## Thursday's Flash News (unedited copy)

### Update outlook on gold and metals

Dear Members,

On Wednesday equity markets traded mix, some of Asian and European market remained bit negative. Gold made another high of 2017, base metals remained in green but DUST lost more value. Grains and softs gained small value and energy recovered from lows and close bit negative.

Currencies remained in mix directions and Thirty Year bond recovered value.

Wednesday was bit negative for markets but markets are holding value. **Next catalyst day is next Thursday.** According to our theory markets have achieved top and S&P can test 2337 but I don't recommend to take any risk. Hold and keep adding put options in market for September 2017 and I still believe that you will make fortune. In this week newsletter, we mentioned that it always very tough to hold any shorts when market is trading higher ranges. **In early 2000 and in 2007 many of our close people and members were saying that Mahendra, we shouldn't have sold market because markets were acting very strong. I believe in end results, if you don't tones of money in September put options then I will leave predicting about market trend. I trust my theory 100% and I know that astro cycle will be 100% right.**

Gold have been holding well, we are not recommending any shorts for the few more days but still our view is not bullish at all for gold, silver and base metals. Let see how many day gold remains above \$1239, silver \$17.97, palladium \$773.

Oil traded negative in Asia and Europe but bounce back from low. Oil will still fail to remain above \$54.78 and S&P is holding 2287 so let see how many days it trades above this level.

We recommend buying grains and softs on Thursday. Coffee and cotton is our favorite. Get ready to buy USD against frontline currencies,

After market MCHP moved 10% and IPHI 3%, and they shall move higher after market open.

#### Today's trade recommendations:

- Sell more copper and palladium
- Buy coffee if it holds \$142.00, and buy cotton if it hold \$75.00.
- Buy some aggressive positions in USD against Euro, Australian dollar and Franc.

<http://2017financialpredictions.com/>

**Here are the trading strategy and ranges for Thursday:**

**GOLD/SILVER/BASE METALS**

Money is pouring from all angle in metals due to every fund manager and website are recommending buying gold and metals. My members must be thinking that what kind of advice I provide them? Because gold have been rallied.

In December, we stated that there is astro support for gold at \$1125 level, and stated that gold would have touch time trading above \$1188 level, and \$1239 would be high for 2017. Gold broke \$1188 and today it close above \$1239 level. I know gold sentiment is very bullish at this stage, but still I am holding my sell recommendations.

On other hand, we are predicting negative trend for market is on the ways and dollar weakness, so why still I recommend members to stay sideline because weakness in market and dollar supports gold's.

I did astro study again, and let me tell you my final verdict:

From here gold can move up to \$1253 level, if any disaster happens then gold can test \$1278 level but **astro cycles are still showing gold going toward \$777 level**. Today, I don't know what will be the reason for this fall but because astro cycle are showing drastic sudden fall so I can't recommend buying for three to five move on higher sides. Maximum positivity can remain until 2 March 2017 so please plan according and I leave trading decisions on you.

Last year I sold gold and I recommended selling gold, I covered shorts at \$1125 and same I recommended to book profit. I have been buying put from \$1188 level and every \$10 move I am adding small positions. I am buying December 2017 put options.

On Thursday, previous and base metals will trade mix or both sides, **we still see minimum 30% fall in base metals, maximum 1% to 3% on higher side risk from current level in gold, silver and base metals**. Base metals van hold current value for the next seven trading days but after that they will start falling non-stop.

Early last many were very upset about BRZU buying recommendations as it kept moving down, now most of you are upset with DUST recommendations, we see DUST moving toward \$75.00 to \$100 in the 2017 so hold positions.

Gold will struggle to close above \$1239, so sell gold \$1239, silver \$17.97, palladium \$773, copper \$273 and DUST will hold \$25.00 level. **(Don't take leverage positions, otherwise it will be difficult to hold trade on any sharp move, plan PUT options in metals)**

This is small note from 3 October: *We are not recommending any buying in silver and platinum as well as metal stocks. Medium and longer term traders must hold shorts in gold, platinum and silver. **Gold trading below or closing below \$1295 will push toward first target \$1256, and silver from \$18.15 to \$16.75 level.** DUST is great buy so don't miss opportunity of buying on Tomorrow. Gold won't go above \$1348 level in any worst-case scenario.*

Remember this what we stated on 22 September: *Most of positive astro time have ended and **small positive astro combinations is there which will going to end on 1 October** and gold will enter in to **100% worst negative cycle from 1 November**. At this stage trade in and out and keep building longer put options in gold and we are sure you will make future in 2017 by remaining bearish in gold.*

*Every analyst on this planet is recommending buying gold except me. **Copper traded positive and stay long in copper, buying copper at \$205 was good call.** Sell more palladium and silver, stay sideline in platinum on Friday.*

Gold won't cross \$1348 level in coming many years, and down side is unlimited. Wait for 2017 and you will see magic or power of hidden astro waves. **Gold will struggle to move above \$1348 and silver \$20.28**; these are the selling levels in both these precious metals but remain as a day trader for this week.

