Extreme weather pattern and food shortage

Dear Members,

The problem of Greece for the market is like a ghost; it keeps reappearing and interesting part that we are aware of this ghost in the back of our mind:

If one thinks seriously or logically than Greece doesn't play a substantial role in the world economy, neither does it play a large part in imports and exports or to the world GDP. This then brings me to my question, why does the financial community continuously bring Greece to center of everything. Whether Greece remains in the EURO zone or not, it doesn't make a difference in world financial market. However, it makes a difference for Greece and many countries in the EU who are struggling with debt problems.

The Greece problem has been there for the last three years. During the last three years sometimes the markets gave importance to the issue while other times they just ignored it. This call cycle or wave, and even problematic time if wave is positive everyone ignores negative news or give less important to these news. **Our wave of nature clearly says that once S&P reaches to 3200, cash in everything once S&P reaches there which we are expecting in the three years because the EU problem will blowout and at the same time China will take the whole worlds economy into deep waters. The interesting part will be that the world will forget to float and this will make the whole worlds economy sink.**

Our wave of nature cycle is clearly indicating this, but at this stage we don't have to worry about the problems that are going to start from 2015 onward. **At this stage we are in the most unique/exciting cycle and everyone must take advantage of this.**

I don't see the Greece problem will end completely the current bull rising cycle in stocks will go on continuously, so I don't recommend wasting money shorting the markets by buying puts and naked shorts in stocks.

THIS WEEK STRATEGY:

This week the Moon will be transiting from the house of **Scorpio from mid Tuesday to Thursday**. This transition will bring **huge volatility in all major markets**. Prices will move rapidly on both sides. Normally I don't recommend our members to trade aggressively on these days and I will advise same here so all finish pending work.

The moon has a direct relation with the mind, thus whenever the Moon is negative, it forces us to make wrong decisions. Therefore, I will advise members not to take any new decisions from late Tuesday to Thursday.

This week on Friday one should start building up long positions in metal, indexes and grains as we will see huge upwards move coming in commodities. Stocks will remain sideways until the end of February.

This week the Greece problem will remain in the spotlight and finally we will see Greece signing the bailout package during this week under the current negative Moon. As an reader of planetary movement I can predict if they sign deal in negative moon then eventually whole thing will collapse in longer term.

Climate and market:

This weekend I was reading wave cycles of wave of nature for world weather pattern and the unclear picture came up and it looks very dangerous. In the coming time there will be severe or extreme droughts, freezes and flooding in different parts of the world. Don't take this statement lightly as this can bring food crisis for more than 6 billion of the world population. Without food we can't imagine life. The problem with food is that there are time limitations as you can't store food for ten or twenty years like gold or silver. As a matter of fact, you can store other commodities for hundreds of years as they don't have an age, however the story is different for grains.

Just imagine how Starbuck will serve coffee without getting coffee beans from Brazil, or how any Bread company will make bread without wheat. I think the cycles are portraying a very negative period with negative weather patterns so get ready for that. Make sure you have six month to a years worth of food stored in your house from 2014 onwards as I see no rain or just a little amount of rain on our planet for a few years. This can shoot grains and soft commodities prices through the roof, or I can say mind blowing levels where people will sell their cars or gold jewelry to buy food.

After reading this above paragraph, many must be thinking that I talk like I live in a fantasy world, but I want to reconfirm that I am fully within my sense at this moment. I don't drink alcohol and neither do I live in a fantasy world. So far, many of the predictions we made at the

time when they were made, it looked like I was dreaming. When I used to tell people that the time is coming when silver will move \$2 to \$3 in a day, people never use to believe me. Two months ago when I was talking about S&P going to 1350, no one wanted to believe that. We have made hundreds of predictions in the past, which at the time of the predictions; people thought that it was not possible. However, so far, most of them have proven to be very accurate. I feel I am just messenger, I chosen to focus on financial market, if you want to make serious money then you have to be very focus, whatever message I am getting from “wave of nature” theory, you have to take them serious, don’t keep any doubt because by creating doubt, you create obstructive in between clear path.

