in grains and softs.

USD have started trading negative as expected but great selling trade is indicating in Australian dollar, Euro and Franc from Tomorrow, one can take some put options in these currencies.

Indexes are trading mix, we see strong momentum coming back so hold positions.

Thirty year bond trading as predicted, but short term traders should close positions in TMT, TBT, and TTT. Also close positions in put options in futures markets.

This is what we mentioned on the 22nd of January and are holding the same predictions: *Stocks are trading mixed as some stocks are rising sharply and many are falling. We strongly recommend holding positions in the market as well as our recommended stocks until S&P holds 1982. S&P shouldn't close down below 1982 for more than two days. USA market is volatile but at the same time it has been consolidating around 2000. Tech stocks are performing very well. Precious metals and energy bounced back from lower levels on Monday. Oil held \$44.55 level very well. Grains and soft commodities struggled as predicted.*

So far S&P is holding 1982, oil \$44.55 (these are buying levels) and gold has not been able to hold above \$1307, also watch 172 (these are selling level) level for Thirty year.

Here are the trading ranges and strategies for Thursday:

METALS

On Wednesday gold, silver and other metals traded negative as predicted. Gold once again touched \$1180 and finally it looks like that gold may break this level very aggressively without and hurdle in the next 48 hours.

This week we constantly recommended to building up sell positions on higher side or around \$11195 to \$1205 and we recommend selling gold, silver and base metals on higher side on Thursday.

Metal stocks are trading and will struggle. Hold positions in GLL, DSLV and DUST.

This is what we mentioned yesterday: *Today put options of September 2015 strike price \$1140 was trading at \$12.70 which should be great buy as our astro indicators are turning day by negative. Astro indicators have been in negative astro cycle since last three years and currently we are entering into final cycle of weakness in which emotions and love toward gold will be tested.*

We recommend staying away from gold, silver, base metals and metal stocks from Wednesday. Selling is recommended on higher side on Wednesday. This is what we mentioned Tuesday: Monday gold and silver traded both sides as expected. Gold basically got stuck in the range of \$1205 to \$1180 and every week it has been moving on both sides aggressively and many short term traders have been taking great advantage of trading.

*It has been three frustrating years for metal investors and still this unstable time is not over yet. Tuesday both side move will come but selling is recommended or trade in the predicted ranges. **Don't hold any positions if its break \$1180 and trade for five hours below this level.***

DUST, GLL, DSLV gained sharply after losing value in morning hours.

This is what we mentioned on last Wednesday (20 May): *Tuesday metals traded negative as predicted. On Wednesday weakness in metals will continue, precious and base metals should come down from higher levels. Gold fail to close above \$1225 which most negative sign and how it closed at \$1205 which is most important support level. Gold and two small support at \$1193 and \$1180 so short term traders can cover positions around this levels.*

DUST, GLL and DSLV move sharply higher, and we strongly recommend holding positions in all these etfs.

We are still recommending selling around the higher sides or buying put options of August.

This is what we mentioned on the 1st of September 2014: ***Gold breached \$1283 level which clearly indicating that is moving toward \$1248 to \$1153 and silver \$17.57 to 14.87 level soon. Metal stocks will also suffer setback.***

Here is Thursday's range: **(June/July 2015 contract)**:

GOLD: \$1191.90 to \$1177.00

SILVER: \$16.65 TO \$16.30

COPPER: \$275.00 TO \$270.00

PALLADIUM: \$765.00 TO \$750.00

PLATINUM: \$1110.00 TO \$1093.90

INDEXES

On Wednesday market opened sharply higher without any major news but surely news from Europe was positive and now everyone is waiting for Greece. We are strongly recommend holding positions in recommended stocks and markets. We still believe that emerging markets will move higher so hold positions.

S&P is hanging around 2118 but now it looks like that S&P may blow upside in the next two weeks so hold positions tightly and buy short term call options which may makes you money in multifold.

This is what we mentioned yesterday: *USA market traded marginally lower, most of other global market also traded directionless expect Brazil. Indian market lost big value due to many forecasted weaker monsoon season.*

On Wednesday one can trade in and out but USA traders can carry positions in market as Thursday and Friday we may see market moving higher. Buy aggressive positions in market only if S&P close above 2118, down side support. At this stage trading in and out will remain best strategy.

Keep adding GREK, BRZU and INDL.

If S&P closes above 2118 then it will be the most exciting news for traders because we still believe that S&P can easily touch 2157 to 2178 within the next two weeks. Down side S&P will hold 2095/2088 level so around this level one can buy.