Here what we mentioned for last week Wednesday 31 August: *Our view is not changing at all, so great buying opportunity in DUST at \$29.00 level, add some more put options in gold, silver, platinum, palladium and base metals. You can buy Oct put of \$ \$19.75 in silver at \$0.27, and gold \$1340 at \$13.00. We just bought DUST, and add more small put options of October. Mostly we recommend buying put in metals for Feb 2017. **Currently gold is trading \$1354, silver \$20.18, Platinum \$ 1103 and Palladium \$700.** As mentioned gold will have difficult time to hold above \$1348 level (spot price) so watch current value closely.*

This is what we mentioned on 11 August: **Higher side in gold can rise maximum \$15 from current level of \$1348 and lower side more than \$300 by end of February 2017. Sell more NUGT around \$178 and JNUG around \$320; these levels were the previous highs last month. Add more buying in DUST.**

**Thursday's trading range: (March 2017 contract):**

**GOLD: \$1247.20 to \$1232.00**

**SILVER: \$17.93 TO \$17.55**

**COPPER: \$269.20 TO \$263.30 selling is recommended higher side.**

**PALLADIUM: \$778.10 TO \$761.00**

**PLATINUM: \$1027.80 TO \$1008.50**

## INDEXES

On Wednesday markets traded very tight which indicates that on Thursday markets will trade mix or both sides. Trading in and out will be best strategy for Thursday. Any sharp upside move could be taken as selling opportunity, buy put options and don't trade with leverage trade.

We are still recommending selling European markets and stay long in **YINN and INDL**.

S&P has been hanging around 2287 level which is very crucial astro level, closing above for more three days could push S&P toward our ultimate level 2337. Keep adding put on rise but buy September Put options.

Every trader must hold **UVXY** traded, **by September UVXY will give you five to ten time returns.**

This is what we mentioned yesterday: *Last week USA market gained value, and S&P closed above 2287 level. European and the rest of world's markets also traded higher. This week will be a testing time. We are still recommending to hold sell positions in the market. Monday will be a testing time for the market when Jupiter gets retro from the morning sessions, so surely some selling pressure may come. On Monday, we are recommending selling in European and USA market at the higher side.*

*It is always very difficult to hold sell at the top and buy at the bottom because at both stages the market move makes the trader very nervous and at this stage sellers are feeling nervous.*

*This week the market shall achieve top and from here it shall start moving down. S&P will fail to remain above 2287 for three days. Selling is recommended in most of the markets on the higher sides. Once S&P closes below 2262 then we shall expect it to move towards 2233 level very quickly.*

This is what we mentioned 12 December: *Maximum higher side in S&P could be 2287, so start taking March 2017 put options without any fear.*

We are not changing what we stated Monday, 31 October: *On Monday, we are expecting markets to remain mixed or on both sides; watch 2117 astro level in S&P, we still don't see S&P remaining below 2117 for the next five days but a major astro support level is at 2088 level in the worst-case scenario. If S&P remain above 2117 can push S&P toward 2237 and maximum 2287, and around 2287 shall be selling level.*

**Thursdays trading ranges: (March 2017)**

**HONG KONG (cash) – 23391 to 23135**

**NIKKEI – 19038 TO 18873**

**NIFTY S&P (Spot) – 8800 TO 8731**

**Singapore Straits (Spot) – 3075 TO 3059**

**CAC – 4789 TO 4735**

**DAX – 11630 TO 11473**

**DEX EURO STOXX – 3255 – 3220**

**FTSE – 7164 TO 7088**

**FTSE/JSE (Cash) – 45587 to 45152**

**DOW e-mini – 20059 TO 19939**

**S&P e-mini – 2295.00 TO 2282.00**

**NASDAQ 100 e-mini – 5204.00 TO 5168.00**

**RUSSELL e-mini – 1365.25 TO 1344.00**

**VIX (Cash)- 13.01 to 12.34**

### **TREASURY BOND**

On Wednesday Thirty Year traded positive, it rebounded strongly from lower levels. It close above 153-00 level and we are sure most of you must have closed buying positions today. We are not recommending any shorts yet, but start building sell around 155-00 level in Thirty Year.

Thursday and Friday take small sell around higher sides.

Still stay away from any new buying in TMV, TTT, and TBT, and we are sure you must have **closed 100% long positions in TMV, TBT and TTT** and now soon buying opportunity will come.

This is what we mentioned 10 September: *Tuesday Thirty Year Bond gained value, and same indicating on Wednesday. Fed may leave rate decision sideline which can push bond toward 168/169. Rate hike may bring prices 162 level. Overall trend is negative so get ready to sell on any rise if FED refuse to hike.*

*In the last ten weeks' bond prices came down from 176 to 165 as predicted and our longer-term view is very negative so keep building sell positions on any rise.*

*By the end of this year we may see 162-25 and 157. Stay long in TTT, TBT and TMV.*

**Thursday's trading range (March 2017 contract):**

**TREASURY BOND – 154-02 TO 152-12**

### SOFT COMMODITIES

Our Wednesday softs traded mix, Thursday is buying time in coffee and cotton so don't miss opportunity. From 1 April, huge momentum will build in coffee and cotton, they shall move multi year high so weakness shall be taken as buying opportunity.

Stay away from rest of softs. Sugar will remain in green on Thursday. Cocoa, and Orange Juice will struggle. Selling lumber around higher side will provide profit in coming days.

Hold sugar with stop-loss 19.98 and book profit around \$20.98, coffee is a great buy at \$142, and cotton is a great buy around \$75.00 level. If cotton, coffee and sugar hold these prices than we may see 10% move in these softs.