This year grain will remain mixed but we will see some kind of warning sign. I strongly advise people to buy soft commodities like coffee, sugar and grains from the third week of March. Keep acquiring longer term call options in grains. If you ask me apart from silver which commodity will perform well? My answer will be grains! In the next five years Soy may reach to \$5000, corn \$2500 to \$3000, wheat \$3000 to \$4000 and coffee \$1200 \$2000 because there will a huge amount of shortage and most of the silos will be empty. Weather will damage crops for the three years. Government, Farmers and common man should get ready for this crises from 2014.

I think my book 2014/15 will be the most interesting one, because we have to find a way to survive.

Anyways, I am going too far at this stage, so let see what this week indicates for the world financial markets. Before I start writing I want to clarify that the flash news is clearly day trading advise, and Weekly newsletter is a service which will keep you aware about the markets and the coming trend. This is why we highly recommend this service and its premium service for those who want to remain focused on the longer term. Yes, we have been receiving many encouraging emails since we started the daily range because people love our daily targets. It is purely the subscribers choice but I highly recommend even day traders to read our weekly newsletter because without the weekly Newsletter, you won’t have clue where you are headed and in which direction,

This week newsletter from 13-17 February 2012

GOLD/SILVER

Last week silver remained in a tight trading range with gold and other metals. It looks like that silver wants to move up aggressively from here. This aggressive move will come any time from 22 February and by the end of February silver prices will move up ten to fifteen percent or once can say that silver prices can reach \$38.00.

This week I am not recommending any aggressive trade, but surely any sharp corrections should be taken as a buying opportunity. If you don't want to risk trading in the future market for short periods then buy May 2012 call strike price \$35.00, but buy this call on weakness. In the worst case scenario silver can go up to \$30.95 in 2012 so you know risk of the lower side when you trade in silver.

In our book we mentioned that in 2012 silvers low would be \$26.80 and gold, \$1550, and if prices reach there then one should buy them. These prices have already been achieved in early 2012 and now I don't see silver going back to \$26.80 in the 2012.

Our wave of nature cycle also indicates that silver will outperform gold by far, so put more of your investments in silver as compared to gold.

Our members shouldn't be shorting silver at any price for the next three months. This week's trend will be a bit uncertain but we still don't see silver going below \$32.50 and on the higher side \$34.55. Gold trading range will remain between \$1683 to \$1738.

On Monday gold and silver will remain in a tight trading range and may gain ground by the end of the day. On Tuesday the same story will take place but trend look bit weaker.

On Wednesday and Thursday once can expect high volatility and prices will move rapidly on both sides. Buy gold and silver on late Thursday or early Friday.

Note – Those who have deep pockets should acquire silver on weakness without fear because by the end of February silver will be much higher than the current prices.

Friday gold and silver will move up sharply.

Monday's trading range:

GOLD: \$1711 to \$1735

SILVER: \$33.99 TO \$33.19

BASE METALS

This week base metals will remain weaker, but there will be a huge amount of volatility so I don't recommend holding any positions in base metals during this week. I don't recommend shorting platinum, but surely one can book profit in other base metals.

Our longer term outlook is very bullish for copper, palladium and platinum. Soon copper will hit a historic high with palladium.

On Monday and Tuesday base metals will trade sideways. On Wednesday and Thursday they will trade a bit on the weaker side; and on Friday all base metals will move up sharply so acquire positions on late Thursday.