This is what we mentioned on the 12th of December: ***S&P broke the most important level of 2014 after breaking \$2033 and now 1988 and 1980 will be great buying opportunities as our astro indicators are not showing any weakness below 1980 so one can start buying on any weakness in stocks and indexes on Monday.***

Here are Thursdays' ranges: **(June contracts)**

HONG KONG (cash) – 27730 to 27420

NIKKEI – 20695 TO 20430

NIFTY S&P (Spot) – 8230 to 8081 Buy

CAC – 5070 TO 4980

DAX – 11530 TO 11320

DEX EURO STOXX – 3620 – 3551

FTSE – 6998 TO 6915

FTSE/JSE (Cash) – 46129 to 45789

S&P e-mini – 2125.75 TO 2109.50 Buy

NASDAQ 100 e-mini – 4550.50 TO 4510.25 Buy

RUSSELL e-mini – 1271.50 TO 1256.00 Buy

DOW e-mini – 18170 TO 18055 Buy

TREASURY BOND

On Wednesday Thirty year bond lost more value, June contract came down to 151 so it lost almost 21 points from 172. Our predictions of Thirty year bond topping out proven best call and we also mentioned that fortune could be made and we sure many of you must have done amazingly well in this trade in the last three months.

We are not changing any predictions but surely short term traders can book profit. *This is what we mentioned yesterday: Tuesday Thirty bond lost more value and came down to 151 level. We recommend covering some more short positions on Wednesday. We are not recommending any buying. Hold positions in etfs.*

Longer term traders can keep adding TMV, TBT and TTT. Medium and longer term traders can keep adding September and December put options in Thirty year. Build selling positions around 155. Last five days chart here:

This is what we mentioned on last Monday: *Thirty year was guided very well from 153. Our recommendations of selling at 172, 165 has done amazingly well. Also buying TMV and TBT performed amazingly well. On Monday Thirty year will trade mixed, so take the selling opportunity around 159 if it reaches there. Last week we*

recommended to cover 70% positions in thirty year, and you can hold 30% shorts which have been taken for the longer term.

This is what we mentioned on the 2nd of Feb: *Thirty year bond will just collapse without any news so watch closely. As mentioned last week that it is always a very difficult time for traders when any market is at a historic top or at a low. On Monday Thirty year may open higher but surely it will start moving down after the USA market opens. Sell around 172 (June contract) or the below mentioned higher side ranges.*

Buy call options of Jan 2016 and Jan 2017 in TBT, TMV.

Thursday trading range (June 2015 contract):

TREASURY BOND – 152-10 TO 150.19 (June contract)

SOFT COMMODITIES

As predicted softs traded positive again on Tuesday. Coffee and cotton went higher and sugar lost some value. Don't add any positions here but we will add more positions next week. We recommend keep adding more call options positions in cotton, sugar and coffee for the longer term

One can sell cocoa on rise on Thursday and avoid orange juice/lumber. This is what we mentioned Monday: *Negative astro cycle has ended in coffee, cotton and sugar during last week and now it is time to buy all these softs.*

We are also recommend covering all shorts in lumber and orange juice. Cocoa always trades independent, if coffee and sugar rise then cocoa will fall as mostly cocoa trades opposite.

On Monday we see a mixed trend in softs but buying is recommended at below mentioned lower level. In this week's newsletter we mentioned that we see some sudden weather related events taking place in most soft related regions so watch these areas closely.

Buy coffee around current levels, and we don't see it going below \$118. Buy sugar on Monday around \$12.75 and cotton around \$64.00 levels.

Thursday trading range: (July 2015 Contract)

COFFEE: \$136.75 TO \$132.80

COTTON: \$66.70 TO \$64.60

SUGAR: \$12.27 TO \$11.93

GRAINS

On Wednesday grains came down bit as expected. Buying should be done on Thursday on any weakness around lower sides. On Tuesday wheat, corn and soy prices gained value as predicted. At this stage one can keep building buying positions in all major grains. It look like that our short covering in grains during last week and buying in grains from this week may prove best trade for medium and longer term.

This is what we mentioned Tuesday: *Monday soy and meal lost value but soy oil gained big value. Wheat gained value and corn also bale to remain in green. Watch lower side ranges closely in soy though we are not recommending any buy yet but let's see soy holds \$920 or not because if its trade below \$20 then we may see \$880. We are not changing any predictions for grains what we stated Monday: Friday grains traded mix in the tight trading ranges. Now we can strongly recommend to start buying corn and wheat from Monday's lower side ranges though we have some concerns in metals and energy's trend which may put some pressure on commodities but buying grains and selling metals can be a great hedging trade.*

We don't see corn going below \$338, wheat \$455 and soy may hold \$920 levels. Among grains soy is not that favorite at this stage but still we are recommending covering all shorts in grains.