**Thursday's trading range: (March 2017 Contract)**

**COFFEE: \$144.60 TO \$141.60 Buying recommended at \$112.50 and \$118.00**

**SUGAR: \$21.08 TO \$20.46 First bought at \$12.78 – Now book profit above \$19.98**

**COTTON: 75.98 TO 74.72 Buy recommended at \$65.00**

### GRAINS

On Wednesday grains traded positive as predicted, stay long in grains as positive trend will continue on Thursday as well. Buy soy meal and take small buying in soy oil on weakness.

Corn may move toward \$386, but that should be profit taking level. Soy could test once again \$1082 level but book profit. Hold positions in soy meal and soy oil.

Wheat will trade both sides.

This is what we stated on 4 November: *The down side in and Corn and soy will be limited or these grains will hold \$438, Soy \$955, Soy meal \$303.00, soy oil will hold \$34.00/33.00 and wheat \$393.*

Last week on the 9<sup>th</sup> of June, we stated - *Buying recommendations in soy and meal from November 2015 have done very well. Corn will struggle to move above \$451, Soy \$1211, and Soy meal \$435; these are the levels to sell.*

This is what we mentioned on the 2<sup>nd</sup> of March 2016: The lower side in Soy, soy oil, corn and wheat is limited from current levels, not more than 2%; but on the higher side we see 5-7% positive moves. **We don't see corn going below \$354, wheat \$455, soy \$845, Soy oil \$29.70 and soy meal \$260.**

**Thursday's trading range (March 2017 contracts):**

**CORN: \$374.00 TO \$365.00**

**WHEAT: \$434.00 TO \$425.00**

**SOY: \$1068.00 TO \$1054.00**

**SOY MEAL: \$345.70 TO \$337.20**

**SOY OIL: \$35.01 TO \$34.34**

**ENERGY**

On Wednesday oil went down sharply lower in Asian trading sessions but bounced back in USA market. Heating oil and RB Gas moved higher. Energy stocks regain from lower levels. ERX was recommended selling at \$43.00, and now get ready to add more sell if it reaches to \$38.00 level.

On Thursday oil prices will remain mix to positive, heating oil and RB Gas will follow oil. Natural gas will trade mix on Thursday.

Buy at lower level and must book profit around higher side will be best strategy in oil on Thursday. Higher side oil won't move above \$54.78 and lower side major astro support will be at \$49.88 level. If oil break \$49.88 then expect \$44.55 level which may start happening after middle of next week.

This is what we mentioned on 8 January - *Natural gas went down sharply as predicted and tested \$3.16 from \$3.83, and the volatile trend will continue in GAS so trade carefully. Oil will only be able to move higher if it closes above \$54.78 for three days which we don't see happening.*

*Energy stocks traded mixed. ERX is unable to move above \$43.00 and oil above \$54.78 which is not a good sign for the energy market.*

We are not changing any of the predictions we mentioned on the 3<sup>rd</sup> of June: Same kind of positive, RB GAS and heating oil also moved higher. Natural gas traded mix. ERX have been hanging around \$29.00 level and it must close above \$33.00 level to give bullish signal in energy stocks which we don't see at this stage moment.

Oil has been failing to close above \$48.88 level but same time it is not closing below 48.88 level as well. If oil closes above \$48.88 for three days, then the next price level of \$52.55 may get achieved. At this stage some selling is recommended around \$48.88 level and on the down

side the important level to buy is at \$44,55. Oil prices have gained almost 70% from \$27.71 which we called the perfect bottom for oil.

This is what we mentioned on the 2<sup>nd</sup> of February: Many are predicting oil remaining in the teen's, but we do not see oil going below \$27.71, so I hope those who are targeting \$21 are doing their research well. Higher side it will struggle to move above \$35.18 levels, and if it does than \$44.55 is next target with \$48.88 selling level.

Natural gas lost a lot of value from our recommended selling price of \$2.44. today it closed around \$2.03. One can start acquiring very small positions in natural gas around \$1.72 and below.

**A few past important predictions and levels for energy of the daily Flashnews are at the end of this letter.**

**Thursday's trading range (March 2017 contracts):**

**OIL: \$53.00 to \$51.25 March contract**

**NATURAL GAS: \$3.17 to \$3.06**

**HEATING OIL: \$1.6555 TO 1.6050**

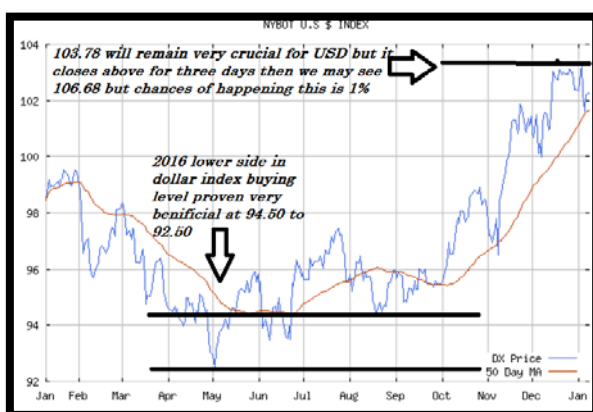

**RB GAS: \$1.5855 TO \$1.5205**

## CURRENCIES

On Wednesday currencies traded mix, Rupee made nice gain. On Thursday, we see strong rebound in US Dollar Index so don't miss opportunity of buying on weakness. Sell Euro, Franc and Australian dollar.