Monday's trading range:

COPPER: \$390 TO \$382

PALLADIUM: \$709 TO \$693

PLATINUM: \$1671 TO \$1650

STOCK MARKET

Last week S&P finally touched 1350 our long awaited target. In the October 2011 we predicted that S&P would reach 1350 very soon, and so this target has been achieved. Now our next target is 1409 and on the lower side S&P will hold 1308, so it looks like S&P's down side is very limited. **We still hold our predictions of S&P reaching 1600 in the year 2012, all European market will also go crazy. Canadian and Australian market will outperform of the world. My next three year target for Germany DAX is 15000, London FTSE 14000, Australian ASX 11000 and Canadian TSX 35000 and Indian Nifty 15000. Yes these targets looks very crazy to many. All my last fifteen years predictions they looked very crazy when I came out with targets but so far more 95% all predicted target got fulfilled.**

The strategy should be buy call options of 1360 when S&P goes to 1310. All the major world markets will be following S&P so just follow our S&P predictions. It doesn't matter which country's index you are trading.

On Monday and Tuesday S&P will trade on both sides, but on Wednesday and Thursday sharp rise should be taken as a profit booking opportunity. Friday indexes will remain in positivity.

I strongly recommend holding Uranium stocks, and hedging positions by buying small S&P puts and get out as soon as it reaches around 1310. If I am you then I won't make this trade because I won't take a trade for three percent target.

Australian and Canadian market looks like my next favorite after S&P. Both these markets will outperform all other markets. Canadian markets will walk neck to neck with S&P. Canadian investors will make fortune if they remain focused on their investment in uranium, silver and other mining stocks for the next three years.

Performance wise Canadian and Australian mining index will remain on the top position sector wise, in short during this week, on any weakness investors should be adding uranium stocks to their portfolio.

Here is Indexes range for Monday's:

AUSTRALIAN – 4261 to 4216

FTSE – 5824 TO 5759

NIKKEI – 8975 TO 8855

S&P – 1348.75 TO 1232

NIFTY – 5402 TO 5329

NASDAQ – 2559 TO 2529

HONG KONG - 20877 TO 20540

RUSSELL – 822 TO 807

CAC – 3391 TO 3343

DOW – 12818 TO 12719

DAX - 6750 TO 6632

COFFEE/COTTON

Coffee and cotton cycle is changing from this Thursday so don't miss the opportunity of buying in both of these soft commodities. I highly recommend one should start planning longer calls in coffee. The North Node moving from the house of Scorpio can damage coffee crops and you all must be aware that the supply is already very tight. The inventory is also at decades low and any news regarding crop damage can push coffee prices limit up for many days so all of you must have some call option positions in coffee.

On Monday Coffee prices will move bit higher but take profit booking opportunity as until Thursday price of coffee may go down, with cotton and the same will happen on Tuesday but later in the day some profit booking will come. On Wednesday and Thursday some uncertainty will come in the futures market.

Cotton prices should move up from Monday but to remain on the safe side I will recommend buying cotton on Thursday. Cotton will follow coffee's trend on the daily basis as mentioned above.

One should also watch JVA and GMCR. You can add both these stocks to your portfolio on Friday this week.

Monday's trading range:

COFFEE: \$218 TO \$212.30

COTTON: \$91.90 TO \$90.05

COCOA/SUGAR/ORNAGE JUICE

Orange juice fell as predicted from its high of \$225 to \$182 in the last three weeks. There is always a lot of money to be made if one can remain focused. One can take buying positions in orange juice around \$174.50 and book profit around \$193.90.

Cocoa will remain weaker so I don't recommend any buying position in cocoa. Stay away from cocoa for the during this week.

Sugar prices can move up during this week from Monday onwards. This will be only commodity which can move higher during this week. I recommend holding positions in sugar and avoid coffee and other soft commodities during this week.

Monday's trading range:

COCOA: \$2179 TO \$2121

SUGAR: \$24.98 TO \$24.23

ORNAGE JUICE: \$189 TO \$181

GRAINS

Get ready to get in grains. The best day will be late Thursday or Friday. From Monday to Thursday grains will remain sideways (corn and wheat but **soy can move up big because nature wave cycles give upside signal in Soy**). For the Medium and longer term we are bullish in grains but 2012's Astro chart is indicating that there will be a sharp rise and sharp corrections in all major grains so they will trade both sides.