Cover all short positions in most of grains including soy and meal. One should take positions for the short, medium and longer term. One can buy call options. We are now predicted that the bear market which we predicted 18 months back has now officially ended.

This is what we mentioned two months back: *Avoid Soy products. We don't see soy going below \$930, wheat \$477 and corn \$330 so go aggressive if prices come to these levels.*

This is what we mentioned seven months back: *Don't buy any position at this stage but wait for the next week's newsletter for the right advice. Selling recommendations in soy around \$1550, wheat at \$730 have done very well and we targeted Soy to fall below \$1000 and wheat \$550. Both these lower side targets are closer to being fulfilled. Selling grains remained the best advice in 2014, yes gold and silver selling has also done well.*

Thursday's trading range (July 2015 contracts):

CORN: \$364.00 TO \$356.00

WHEAT: \$520.00 TO \$502.00

SOY: \$942.00 TO \$930.00

SOY MEAL: \$304.80 TO \$300.00

SOY OIL: \$35.19 TO \$34.31

ENERGY

On Wednesday oil prices traded negative, energy stocks also came down as predicted. Get ready to load up natural gas if its came down to \$2.53. Avoid oil, heating oil and RB Gas, also

one should hold short in energy stocks. Short term buying in oil should be done at \$57.00 level. Our view is turning very negative day by day so watch this predictions as many oil companies will lose 50 to 70% value in coming time.

This is what we mentioned yesterday: *Tuesday oil prices gain value and trading in the predicted ranges, also heating oil and RB Gas moved higher. Energy stocks traded mix to negative so they fail to put positive show on positive energy day which is bad sign for energy stocks.*

On Wednesday energy prices will remain mix but we strongly recommend selling in oil, heating oil and RB Gas on higher side.

This is what we mentioned yesterday and keep same kind of predictions for Tuesday: *Friday energy prices traded positive but energy stocks failed to perform well. Energy stocks traded negatively as predicted and natural gas lost value. On Monday we recommend trading in and out in oil, but one can take some selling in RB Gas and Heating oil. Sell more energy stocks on any rise.*

At this stage one can buy some positons in oil around \$57.00 and book profit around 63.00 level but one can hold selling in heating oil and RB gas as this will be good hedging trades.

Natural gas is also on our buying list but we would like to see what gas does once Mars changes its house. The month of July will be very positive for gas, and we recommend buying gas around \$2.53 at this stage with the higher side target of \$3.23.

Avoid energy stocks.

This is what we mentioned on last week Monday 27 April: *Oil and RB Gas are gaining strength but won't last for the longer term so avoid any aggressive buying or selling at this stage as oil heating oil, and RB gas will trade mixed on Monday.*

Our astro cycles are showing mixed results for energy. We are not recommending any shorts in energy but trading in and out will remain the best strategy at this stage. Natural gas has disappointed as it has been trading directionless so no trade is recommended in gas.

*Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level.*

This is what we mentioned on 5 March: *Monday was positive day for energy but energy stocks acted negatively, we recommend staying away from oil now. Book profit on Tuesday in oil those who bought positions around lower levels. Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors.*

On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.

Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.

This is what we mentioned on the 3rd of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.***

This is what we mentioned on the 23rd of December: ***Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.***

This is what we mentioned on the 11th of December: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned last Monday (5th of December): ***Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.***

On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.

Thursday's trading range (June 2015 contracts):

OIL: \$60.50 to \$58.50 July

NATURAL GAS: \$2.72 to \$2.59

HEATING OIL: \$1.9200 TO 1.8800

RB GAS: \$2.0770 TO \$2.0205

CURRENCIES

On Wednesday most of emerging market currencies traded negative against most of currencies and dollar lost value against most of frontline currencies. Thursday mix kind of trend is indicating in most of currencies but Thursday one should take USD positions against frontline currencies as we see late Thursday and Friday most of currencies will lose value against USD. This bull market is here to remain for the longer term.

On Thursday sell EURO, Australian dollar, Pound and Swiss Franc around higher side level mentioned here below.

Hold buying positions in emerging market currencies like Real and Indian Rupee, these both currencies should be on your radar. .

Japanese Yen will make new lows.