Canadian dollar and Japanese Yen will trade mix. Most emerging market currencies will lose value but Rupee will keep moving higher so stay long in Rupee and sell or book profit in emerging market currencies.

Dollar Index is ready to cross 101.55 level in this week, so cover all shorts in USD INDEX.

This is what we stated 4 January 2017: *We don't see dollar index going above 103.78 level so watch closely and closing below 102.55 will push dollar toward 101.55 level. Most of currencies gained nice value on Wednesday, emerging market currencies had best day.*

*On Thursday, most of currencies will trade both sides, buying is recommended on lower sides in most of currencies so don't miss opportunity.*

***Buy Pound, Yen, Australian dollar and Canadian dollar. Also buy Franc and Euro without fear.***

*Astro cycle changed late today on 3<sup>rd</sup> January so safe buying in all major currencies against USD.*

***Dollar closing below 102.75 will confirm that it would test the 101.55 level this week.***

A few of the past important predictions and levels for currencies of the daily Flashnews are at the end of this letter.

Thursday's trading range: (March futures)

DOLLAR INDEX – 100.68 to 99.92

AUSTRALIAN DOLLAR – 0.7670 to 0.7580

CANADIAN DOLLAR – 0.7642 to 0.7568

BRITISH POUND – 1.2599 to 1.2471

EURO – 1.0748 to 1.0661

JAPANESE YEN – 0.8984 to 0.8892

SWISS FRANC – 1.0115 to 1.0009

RUPEE – 67.11 to 66.78 (Spot)

RAND – 13.50 to 13.32 (Spot)

London	23:16	Rio de Janeiro	19:16	New York	18:16	Los Angeles	15:16	Sydney	8:16
Tokyo	7:16	Shanghai	6:16	Bangkok	5:16	New Delhi	3:46	Dubai	2:16

Thanks & God Bless, Mahendra Sharma

8 February 2017, 3.05 PM, Santa Barbara

**From markets sections of "2017 Financial Predictions" book, page 31/32:**

#### **FIRST CYCLE**

*From 1st January 2017 to 26th January 2017: During this cycle the US equity market will try to stay solid and trade quietly, but volatility will increase towards the end of this cycle.*

*We strongly recommend staying away from any long positions in the market from the 20th January 2017 as Obama astro will be replaced by Trump astro. Saturn will also be changing its Zodiac house at the end of this cycle on 26th January, so we expect an increase in*

*volatility.*

*In the last Thirty years, I have noticed that volatility always picks up when a major planetary change, retro, or reverse retro is about to take place. If you have some knowledge on how to read astro charts, they you must be aware that any planet changing its house, going retro, or reverse retro is always dangerous for the market as that is the time when there is some unexpected negative news that creates an uncertain environment in the market.*

*S&P will be saying goodbye to 2287 or maximum 2337 (if it closes above 2287 for three days) figure during this period. This will be the most interesting period for the US and the rest of the world because Mr. Trump will be taking his oath during this period. I am, and have always been very optimistic about the world, because nature created this planet for a reason, and the people will keep doing better as time advances, and each generation will continue*

improving upon the last. Having said that, if Mr. Trump's chart starts giving negative results then we may see some uncertainty coming in the market after he takes the oath.

We recommend investors to get out from any aggressive positions by the end of the second or by third week of January 2017.

The International market will also trade in a mixed but European market will be inching higher in to dangerous level so keep booking profit. The Sun will be in the second house from 14 January, the house of Saturn, **so we shall witness huge volatility after 19 January 2017.**

**From metal sections of "2017 Financial Predictions" book, page 72/73:**

**FIRST CYCLE**

From **1st January 2015 to 24th January 2017**: During this cycle, we see precious metals trading mix to bit positive, especially from the 2th of January, and prices will hold value or gold will gain some value from lower levels. This positivity will continue under Sun in Sagittarius, Sun will enter in Sagittarius on 15 December, and will exit on 14th of January and will rise in North, Hindus call this day "Makar-Sakranti" There will be strong astro support for gold at \$1125 level so watch this level closely.

Only short-term traders can take buying positive but medium and longer term trend is very negative for gold so we recommend selling in gold on any rise from middle of January. Base metals shall be trading mix to selling is recommended by the end of this cycle as negative time is coming from next cycle.

Sun will be changing house on 14 January could bring negativity for precious and base metals so watch this day closely and stay away or sell metals from 16 January though still volatility or volatile trend may continue till 24 January so keep this in mind. Those who want to trade safe, they can take selling in the last week of January 2017.

Metals stocks, HUI or DUST will trade with huge volatility on both sides.

**Some past important notes and important ranges from our daily flashnews:**

**From few past Flashnews - important commentary:**

**From softs commodities sections:**

This is what we mentioned on 12 December: *Cotton must trade two more day above \$72.00 level to confirm powerful bullish trend. Buy coffee around \$139 level. Get ready to buy sugar around 18.00 level, best level will be \$17.55. If cotton closes above \$72.00 for two days, then we may see \$78.00 to \$95.00 levels. Stay away from the rest of the softs. Cotton must hold \$68.55 level for bullish market to continue.*

*The cocoa short recommendation was the best trade of 2016; price of cocoa crashed from \$3300 to \$2160, cover all short in cocoa. Coffee traded sharply higher, it has been one of the best call because no one expected coffee to move this aggressively as good crop number and higher inventories. Coffee prices moved from \$120 to \$175 level, our maximum higher side target is \$178 level so now one can book 100% profit. Stay short in orange juice above \$221 and start covering shorts in cocoa around \$2500 and below because it fell 20% from our selling recommendations.*