If you are buying grains on Thursday then you should be holding positions for the next six trading days, mean until next Thursday.

During this week Soy bean will perform far better than wheat and corn, so those who want to trade safely should hedge buying Soy by selling wheat and corn. One can take this hedging trade even on Monday.

Monday's trading range:

CORN: \$635.5 TO \$625

SOY: \$1237 TO \$1221

WHEAT: \$637 TO \$624

SOY MEAL: \$322 TO \$316

RICE: \$13.83 TO \$13.59

SOY OIL: 53.12 TO \$52.32

OIL

This week oil will outperform all commodities so don't sell or short oil. Any weakness should be taken as a buying opportunity. On Monday and Tuesday buy oil at lower levels if you want to day trade. On Wednesday and Thursday there will be a huge amount of volatility. If S&P goes down then don't sell oil thinking that oil should also go down. **Mars is indicating that oil can reach \$104.15 during this week so no shorts apart from day trades.** Don't carry forward any selling position on to the next day.

The best trade of this week from Monday to Wednesday will be natural gas so don't miss the buying opportunity. On Thursday and Friday natural gas may move down.

Trading range for Monday;

OIL: \$99.83 to \$97.29

NATURAL GAS: \$2.45 to \$2.57

CURRENCIES

Our longer term outlook - In the last three newsletters I have been constantly saying that EURO future is very blink. Eventually, I don't even know if it will survive or only two or three countries will be just remain in EURO.

Yes, the shorter term trend of euro will remain sideways or follow the market sentiments. Those who are looking for safer investments for longer term should choose US assets and US Dollar. The Moon and the North Node combinations indicates that an important decision for and on Greece will be taken during this week and all major markets as well as currencies will move on both sides. Any positive news should be taken as selling opportunity. I will send an update as soon as I see any major turnarounds.

This week dollar will gain from late Monday to Thursday, and late Thursday and Friday dollar will trade weaker. The same applies for all other currencies. Lately our predictions on emerging markets currencies have been almost a 100% accurate. One can sell Indian Rupee and buy dollar and once again Rupee will move US Dollar 48.60.

There will be sharp corrections in Euro, Swiss and Australian dollar so take a selling opportunity on any rise on Monday in all these currencies. Buy March 2012 future contract of Dollar index around 78.80.

Monday's trading range is here:

DOLLAR INDEX – 78.83 to 79.38

EURO – 1.3279 to 1.3155

AUSTRALIAN DOLLAR – 1.0698 to 1.0587

CANADIAN DOLLAR – 1.0017 to 1.0079

BRITISH POUND – 1.5811 to 1.5687

JAPANESE YEN – 1.2917 to 1.2847

SWISS FRANC – 1.0987 to 1.0848

RUPPEE – 48.87 to 49.68

RAND – 7.54 to 7.68

We are now not taking any new personal client from here onward; those who are our personal client will remain with us until they want. From here anyone who like to become personal client they have to send some information's about themselves and once we approve then only one can become our personal client.

These all recommended stocks went up sharply in the last week. Hold these stocks - **PLUG, FUEL, FNMA, FMCC, ENER ZOLT, PLUG, FCEL and SATC**. In Indian market one should keep acquiring position in **Tata Global Tata coffee and Jubliant Food**. Only one company in uranium sector is available in India and that is **Varun Industry**, if this company is telling truth about what they talking then this stock should move up sharply.

Here ENER moved up from \$0.25 to \$1.50 in the last seven weeks and ZOLT from \$6.20 to \$14.30.

I highly recommend stock trader to subscribe Uranium newsletter as biggest bubble of history will be there. I reduced uranium newsletter subscription cost by almost 50%. Stocks from Uranium mining may move up between 500% to 5000% percent in the next five years (yes historic bubble is on the way).

Make wave of nature strategy an integral part of trading/Investment

Thanks & God Bless

Mahendra Sharma