This is what we mentioned on last week Wednesday: *Tuesday US dollar moved sharply higher without any break, last eight trading days in USD have been amazing and we were able to call great selling in Euro around 1.14 and buying in USD at 93.00 level. We are still recommending holding positions in USD.*

Ten days back we recommended buy put option in June Euro strike price of 1.07 at 0.006 and today it closed at 0.046, this trade made seven time on investment.

Follow our put options in euro, currencies and Indexes close. Tomorrow one can buy S&P and NASDAQ call options which will provide you great returns in the next three weeks.

Don't short USD or don't buy Euro but one can book profit 65% in both these traders on Wednesday.

This is what we mentioned 23 April: *On Wednesday currencies traded both sides, emerging market currencies traded positive. At this stage currencies are trading directionless with without any clue so trading in and out will remain best strategy. Thursday profit booking will come in USD but we are not recommending any short in USD but surely one can trade in and out in all major currencies on daily basis, which may provide you great return.*

We don't see Euro holding above 1.1278 and don't see dollar Index going below 95.00 level in medium term so remember these figures.

The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.

Remember this what we mentioned on 5 March: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.

This is what we mentioned last Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2nd of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

This is what we mentioned in the month of May 2014: Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.

Thursday's trading range: **(June 2015 future contract)**

DOLLAR INDEX – 96.30 to 95.12

AUSTRALIAN DOLLAR – 0.7821 to 0.7721

CANADIAN DOLLAR – 0.8089 to 0.7990

BRITISH POUND – 1.5415 to 1.5287

EURO – 1.1330 to 1.1155

JAPANESE YEN – 0.8070 to 0.8000

SWISS FRANC – 1.0788 to 1.0659

RUPPEE – 64.15 to 63.84 (Spot)

RAND – 12.25 to 12.09 (Spot)

Thanks & God Bless, Mahendra Sharma,

This is a must have e-book for every institution, broker, trader and investor!
Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

2015 Financial Predictions www.mahendraprophecy.com

Below are a few important notes from the last two months Flashnews:

This is what we mentioned on the 14th of December: ***We are not changing our outlook on market because still all astro indications are positive, so I would like to wait for more 48 hours before we give clear indications. We still believe that S&P won't close below 1982 for three days in row, and if it does then surely that will be most negative news but happening of this is 1% chances.***

Members must remember that S&P is just a few percentage points away from an all-time high. Mentioned on the 30th of October: ***S&P is back to a few percent away from an all-time high and everyone is wondering whether it will break this new high and move towards 2130. We are aware that most of our members are still trusting and hoping that our target may get achieved by the end of this year. The market tuned around the previous week on Tuesday from 1813 and it has been moving higher non-stop. Short sellers are having nightmares because the market unexpectedly went higher against all odds.***

Commodities are struggling at this stage, except for grains which just bounced back from lows as expected. Energy. Metals and softs are hanging around at the same levels. Commodity stocks are also suffering and we are not expecting any great news at this stage for commodities because our astro indicators are not indicating any supportive sign.

This is what we mentioned on the 26th of October: ***Wednesday short term traders should book profit but one should buy back on lower side as if S&P holds 1918 level. On Monday we mentioned that S&P would rock if it trade two days above 1918 which may take S&P toward 2000 level.***

Late Wednesday evening we see some profit booking coming back.

This is what we mentioned on the 12th of October: ***Those who like to trade for longer period can buy market aggressively from 16 October. We still believe that S&P may close around 2130 by end of this year which means that strong rally can take place in market.***

This is what we mentioned on the 20th of August: ***Soft and grains remained mix, but metals and energy lost value. Era of 1995 to 2000 is back now*** because equity and USD is showing positivity and commodities are struggling.

Hold positions in stocks, avoid commodities, sell bond and one can start buying USD on weakness. Indexes should be in your buying list. Watch our predicted ranges closely, once again 1988 will be crucial level for S&P, 1282 for gold and USD 81.00.

From our book: From here to 15 August markets will trade mix, but surely many stocks will move higher. We will be releasing more five stocks in retirement account in today's stock report. In this year book "2014 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2014", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity.

This is what we mentioned on the 18th of May (two days before the market started rebounding, as we predicted a huge rally starting from the 21st of May in all major indexes): In short, time is running out for most analysts who have been predicting a fall or crash. Investors will miss the opportunity of buying; in fact, they will go in the red if they short stocks and indexes, so we warn these analysts to advise investors carefully. We see a huge move coming from the 21st of May and S&P will achieve 1955 from the current levels of 1870.

In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!

www.mahendraprophecy.com

Reading daily range: When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