This is what we mentioned last week Monday, 8 August: *Watch \$143 support level for coffee, coffee must hold this level and on the higher side coffee can move towards the astro resistance level of \$154. We are sure you must have booked profit in most of the softs (cotton at \$75,00, coffee \$154/178, sugar \$19.98/\$22.95, orange juice \$190/210, and cocoa \$3090), and now is the time to stay away.*

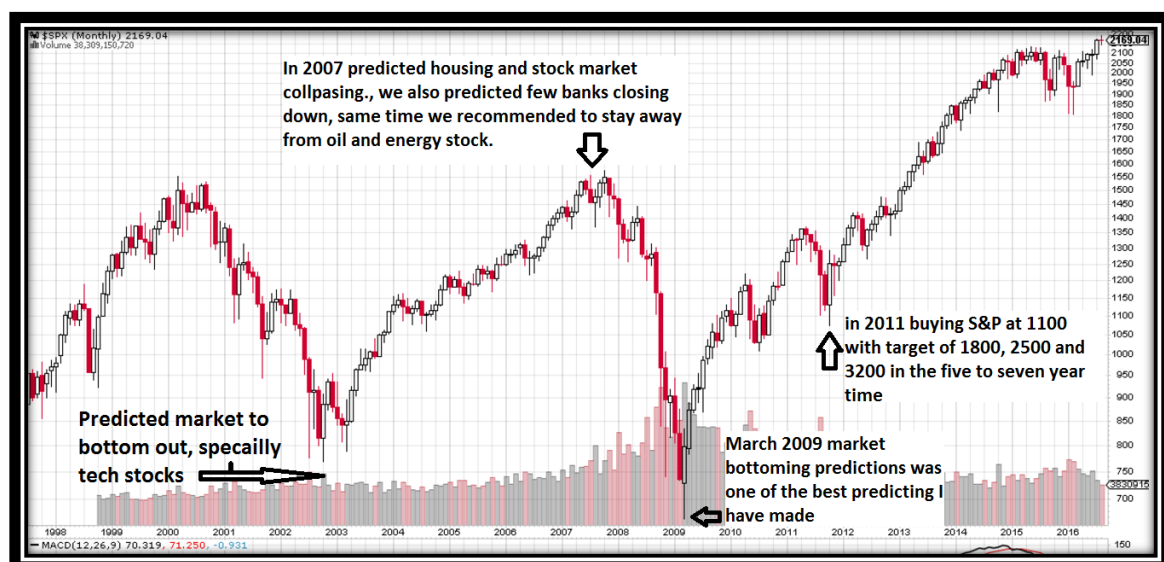

This is what we mentioned on the 26<sup>th</sup> of May: We strongly recommend staying away from any short positions as sugar prices may move towards \$17.65 level and that will be the level to take some short positions with stop-loss of 17.89 and if Sugar start trading above \$17.89 for 26 hours than we may see \$19.98 level. Coffee prices will hold value on the Down side so one can buy some positions in coffee on Monday. \$128 level will play the resistance level. On the other hand orange juice will move higher but we don't see it moving above 165.00 level so close all positions if you have any in Juice. Stay short in cocoa and buy coffee as prices will hold \$122 level.

Remember what we mentioned on February 2016 - Coffee will struggle to close above \$118 and \$128. The maximum down side is \$112 or \$109. One can start accumulating coffee with target of \$128. Cotton will struggle to close above \$64.88 and on the down side one can buy around \$57.50. Sugar selling is recommended at \$16.65 buying around \$12.78 to \$12.50 is recommended.

### From stock market sections:

This is what we mentioned on the 18<sup>th</sup> of Jan 2016: *On Friday the sharp fall in all the major global markets created so much panic and dented every stock investors account. Fear was spreading and traders started dumping everything they were holding without trying to find out the reason behind what was happening. I received many emails, some saying that S&P will retest 1812, others said that S&P was going to move towards 1650, and many even targeted 1100, the price from where this entire rally started.*

*Let me admit that when I read all these emails, even my confidence was shaken and for the few seconds I thought "What is going to happen to most of my members who have been trusting my view and*

*making investments on my view?" There is no doubt that most of our followers accounts must have gone into the deep red.*

*After I started doubting my view for a few seconds I decided to check whether I was making any mistake in my reading of the astro cycles because if S&P goes to 1650 or 1100, many will lose a fortune. So, I started studying the market one more time to find out that if I was missing anything in my theory.*

*There is no doubt that till 21 January we don't have a positive view for the market but surely we never saw this kind of weakness in the market. This clearly says that after the 21<sup>st</sup> of January it will be the testing time for our theory. In our study, except for this current volatility we don't see anything that could bring a crash in this market.*

*Most of the global markets are very close to the lower side ranges in the books and the higher side from here is 20-30% for many of the markets. If this comes true, then surely most of our follower's will make a fortune. However, to make a fortune most of our members have to survive first without taking any more damage to their accounts.*

### **INDEXES:**

*This is what we mentioned on Tuesday, the 25<sup>th</sup> of January: Monday the market witnessed profit booking and Tuesday will be one of the best days to add more positions in the market around the lower side without any fear because after making Wednesdays low (What we are taking as 2016's low), Tuesday's low will be the second higher low of 2016.*

*All the major markets are ready for a monster rally so this will be one of the best time to make money for the short term. Buy quality stocks, indexes and short term calls and we are sure that you will be rewarded handsomely by Friday. Within the next six weeks you will be way ahead.*

*Tuesday will be a great time to acquire positions in the emerging markets as well as in the European markets. If what we are seeing happens then S&P should move towards 1936 or even higher and down side, it won't go below 1844 or it won't close below 1862 level.*

*On last week Thursday and Friday S&P closed higher and finally settled at 1901 levels. Those who have been following our works for decades must know how important our astro support and resistance levels are. Last year also the lower side astro resistance was 1827, and the higher side 2088. Both these levels played a very important role for the market. So far the support level of 1821 played an important role on Wednesday and we are hopeful that S&P won't go below this level in the year 2016 and that the astro support and resistance levels continue playing an important role.*

*If we are not making a mistake in our reading of the astro cycles, then the negative time cycle for most of the financial markets has ended. Now is a great time to make money because the bullish cycle has already started from most of the equity markets.*

*This is what we mentioned the 18<sup>th</sup> of Jan 2016: On Friday investors experienced a nightmare. It was day that no investor likes to see because on this kind of day the trading accounts of longer term investors are always deep in the red. In 2000 when the tech stocks crashed we never recommended any buying to investors because the astro cycle was negative for two years and it was clear that the market may remain down for the next two years. In 2008 crash which we predicted, we were also aware that the market would rebound from the 26<sup>th</sup> of February 2009. We recommended that the market would bottom out on the 6<sup>th</sup> of March 2009 and that investors should start accumulating stocks keeping in mind that they have to hold them for five years and that they would make a fortune. We*

*strongly recommended, not to focus on the daily volatility and keep busy accumulating quality stocks. This proved to be very accurate advice.*

This is what we mentioned Monday 8 August: Billions of dollars follow our predictions closely so some support always comes around our predicted levels. 12<sup>th</sup> February 2016, S&P moved more than 360 points rally which no one expected.

This is what we mentioned on the 29<sup>th</sup> of February: At this stage we are expecting that the Indian market will perform, so this is a great time for international investors to put money in the US market as Rupee is at a historic low and the market has already corrected 26% from higher levels. Brazil and China have also performed negatively and it looks like a big turnaround is on the way from this week. It is time to build some aggressive positions in **BRZU at \$9.30, YINN \$10.65, and INDL \$8.40**. We recommended buying these ETF's before at higher levels and we are still recommending holding on to old positions and adding more positions at current levels. Watch emerging market currencies because any turn around in **Brazilian Real can push BRZU toward \$39.00 from 9.30**. S&P closed above 1938 and if it closes above 1938 for more than two days then expect it to move towards 1988 during this week or next week.

Two weeks ago we predicted that 1864 is a great buying level with the first target of 1938 and 1988. The first target got achieved very quickly and the second target will get achieved soon and after that our most important astro resistance level will be 2088, which has played a crucial role in keeping the bull away to move above 2088 for the last 16 months.

## **Energy:**

*This is what we mentioned in our book "2016 financial Predictions" in oil sections:*

**IMPORTANT NOTE:** As most of you are aware our view for energy has been very negative since June 2014. The overall trend in energy prices will remain negative so we do not recommend adopting long term positions. This means that do not take any trades earlier in the year and continue holding them for the rest of the year, because the higher side in oil will remain limited. There will be better opportunities to make money by trading in and out. Heating oil and RB gas will follow oils trend, so during this year we may see oil moving towards \$48.50 or \$52.95, and on the down side it may hold \$34.55. If it closes below \$35.55 for three days then there are chances that oil prices could fall towards \$29.65. Traders should take advantage of buying short term call options before any of the above-mentioned cycles start, and also book profit quickly before the positive cycles end.

Energy stocks will trade mixed without any major movement, so longer term investors should not be putting any money in energy stocks. Any sharp rise should be taken as a profit booking opportunity if you are holding any energy stocks.

Natural Gas' trend will remain positive during 2016, so one can stay long in Natural Gas in the year 2016. However, it is very important to remember to keep booking profit before any of the above mentioned negative cycles start. Overall, Natural Gas will outperform oil in the year 2016.

For short term strategies and price targets please follow our weekly and daily newsletters.

### **Ninth Cycle:**

From the **26th of November to 31st of December 2016** - During this cycle we see positive momentum coming back in the energy market and oil prices will form a bottom, and oil stocks will also act positively. Even though this is a positive cycle, the higher side will remain limited. Natural gas and RB gas will move sharply higher during this period.

### **Energy trading ranges for 2016:**

**Crude Oil: \$52.95 to \$29.78** (As predicted last year that oil may hold \$30.00 level and if its trade below for five days then possibility that could test 2002 low of \$27.78 level)

**Natural Gas: \$2.88 to \$1.82 (higher side \$3.57 if it cross \$2.88)**

Look at accuracy level about oil what we predicted in the book.

This is what we stated Monday, 31 Oct 2016: *Friday oil, heating oil and RB Gas traded negative as predicted. Energy stocks also went down but gas traded mixed. On Monday, oil will trade negative; stay sidelined or those who are holding shorts can continue holding and cover some around \$47.50. If oil starts trading below this, then expect \$46.75 to \$44.88 level, cover all shorts at \$44.55 level. Heating oil and RB Gas will trade negative or will follow oil. On the higher side, oil will struggle to remain above \$49.88 level which is the most important astro resistance level.*

*Natural gas will trade on both sides without any clear directions so avoid trading but on the lower side one can buy GAS for Tuesday. Don't touch energy stocks as they will keep struggling.*

This is what we mentioned on for Friday 2 Sep 2016: *On Thursday oil, heating oil and RB Gas prices went down sharply lower and weakness will continue Friday. One can cover 50 to 70% shorts around \$42.61 level in oil and 100% around \$41.78, so one can cover positions in heating oil and RB Gas on Friday.*

This is what we mentioned Monday, the 21<sup>st</sup> of December 2015: *Last week energy traders remained very nervous as they felt like abandoned by the bigger financial institutions and other large energy investors, but the truth is that every energy trader or investor is badly stuck energy trades.*

*In 2008 we predicted a crash in oil from \$145 and in 2009 we predicted that it had bottomed out at \$33.00 level. That prediction provided great returns those who invested in oil and energy stocks. Now once again after the prediction of oil falling in 2014, since the last two weeks we have been predicting that oil would form a bottom around \$34.55 level so watch this prediction closely. I am not saying that oil won't fall below \$34.55 level but surely those who will buy around this level may be rewarded handsomely.*

*Maximum fearful days: According to the current astro cycle we see another 12 volatile or fearful trading days are pending but the down side is limited.*

This is what we mentioned on the 27<sup>th</sup> of August 2015: *If oil trades below \$47.00 for two days then there are chances it could retest our magic support figure of \$44.55. If it starts trading below \$44.55 then next level \$38.50 so avoid buying positions.*

*We are not recommending any buying in heating oil and RB gas, also one should avoid buying any energy stocks.*

This is what we mentioned on the 27<sup>th</sup> of April 2015: *Adopt trading in and out strategy in energy, **but don't take any shorts in oil, heating oil or RB Gas. Sell some energy stocks.** Energy stocks will trade mixed without any major move so one can get ready to sell energy stocks. Higher side it is possibility that oil may see \$63.80 level, if its hold \$57.00 level. Keep adding positions in Natural gas around \$2.55.*

This is what we mentioned on the 5<sup>th</sup> of March 2015: *Oil shouldn't break \$47.00 level this time, if it does then surely scary time is coming ahead for energy investors. On Down side oil will hold \$47 and on the higher it will have a difficult time crossing above \$55.78 so watch these levels closely.*

*Watch our higher side target \$55.78 to short and \$44.55 to aggressive buy. Stay away from energy stocks. Small support for oil is \$47.00. ERX won't be able to move above \$70.00 level, so selling is recommended in energy stocks when ERX reaches to \$70.00.*

This is what we mentioned on the 3<sup>rd</sup> of January: ***On our predicted lower side target of \$44.55 is coming closer so one can cover 100% short positions and may be buy very small trade but I won't be***

**buying as I would like dust to settle. RB Gas, heating oil and natural gas lost value as well on Monday. Don't buy RB Gas and heating oil but surely natural gas can be bought around \$2.71.**

This is what we mentioned on the 23<sup>rd</sup> of December: **Oil can only get lower if it close below \$54.40 for three days, if it does then it will hit \$45.20 but chances of happening this is very less.**

This is what we mentioned on the 11<sup>th</sup> of December 2014: *Wednesday our fear proven very true, we strongly recommend to stay away from oil. When oil broke \$92.88 we recommended sell oil and get out from all energy product, when it broke \$88.88 we predicted it is reaching toward \$64.20. Two weeks back we mentioned that if oil falls below \$64.20 then chances are that it may move toward \$57.80 level. Most important level will be \$54.40.*

This is what we mentioned on the 5<sup>th</sup> of December 2014: **Oil and other energy products lost more value on Friday as predicted. We are not recommending any buying in energy stocks, oil, RB gas and heating oil. Natural gain gained value from the lower levels on Friday as predicted.**

**On Monday the higher side will remain limited, and if oil closes below or trades below \$64.00 for more than seven hours then expect \$57.90 levels in the short term. Selling is recommended in energy and energy stocks on Monday. It looks like oil is getting ready to break \$60.00 so stay short or add selling on any fall.**

## Currencies:

We are not changing any predictions in currencies of what we mentioned on Monday, 31 October 2016: *Once again tested 99.00 level but then sharply came down from the middle of the trading sessions. We are still recommending to keep building positions in USD around 99.00 level. On Monday, we still recommend buying Euro and other currencies around the lower side, or selling USD around the higher side level. On the down side USD may hold 96.71 level so watch this level closely. Euro can move up to 1.1111 level in this week, so book profit if it goes there.*

*On late Monday, the Scorpio Moon will bring both sides volatility. On Wednesday, the FED will announce decisions and due to the Scorpio Moon traders will get confused. Trade light or just trade in and out in currencies but medium term traders can hold selling positions in USD.*

*Stay short in Yen but one can cover Japanese Yen as it may move towards 0.9525 to 0.9250 level at this stage.*

This is what we mentioned Monday on 29 August 2016: *We see Euro holding 1.1055 level and Pound 1.2925 level. We don't see it falling below 0.9410 level and on the higher side it will have a difficult time to move above 1.0198 level. For USD index 97.00 to 97.50 level will play the role of a Wall for dollar which dollar may not be able to breach at this stage, or maybe even for the next six weeks, and on the down side USD may test 92.50 level.*

This is what we mentioned last week on Monday, 25 July 2016: This is what we mentioned on Wednesday, the 13<sup>th</sup> of July: *Any rise shall be taken as selling opportunity in Yen, in the next two months we can 900 pips in Yen or it will easily come down to 0.9200 level very soon. We don't see Yen moving above 0.9878 level and in the worst case scenario 1.0000 will be maximum side.*

*Friday USD tested 97.50 level and this is an important level. Dollar may keep testing this level during this week. **We don't see Euro going below 1.0923 and Pound 1.2988 level.** Pound should be in you aggressive buying list until it holds this level.*

On Monday, the 11<sup>th</sup> of April 2016 we stated: *Last week USD traded negative, and lost value against most of currencies. There are still chances that USD may test 92.50 level so watch USD trend closely, and start taking positions at 92.50 level.*

*Emerging market currencies have done very well and it's time to close positions if you are short or medium term traders. Rupee won't fall much so don't short Rupee but surely Rand, Real, Peso and Rubble will lose some value from middle of Monday.*

*Australian won't hold above \$0.7725, Canadian dollar 0.7900, Euro 1.1475, Franc 1.0555, and Yen 0.9288 level.*

This is what we mentioned last Thursday: *Pound is ready for 1.4123 mark. Sell Pound and add more Swiss Franc sell.*

*We are not recommending any new short in Euro, surely one can acquire some positions in Euro for the short period of time.*

*Emerging market currencies are getting ready to for bottoms expect few won't be trust like Rand and Rubble. Wednesday we see many currencies gaining some value but stay away from Pound, Canadian and Franc as they can keep making new lows so hold positions with 3% more corrections.*

This is what we mentioned on the 22<sup>nd</sup> of December: *Euro will struggle to move above 1.1075 and may hold value 1.0725 so watch these both levels closely.*

This is what we mentioned on the 23<sup>rd</sup> of April 2015: *The Medium and longer term trend is still very positive for USD but for the short term a mix to bit weaker trend indicated. USD Index have achieved our target of 100 and now down side 95.00 or at worst case 90.00 level will be great buying.*

***Dollar is our longer term buying trade so we won't recommend shorting dollar, we recommend buying USD on any weakness. Euro higher side 300 pips and lower side more than 3000 pips. We don't see USD index going below 95.00 levels.***

Remember this what we mentioned on the 5<sup>th</sup> of March 2015: *Currency war has nothing to do with USD Friday USD gained value as predicted. Medium and longer term outlook is very positive. As stated dollar will have some difficulty crossing above 95.50 level for the short term but if dollar will break 95.50 then it may move towards 102.70 later this year. On the other hand euro will move towards 1.0730 to 1.0388. At this stage one should start covering all shorts in currency.*

*Sell Euro around 1.1730 to 1.1788 and Franc 1.0988.*

This is what we mentioned on the 15<sup>th</sup> of Jan 2015, Monday: *Most fund managers and market advisors are still analyzing the after effects of a rocking Swiss Franc on Swiss National Bank. I just finished one interview from Switzerland and they are too excited about Swiss Franc's move. Our view was very simple, we recommended that it will not be able to hold above 1.2270 level so if Franc moves to 1.2270 then it will be time to sell as it will going to go back to par levels.*

This is we mentioned on the 2<sup>nd</sup> of October: *On Thursday USD will trade mixed so we strongly recommend booking 100% profit in all short positions in euro, Pound, Franc, Yen and Australian dollar. Euro has moved down more than 1000 pips, Franc moved 750 pips, and Yen 4000 Pips. We will wait for few days before we put out a new strategy so wait for our weekly newsletter.*

Remember, this is what we mentioned in the month of July: *At this stage USD is trading in a positive direction without any break since the last three weeks. Finally, it is reaching a most crucial level because once it breaks 81.78 then the nonstop upside journey will start in USD. Also euro falling below 1.3355 level will bring huge corrections. I am waiting for USD to close above 81.78 because then USD will move like wild fire toward 87.88.*

**This is what we mentioned in the month of May (2014): Keep adding USD on any weaknesses on Tuesday or around 79.50. Sell Euro around 1.3988, and Swiss Franc around 1.1470. Emerging market currencies will trade a bit weaker or sideways from Tuesday. We strongly recommend taking some buying positions in USD around 79.50.**

*In this year book "2015 financial predictions" we predicted "final bear cycle in market from 27 July to 15 August 2015", yes Sun can bring some uncertainty but take this uncertainty as buying opportunity in same time in 2015 in the month of August.*

Watch 2088 level for S&P, as it is most tough astro resistance of 2015. In April when markets were falling, we predicted S&P won't go below 1825, and by the 15th of June, S&P would achieve 1932 to 1955 and 1988.

In our 2015 book we mentioned that commodities will have worst year of 2015, and so far precious metals, base metals, grains and softs have been struggling and they will keep moving down in the second half. Dollar will perform amazingly well in 2015 so hold positions and money in USD.

**Make wave of nature/astronomical cycle an integral part of your trading/Investment strategies!**

**Reading daily range:** When we predict a **weaker trend** it means prices can break lower side and they can trade below predicted lows. (You can cover short but don't buy extra at lower levels until our indicators give buy signal).

When we predict a **positive trend**, means daily price can break upside and they can trade higher than predicted price (you can book profit but don't short that market).
